Despite some evidence for the effectiveness of homeopathy from large-scale observational studies [1–4], the question whether its clinical effects are completely due to placebo remains subject of scientific debate [5, 6]. The scepticism towards homeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7]. If everything wards homoeopathy mainly results from the lack of a general-mains subject of scientific debate [5, 6]. The scepticism towards homoeopathy mainly results from the lack of a generally accepted scientific rationale of its action [7].
