Editor's Note

The Medical College of Georgia is the only state health science university in Georgia. It has more than 70 neuroscientists at different schools. Research interests of faculty range from neural development, neurodegenerative diseases, stroke and neurological disorders, regenerative medicine, to cognitive and behavioral neuroscience. Neuroscience has been identified as an area of excellence for future development. A PhD program in Neuroscience has recently been approved by the Board of Regents. Neuroscience at The Medical College of Georgia is at an exciting moment. This special issue provides an opportunity to sample broad aspects of neuroscience at The Medical College of Georgia.
