Drug Dosage

The authors and the publisher have exerted every effort to ensure that drug selection and dosage set forth in this text are in accord with current recommendations and practice at the time of publication. However, in view of ongoing research, changes in government regulations, and the constant flow of information relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any change in indications and dosage and for added warnings and precautions. This is particularly important when the recommended agent is a new and/or infrequently employed drug.
Original Paper

Two Kinds of Cells in Grafts of Pituitary Pars intermedia and Their Probable Dependence on Dopamine
Iturriza, F.C ............................................. 1

Distribution and Partial Characterization of Immunoreactive Prolactin in the Rat Brain
Harlan, R.E.; Shivers, B.D.; Fox, S.R.; Kaplove, K.A.; Schachter, B.S.; Pfaff, D.W .................................. 7

A Subset of Neurons Containing Immunoreactive Prolactin Is a Target for Estrogen Regulation of Gene Expression in Rat Hypothalamus (with 1 color plate)
Shivers, B.D.; Harlan, R.E.; Pfaff, D.W .......................... 23

Receptive Female Rats Stimulate Norepinephrine Release from Olfactory Bulbs of Freely Behaving Male Rats
Dluzen, D.E.; Ramirez, V.D ........................................ 28

Epileptic but Not Psychogenic Seizures Are Accompanied by Simultaneous Elevation of Serum Pituitary Hormones and Cortisol Levels
Rao, M.L.; Stefan, H.; Bauer, J ........................................ 33

Corticosterone-Induced Responses in Rat Brain RNA Are Also Evoked in Hippocampus by Acute Vibratory Stress
Nichols, N.R.; Masters, J.N.; May, P.C.; de Vellis, J.; Finch, C.E .............................................................. 40

Hypothalamic-Hypophyseal Vascular Connections in the Fetal Sheep
Levidiotis, M.L.; Wintour, E.M.; McKinley, M.J.; Oldfield, B.J ................................................................. 47

Neuroanatomical Localization of Sex Steroid-Concentrating Cells in the Japanese Quail (Coturnix japonica): Autoradiography with [3H]-Testosterone, [3H]-Estradiol, and [3H]-Dihydrotestosterone
Watson, J.T.; Adkins-Regan, E ....................................... 51

Seasonal Modification of Ovine Pineal Function. I. Interaction of Gonadal Steroids and Sympathetic Innervation on β-Adrenoceptors
Maxwell, C.A.; Folders, A.; Saramuzzi, R.J.; Carter, N.B.; Downing, J.A .................................................... 65

Possible Involvement of Beta Endorphin (1-31) and Dynorphin (1-13) in the Central Hypotensive Mechanism of Action of Alpha Methyldopa
van Giersbergen, P.L.M.; Wiegant, V.M.; de Jong, W. .......................... 71

Role of Hypothalamic Catecholamines in the Regulation of Luteinizing Hormone and Prolactin Secretion in the Ewe during Seasonal Anestrus
Thiery, J.-C; Martin, G.B.; Tillet, Y.; Caldani, M.; Quentin, M.; Jamain, C; Ravault, J.-P .................................. 80

Effects of Ovariectomy on GnRH [RNA, proGnRH and GnRH Levels in the Preoptic Hypothalamus of the Female Rat
Kelly, M.J.; Garrett, J.; Boschi, M.A.; Roselli, C.E.; Douglass, J.; Adelman, J.P.; Ronneklev, O.K .................................. 88

Seasonal Modification of Ovine Pineal Function. I. Interaction of Gonadal Steroids and Sympathetic Innervation on β-Adrenoceptors
Maxwell, C.A.; Folders, A.; Saramuzzi, R.J.; Carter, N.B.; Downing, J.A .................................................... 65

Possible Involvement of Beta Endorphin (1-31) and Dynorphin (1-13) in the Central Hypotensive Mechanism of Action of Alpha Methyldopa
van Giersbergen, P.L.M.; Wiegant, V.M.; de Jong, W. .......................... 71

Role of Hypothalamic Catecholamines in the Regulation of Luteinizing Hormone and Prolactin Secretion in the Ewe during Seasonal Anestrus
Thiery, J.-C; Martin, G.B.; Tillet, Y.; Caldani, M.; Quentin, M.; Jamain, C; Ravault, J.-P .................................. 80

Effects of Ovariectomy on GnRH [RNA, proGnRH and GnRH Levels in the Preoptic Hypothalamus of the Female Rat
Kelly, M.J.; Garrett, J.; Boschi, M.A.; Roselli, C.E.; Douglass, J.; Adelman, J.P.; Ronneklev, O.K .................................. 88

Corticotropin-Releasing Factor Synapses within the Paraventricular Nucleus of the Hypothalamus

Adrenocorticotropic Hormone Released by Pituitary Cells from Ovine Fetuses and Lambs. Polymorphism and Bio logical Activity
Brieu, V.; Durand, P. 300

Distribution and Coexistence of the Corticotropin-Releasing Factor-, Neuropeptide-, Enkephalin-, Cholecystokinin-, Galanin-, and Vasoactive Intestinal Peptide/Peptide Histidine Isoleucine-Like Peptides in the Paraventricular Nucleus of the Hypothalamus
Ceccatelli, S.; Eriksson, M.; Hökfelt, T. 309

Role of Steroid 5α-Reductase Activity in Sexual Differentiation of the Guinea Pig
Connolly, P.B.; Resko, J.A. 324

Announcements 336
Fig. 2. Photomicrographs of three coronal sections of the medial basal hypothalamus from an overiectomized colchicine-treated rat injected with \( \text{\(^{3}H\)} \)-estradiol. Dorsal is towards the top. The sections were exposed to autoradiographic emulsion; following development, they were processed for immunocytochemistry and counterstained lightly with cresyl violet. A-C Cells are shown which contain IR prolactin (brown cytoplasmic stain). A subset of the IR prolactin cells, indicated by arrows, also showed nuclear retention of \( \text{\(^{3}H\)} \)-estradiol (grain accumulations in areas of emulsion apposing some cell nuclei). Other cells, indicated in B by arrowheads, were chemically unidentified. A, B Cells were photographed at the same magnification (scale bar 20 µm in B). C Cells were photographed at a higher magnification (scale bar 10 µm).
Fig. 1. Light microscopy picture of a 3-µm paraplast section of a coaggregate of gradient fractions 2 and 7-9 from adult female rats (ratio 1:1). Double immunolabeling with anti-S-100 serum (brown reaction product, following PAP staining with DAB) and anti-GH serum (blue reaction product, following alkaline-phosphatase staining with Fast blue). Note the follicle-like structure (f) entirely boarded by FS cells and the cytoplasmic extensions of FS cells (arrows). × 1,000.
