Further Section

Cytogenet Genome Res 1962;1:363-364

Subject Index

(Book reviews not included)

Abortions, repeated, chromosome abnormality associated with: 199

Animals:

Boa constrictor amarali (see snakes)

Bos taurus (see calves)

Bothrops jararaca (see snakes)

Calves (Bos taurus), possible germ cell chimeras among newborn dizygotic twin: 258

Chicken (Gallus domesticus), DNA replication patterns of the heterochromosomes in: 344

Elliotius lutescens, the chromosomes of: 180

Gallus domesticus (see chicken)

Hapalidae (see marmosets)

Horse, changes of somatic chromosomes of, in serial in vitro transfers: 291

Marmosets (Hapalidae), marrow chimerism in: 245

Mus musculus, X-autosome translocation in: 129

Snakes, South American (Boa constrictor amarali and Bothrops jararaca), karyotype studies of these two species: 305

Xenopus laevis, cytological confirmation of female heterogamety in: 217

Chimerism in germ cells of newborn dizygotic twin calves (Bos taurus): 258

Chromosomal disturbance in vitro (see Virus, Simian) Chromosome abnormality, familial associated with repeated abortions: 199

- analysis from capillary blood: 90
- breach at meiosis in the human male: 206
- chimeras (see chimism)
  - mosaic, 45-chromosome cell-line in chronic myeloid leukaemia: 97
  - normal karyotype; translocation mosaic: 206
- XX/XXX/XXYY in a human intersex: 258
- XY/XY in a 60 mm human fetus: 266

Chromosomes, aberrations induced in, by 3H labeled nucleosides: 65
- autosomal abnormalities in familial mongolism: 141
- abnormality, familial, associated with repeated abortion: 199
- extra, in two severely retarded sisters with malformations: 32
- 45-chromosome cell-line in chronic myeloid leukaemia: 97
- mosaic in a girl with some features of mongolism: 20
- autosomes in human oogenesis: 42
- 21, 21, abnormal length of in four patients with Marfan’s syndrome: 5
- 21/21 translocation in mongolism: 75
- X-autosome translocation in Mus musculus: 129
- various animals (see animals)
- sex, heterochromatic X in human cells and enhancement of secondary constrictions: 222
- in human oogenesis: 42
- X-autosome translocation on Mus musculus: 129
- XO, glucose-6-phosphate dehydrogenase deficiency in: 1
- XX/XXX/XXYY in a human intersex: 104
- XXXY in a male: 52
- XX/XY and sex chromatin positive cell distribution in a 60 mm human fetus: 266
- somatic of the horse, changes of in serial in vitro transfers: 291
- human, the sites and relative frequencies of secondary constrictions in: 325

Constrictions in chromosomes (see secondary constrictions)

Denver system, a critical essay on criteria proposed by: 180

Deoxyribonucleic acid, relationship between content of and the ploidy of human tumours: 13
- replication patterns of the heterochromosomes in Gallus domesticus: 344

Enzymic markers (see chromogenic reactions)

Familial chromosome abnormality associated with repeated abortion: 119

Fetus, human 60 mm, XY/XY and sex chromatin positive cell distribution in: 266

Glucose-6-phosphate dehydrogenase deficiency in an XO individual: 104

Heterochromatin, female, cytological confirmation of in Xenopus laevis: 217

Intersex (“true hermaphrodite”), human, with XX/XY/XXYY: 104

Klinefelter’s syndrome in same sibship with 21/21 translocation mongolism: 75

Langdon Down anomaly (see mongolism) Leukaemia, chronic myeloid, a case with a 45-chromosome cell-line in the blood: 97

Malformations, extra autosome in two severely retarded sisters with: 32

Marian’s syndrome, abnormal length of chromosomes 2 and 22 in four patients
