Subject Index

Anatomic and histopathologic study of two cases of O (13-15) trisomy: 258
Anatomical and cytological sex of a Saanen goat: 414

Animals:
Bos taurus: 135, 167, 203, 324
Bovine: 135, 167, 203, 324
Cat: 3
Felis domestica: 3
Funambulus pennantii (Wroughton): 342
Hamster, Chinese: 289
- Syrian: 97
Human: 34, 45, 62, 88, 132, 243, 348, 207, 289, 252, 258, 289, 334, 355, 394, 427 and 441
Marmoset: 384
Mesocricetus auratus: 97
Mouse: 59, 289, 295, 306
Potorous tridactylis apicalis: 19
Rat-kangaroo, Tasmanian: 19
Saanen goat: 60087
Squirrel, five striped, Indian: 342
Tamarinus nigrolalis: 384
Tortoiseshell cat: 3
 Autoradiography (see also DNA, replication patterns)
- of chromosomes in Cri du Chat syndrome: 347
Autosome(s) (see also chromosomes, autosomes)
- Barr bodies in relation to nuclear size: 62
Blood, chromosomal alterations of clonal type in irradiated leukemic mice: 228
Cell culture (see chromosomes and replication patterns) Chimerism, in a tortoiseshell cat: 3, hematopoietic in the marmoset: 384
Chromosomal alternations in blood and skin of a clonal type in leukemic man irradiated for lung carcinoma: 228
- autoradiography in Cri du Chat syndrome: 347
Chromosome (see also chromosomes)
- acrocentric, small, enlarged short arm of, in grandfather, mother and child, the latter with Down’s syndrome: 443, autosome, deletion of 18: 201
- 21 and reciprocal translocation in 13-15 group: 148
- unbalanced translocation of 13-15/18 associated with developmental retardation: 252
- chromosome, familial occurrence of: 112
- D-group, familial occurrence of: 112
- deletion (see deficiency)
- in human with Turner’s syndrome: 427
- translocation in twelve unrelated mongols: 34
- X chromosome (see also translocation) - translocated with X suppressing sex-linked variegation: 306 Chromosomes, autosomes (see also translocation) - abnormal D-chromosome, familial occurrence of: 45
- in male with Down’s syndrome: 443, 201
- 21 and reciprocal translocation in 13-15 group: 48
- unbalanced translocation of 13-15/18 associated with developmental retardation: 289, in hematopoietic chimerism in marmoset: 384
- in male with Turner’s syndrome: 427
- and Xg; evidence relating to from successive non-disjunction during meiosis: 355

Subject Index

of human thyroid tumors: 394
in meiosis in human male: 143
meiotic, air-drying method for, from mammalian testes: 289
of Saanen goat: 414
- of Tasmanian rat-kangaroo Potorous tridactylis apicalis: 19
- in triploid-diploid chimeric cat: 3
sex, in somatic cells of the Syrian hamster, DNA replication patterns of: 97
- replication patterns of, in bovine cell: 135
- sterile 46XX male: 207
- clinical and cytogenetical studies in gonadal dysgenesis and bearing on Turner’s syndrome: 355
- and Xg; evidence relating to from successive non-disjunction during meiosis: 355
Syndrome, *Cri du Chat*, autoradiography in: 347
- partial trisomy-deficiency syndrome resulting from a translocation: 81

**Technique:**
Air-drying method for meiotic preparations from mammalian testes: 289
- in twelve unrelated mongols: 34
- reciprocal, in mouse between X and autosome: 295
- in 13-15 group and trisomy 21: 48
- partial trisomy-deficiency syndrome resulting from: 81
- suppressing sex-linked variegation in mouse: 306
- unbalanced 12-15 18, associated with developmental retardation: 252

34 Cytogenet Genome Res 1964

**Subject Index**

Triploid-diploid chimerism in a tortoiseshell cat: 1
Trisomy, autosomal in the mouse: 139
- D1 (13-15) anatomic and histopathologic study in two cases of: 258
- deficiency syndrome, partial, resulting from a reciprocal translocation: 81
- and reciprocal translocation in 13-15 group: 48
- in Down’s syndrome with D/F translocation: 219

Tumors, thyroid, human, chromosomes of: 394
Turner’s syndrome, cause, clinical and cytogenetical studies in gonadal dysgenesis and bearing on: 355

Variegation, sex-linked suppressed by translocation in mouse: 306 Virus (see SV40)

Xg and successive non-disjunction in meiotic division of spermatogenesis: 334
