Subject Index

Alveolar theory, vitreous structure 5, 6
Autologous blood, intravitreous application 38, 39

Benzopurpine 4B, history of use 31
Biomicroscopy, vitreous imaging 13–15
Brilliant blue G (BBG)
  animal studies 111
  characteristics 33, 102, 103, 116, 118
  internal limiting membrane staining toxicity studies
  clinical studies
    pharmacological effects 121–123
    pilot study of membrane peeling 120, 121
  primate eye studies 119
  rat eyes
    intravitreous injection 118, 119
    subretinal injection 119
  osmolarity of solutions 116, 118
  retinal pigment epithelium effects
    transepithelial resistance studies 103, 104, 106, 107, 110, 111
  transmission electron microscopy studies 104, 108
Bromophenol blue (BPB)
  cell toxicity studies
    life-dead assay 145
    MTT assay 144, 145
  characteristics 33
  clinical staining of epiretinal membrane, vitreous, and lens capsule 147–150
  light-absorbing properties 144
  long-term toxicity studies
    histology 146, 147
    retinal ganglion cell count 147
  staining specificity evaluation 143, 144

Chicago blue (CB)
  cell toxicity studies
    life-dead assay 145
    MTT assay 144, 145
  clinical staining of epiretinal membrane and lens capsule 150, 151
  history of use 31
  light-absorbing properties 144
  long-term toxicity studies
    histology 146, 147
    retinal ganglion cell count 147
  staining specificity evaluation 143, 144

Chromovitrectomy
  historical perspective 32
  stain characteristics 32, 33
Collagen, vitreous composition 7, 8
Color contrast, dyes 7, 8

Dynamic light scattering (DLS), vitreous studies 23–25

E68 dye
  cell toxicity studies
    life-dead assay 145
    MTT assay 144, 145
  light-absorbing properties 144
  long-term toxicity studies
    histology 146, 147
    retinal ganglion cell count 147
  staining specificity evaluation 143, 144

Electroretinography (ERG)
  brilliant blue G studies 118
  indocyanine green toxicity studies 72, 73
  patent blue studies 110

Embryology
  internal limiting lamina 8, 9
  vitreous body 9–11
Enzyme-assisted vitrectomy, see Microplasmin-assisted vitrectomy

Epiretinal membrane (ERM)
- bromophenol blue staining 147–150
- Chicago blue staining 150, 151
- holes 115
- trypan blue staining 91, 93, 142

Evans blue, history of use 31

Fibrillar theory, vitreous structure 6

Fluorescein
- characteristics 32
- history of use 30, 31
- preoperative fluorescein angiography and vitreous cortex visualization during vitreoretinal surgery 40

Fluorometholone, characteristics 33

Hyaluronan, vitreous composition 7, 8

India ink, history of use 30, 31

Indocyanine green (ICG)
- characteristics 32, 44, 69
- history of use 2, 44, 70
- internal limiting membrane changes after staining
  - biomechanical effects
  - measurements 84
  - statistical evaluation 84
  - ultimate elongation 85, 86
  - ultimate force 85, 86
- illumination and spectroscopy 84, 85, 87
- overview 82, 83
- specimen preparation 83
- staining protocol 83
- thickness measurements 84, 85
- treatment groups 83
- osmolarity of solutions 116
- photooxidative damage 87
- retinal toxicity
  - adverse events in internal limiting membrane peeling 77, 78
  - animal studies of intravitreal injection rabbit 73
  - rat 72, 73
  - ex vivo models 74–76
  - in vitro studies 71, 72
  - overview 45, 59
  - postmortem findings 70, 71
  - subretinal injection in rabbit 75

Methylene blue, history of use 31

Microplasmin-assisted vitrectomy
- development 155–157
- prospects 157
- rationale 153–155
- MTT assay, dye toxicity evaluation 144, 145

Microplasmin-assisted vitrectomy and internal limiting membrane staining in cat 74

Safety parameters in vitreoretinal surgery
- clinical experience 46–51
- dye persistence effects 51–54
- exposure time 50, 51
- osmolarity effects 58–60
- phototoxicity and illumination time 54–57, 60
- preclinical data interpretation 46
- protocol establishment 45
- solution preparation 69
- structure 44, 70

Internal limiting lamina (ILL)
- embryology 8, 9
- neovascularization 9

Internal limiting membrane (ILM)
- anatomy 82
- brilliant blue G staining 111, 116, 118
- cross-linking 89
- function 115
- peeling in macular surgery 37, 77, 120, 121, 141
- triamcinolone in visualization 40
- trypan blue staining 91, 93, 94

Interphotoreceptor matrix (IPM), vital staining 131, 132

Kiton fast green V, history of use 30

Kroll, Peter (vitreoretinal surgeon) 1–3

Lamellar theory, vitreous structure 6

Lens capsule
- bromophenol blue staining 147–150
- Chicago blue staining 150, 151

Light green SF yellowish (LG SF)
- cell toxicity studies
  - life-dead assay 145
  - MTT assay 144, 145
- light-absorbing properties 144
- long-term toxicity studies
  - histology 146, 147
  - retinal ganglion cell count 147
  - staining specificity evaluation 143, 144

Methylened blue, history of use 31

MTT assay, dye toxicity evaluation 144, 145
Nuclear magnetic resonance (NMR), vitreous studies 22

Ophthalmoscopy
conventional imaging 12, 13
scanning laser ophthalmoscopy 15, 16

Optical coherence tomography (OCT)
combined optical coherence tomography-scanning laser ophthalmoscopy 18–22
vitreous imaging 17

Patent blue (PB)
animal studies 109, 110
characteristics 33, 102
history of use 33
retinal pigment epithelium effects
transepithelial resistance studies 103–105, 108, 109
transmission electron microscopy studies 104, 108

Plasmin, see Microplasmin-assisted vitrectomy

Posterior vitreous detachment (PVD)
imaging 13, 16, 20, 21
induction of complete detachment, see Microplasmin-assisted vitrectomy

Proliferative diabetic vitreoretinopathy,
histology 11, 12

Purinergic receptor, brilliant blue G antagonism 121–123

PVD, see Posterior vitreous detachment

Radial sector theory, vitreous structure 6

Raman spectroscopy, vitreous studies 22, 23

Retina
brilliant blue G effects
transepithelial resistance studies 103, 104, 106, 107, 110, 111
transmission electron microscopy studies 104, 108

indocyanine green toxicity, see Indocyanine green

patent blue effects
transepithelial resistance studies 103–105, 108, 109
transmission electron microscopy studies 104, 108
retinal pigment epithelium structure 102

trypan blue
staining of breaks 94
toxicity, see Trypan blue

Retinal detachment surgery
outcomes 126, 127
vital staining
chromophore stains 128, 129
color contrast 134, 136
fluorophore stains 129, 130
historical perspective 127, 128
targets
dead cells 132, 133
interphotoreceptor matrix 131, 132
intracellular constituents 133, 134
retinal pigment epithelium 131
trypan blue 136–139

Rhodamine 6G
cell toxicity studies
life-dead assay 145
MTT assay 144, 145
light-absorbing properties 144
long-term toxicity studies
histology 146, 147
retinal ganglion cell count 147
staining specificity evaluation 143, 144

Rhodulirein blue 3G
cell toxicity studies
life-dead assay 145
MTT assay 144, 145
light-absorbing properties 144
long-term toxicity studies
histology 146, 147
retinal ganglion cell count 147
staining specificity evaluation 143, 144

Scanning laser ophthalmoscopy (SLO)
combined optical coherence tomography-scanning laser ophthalmoscopy 18–22
vitreous imaging 15, 16

Transepithelial resistance (TER)
brilliant blue G effects on retinal pigment epithelium 103, 104, 106, 107, 110, 111
patent blue effects on retinal pigment epithelium 103–105, 108, 109

Transmission electron microscopy (TEM)
brilliant blue G effects on retinal pigment epithelium 104, 108
patent blue effects on retinal pigment epithelium 104, 108

Triamcinolone
characteristics 33
history of use 39
Triamcinolone (continued)
  vitreous cortex visualization during vitreoretinal surgery 39, 40
Trypan blue (TB)
  applications 92, 93
  characteristics 32, 92
  chromovitrectomy use 93–95
  dilution in glucose 98
  epiretinal membrane staining 91, 93, 142
  history of use 31, 33, 91
  osmolarity of solutions 116
  retinal detachment surgery 136–139
  retinal toxicity
    animal studies 96, 97
    in vitro studies 95, 96
    staining specificity 91, 93, 94
  structure 92
Trypan red, history of use 31
Tyndall effect, biomicroscopy 13–15

Ultrasonography, vitreous imaging 16

Vitreous
  bromophenol blue staining 147–150
  collagen 7, 8
  dynamic light scattering 23–25
  embryology
    internal limiting lamina 8, 9
  vitreous body 9–11
  function 142
  history of study 5–7
  hyaluronan 7, 8
  imaging
    biocmicroscopy 13–15
    combined optical coherence tomography-scanning laser ophthalmoscopy 18–22
    in vitro 11, 12
    nuclear magnetic resonance 22
    ophthalmoscopy 12, 13
    optical coherence tomography 17
    Raman spectroscopy 22, 23
    scanning laser ophthalmoscopy 15, 16
    ultrasonography 16
    staining rationale 142
    structure 5, 6
    supramolecular organization 8
    trypan blue staining 94

Vitreous cortex
  visualization during vitreoretinal surgery
  autologous blood intravitreous application 38, 39
  preoperative fluorescein angiography 40
  triamcinolone acetonide 39, 40
  vitrectomy indications 35, 36, 41
