Preface

It is my pleasant duty to express my great and sincere gratitude to the Chief of the Institute, Professor Gösta Glimstedt, for having placed the resources of his institution at my disposal, for his friendly interest in my work, and for his unfailing readiness to discuss and help me with the problems encountered in these investigations. – My warm thanks are also due to Professor Gaston Backman for his courtesy in letting me use apparatuses and other material belonging to his department.

Docent Nils-Olof Abdon has helped me in many ways – with good advice and stimulating discussions of various problems, and most of all by putting his great store of knowledge of divers things at my disposal.

My personal friends have meant much to me in the course of this work. There has always been good fellow-ship and common interests, and I should like to use this possibility of expressing my gratitude to them – med. kand. Bengt Gustafsson, med. kand. Lennart Claesson, med. liæ Stig Tejning, med. kand. Hans Olvecrona, and med. kand. Sten Lagerstedt.

I am particularly indebted to fil. mag. Egon Hansson, who has designed and built most of the apparatus used in the present work and given valuable instruction in technical matters. Preparator Otto Mattson has always been ready to help me in various ways, and I tender him my cordial thanks.

I should like to thank especially warmly med. kand. Gunnell Pålsson for her invaluable help in drawing the pictures in the present work.

Miss Harriet Ohlsson has worked with me for many years, and I can safely say that her assistance has been of the greatest value to me. I offer her my deep gratitude.

The translation into English and the proof-reading has been carried out by fil. mag. Christina Hedström; my sincere thanks to her.
My warm thanks are due to the assistants of the University Library for their unfailing readiness to procure the necessary literature.

For economical support I beg to thank the Foundation Therese and Johan Anderssons Minne.

I wish to express my personal gratitude to my wife for her patient help during the work on this thesis.

Lund, April 1946,
Nils-Åke Hållarp

Introduction 7

CHAPTER I. Review of the literature 9
Summary 26
Problems treated in the present work 27

CHAPTER II. Technique and methods 28
A. Neurohistological technique and methods 28
Methylene blue staining 29
Stain solutions 29
Injection 30
Fixation and after-treatment of preparations 30
Substances used in the methylene blue stainings 31
Silver impregnations 32
Nissl substance staining 33

B. Nerve stimulation technique 33

CHAPTER III. Examination of the methylene blue technique employed 35
Standardization of the technique to obtain reproduceable results 35
Specificity of the methylene blue technique 37
Does the methylene blue technique give a true picture of the vital morphology? 39
Investigations into nervous degeneration by means of the methylene blue technique 43
Summary 51

CHAPTER IV. Construction of the ganglionic synapse 58
Nervous structures in normal ganglions 54
Nervous structures in the cranial cervical ganglion at de- and regeneration of its preganglionic nerves 60
Technique and methods 60
Degeneration of preganglionic nerves 60
Regeneration of preganglionic nerves 64
Discussion 66
Summary 69

CHAPTER V. Construction of the heterogeneous synapse 71
1. Vagus-sympathetic anastomoses 73
Technique 73
Results 74
2. Phrenic-sympathetic anastomoses 74
