Subject Index

Adenoviruses, polypeptide patterns 356-360
Antigenic determinants, hepatitis B virus 265-275
Avian sarcoma virus, transmission of double mutant markers by transfection 276-288
Baculovirus-like particle, persistent infection of insect cell line 309-317
B/C gene mutants of SV40, characterization 181-195
Caffeine, effect on replication of cytomegalovirus 241-253
Calicivirus group, relationship of San Miguel sea lion virus 51-59
Cervical biopsy, isolation of cytomegalovirus 115-119
Cesium salts, effect on dense poliovirus particles 329-337
Chimpanzees, transmission of non-A, non-B hepatitis 60-68
Complementation, between strains of red clover mottle virus 78-86
Coronaviridae, second report of ICTV Study Group 321-328
Counterimmunoelectrophoresis, discontinuous, for differentiating virus groups 102-114
Coxackievirus aggregates, in muscle cells 69-77
C-type RNA virus gp69/71, inhibition of XCsyncytia formation 338-344
Cytomegalovirus, effect of caffeine on replication 241-253
isolation from cell cultures derived from cervical biopsy 115-119
Cytoplasmic polyhedrosis virus from Heliothis armigera 351-355
Cytotoxicity, complement-dependent, for subtyping of herpes simplex virus 40-43
Deoxyribonucleoprotein, filamentous, nuclear accumulation during herpes simplex virus replication 289-299
Dexamethasone, effects on mutants of Rous sarcoma virus 1-10
Discontinuous counterimmunoelectrophoresis, for differentiating virus groups 102-114
DNA polymerase activity, hepatitis B core particles 254-264
Epstein-Barr virus –carrying lymphoma lines, decreased inducibility of early antigen induction 94-101
-, comparison with antigen-inducing ability of herpesvirus papio 153-164
--, inhibition of DNA metabolism in human B lymphocytes 125-131
Fc receptor, induced by herpes simplex virus 32-39
Feces, human, purification of hepatitis A virus 300-308
Genome, multicomponent, cytoplasmic polyhedrosis virus 351-355
HBsAg-specific antigenic determinants 265-275
Heliothis armigera, isolation of cytoplasmic polyhedrosis virus 351-355
Hepatitis
A virus, polypeptides 24-31
A virus, purification from human feces 300-308
B core particles, endogenous DNA polymerase activity 254-264
B surface antigen, preparation of cleavage fragments 265-275
B vaccine, efficacy in high-risk settings 196-208
362 Subject
- non-A, non-B, transmission in chimpanzees 60-68 Herpes simplex virus
- DNA, nuclear accumulation during replicative cycle 289-299
- DNA, synthesis and packaging 228-240
-, Fc receptor 32-39
-, subtyping by complement-dependent cytototoxicity 40-43 Herpesvirus -,-, Marek’s disease, characteristics of 11-23
morphology, structural subunit 318-320
papio, antigen-inducing ability 153-164 High multiplicity passage, herpes simplex
virus 228-240 Host RNA synthesis, inhibition in picornavirus-infected cell lines 209-220 Human B lymphocytes, inhibition of DNA
metabolism 125-131
Insect cell line, infected with baculovirus-like particle 309-317 Insulin inhibition of DNA synthesis in
transformed lymphoblastoid cell lines 345-350 Isoelectric focusing, paroviruses 87-93
Lymphoblastoid cell lines, decreased inducibility of early antigen induction 94-101
inhibition of DNA synthesis by insulin 345-350
Marek’s disease herpesvirus, characteristics of 11-23
Morphogenesis, Rous sarcoma virus 1-10
Morphology, herpesvirus, structural sub-unit 318-320
Mouse hepatitis virus, formation of pseudo-types 132-136
Murine type C RNA virus gp69/71, inhibition of XC syncytia formation 338-344
Muscle cells, presence of coxsackievirus aggregates 69-77
Non-A, non-B hepatitis transmission in chimpanzees 60-68
Index
Paramyxoviridae, ICTV Study Group report 137-152
Paroviruses, isoelectric focusing 87-93
Picornaviridae, second report of ICTV Study Group 165-180
Picornavirus-infected cell lines, inhibition of host RNA synthesis 209-220
Plant virus, red clover mottle, genetic complementation 78-86
Poliiovirus particles, effect of cesium salts 329-337
Polymyositis, presence of coxsackievirus aggregates in muscle cells 69-77
Polypeptide patterns, adenoviruses 356-360
Polypeptides, hepatitis A virus 24-31
Polyploidization, Epstein-Barr virus-carrying lymphoma lines 94-101
Pseudotype virions, mouse hepatitis virus with Friend leukemia virus 132-136
Red clover mottle virus, genetic complementation 78-86
Replication, cytomegalovirus, effect of caffeine 241-253
Replicative cycle, nuclear accumulation of herpes simplex virus DNA 289-299
RNA replicase, tobacco mosaic virus 221-227
RNA synthesis, inhibition in picornavirus-infected cell lines 209-220
Rous sarcoma virus, effects of dexametha-sone 1-10
San Miguel sea lion virus, relationship to
calicivirus group 51-59 Simian virus 40, B/C gene mutants 181-195 SV40 mutants, tumor induction in hamsters
120-124
Temperature-sensitive mutants, SV40 181–195
Tobacco mosaic virus, RNA replicase, effect of supraoptimal temperatures 221-227
Togavirus-like particles in nonhuman primates 44-50
Transfection, transmission of avian sarcoma virus double mutant markers 276-288
Subject Index
363
Tumor induction, hamsters infected with
SV40 mutants 120-124 Typing, herpes simplex virus 40-43
Vaccine, hepatitis B, efficacy in high-risk settings 196-208
Virions, pseudotype, mouse hepatitis virus with Friend leukemia virus 132-136
XC syncytia formation, inhibition by anti-MuLV gp69/71 antibodies 338-344
