Subject Index

Acebutolol 309
CNS uptake 309
lipid solubility 309
Ambulatory electrocardiography, assessment of therapeutic intervention 90
Amiodarone, chronotropic response during 40, 43
Angina pectoris, during exercise testing 286
Arrhythmias 30
ambulatory electrocardiography 69
classification 85
exercise testing evaluation 106
Flecainide 33, 36
functional capacity and 106
in ischemic population 83
nonischemic disease 88
Atrial pacing, nifedipine effect 190
Atrial septal defect, corrective surgery effect 48
ß-Blockade 208
central nervous system uptake 307
Blood pressure response 343
Cardiac NMR 162
Cardiac volumes, radionuclide ventriculography 255
reproducibility 255
Cardiokymography 112
Cardiomyopathy, radionuclide angiography 155
Catecholamines, urinary 2
Central venous pressure 174
Chagas’ disease 297
Computer analysis, exercise ST response 341, 343
Continuous electrocardiographic recording,
ventricular arrhythmias 30
Coronary artery disease
ambulatory electrocardiography 69
diastolic time intervals 296
exercise testing 105
radionuclide angiography 144
Coronary bypass surgery
left ventricular function after 247
survival 249
Diastolic time intervals 266
coronary artery disease 268, 269
normal subjects 268
Doppler echocardiography 129, 173, 174
Echocardiography 118
coronary artery disease evaluation 125
double-outlet left ventricle 54
exercise 112
image processing 127
in hypertension 2, 3
intraoperative 128
two-dimensional 122
Ejection fraction after nifedipine 195
variability 257
Electrophysiology, cardiac 199
Endocarditis, due to Haemophilus parainfluenzae 215
Enzymes, infarct size and 239
Exercise
maximal left ventricular performance and 145
ST response in healthy individuals 341
computer study 341
Exercise echocardiography 112
Exercise electrocardiography 125
computerized 107
Exercise testing 100, 185, 260
during amiodarone therapy 42
blood pressure response and 279
diastolic time intervals during 266
electrodynamic response 103
in hypertensive subjects 277
ischemia induced by 284
negative results 286
positive with pain 284
positive without pain 284
radionuclide ventriculography and 255
risk prediction 100 Exertional myocardial ischemia 284

Subject Index

357

Flecainide acetate, ventricular arrhythmia
suppression 33, 35, 36 Furosemide, hypertension 331

Haemophilus endocarditis 215 Heart failure
Doppler method for diagnosis 173
refractory, sulmazol 323
vasodilator therapy 194 Hemodynamics, borderline hypertension 331
hypertension exercise testing 277
hemodynamics, effect of furosemide 331 Hypertensive heart disease 277 Hypertrophy, left ventricular 1, 6, 9

Immunopathology, Chagas’ disease 277, 300 Infarct size, relation to pain in acute MI 239 Ischemic heart disease, physical training 207

Left ventricle, double-outlet 54 Left ventricular function 317
borderline hypertension 333, 334
after coronary bypass surgery 247
mitral valve disease 235, 236
nifedipine effect
ischemic 194, 195 normal 192, 193 Left ventricular mass
echocardiographic assessment 118
hypertension 9, 10 Normal ventricular mass
maximal exercise effect 145
ventricular septal defect 19, 180

Microarteriography 233
mitral valve disease 235, 237 Mitral valve disease 233
intramyocardial coronary arterial changes 235, 237 Myocardial infarction (MI)
acute infarct size 239
exercise testing after 284
exercise testing and 106 Myocardiopathy, chronic 297

Nifedipine, effect on left ventricular function 150 Noninvasive techniques
ambulatory electrocardiography 69
echocardiography 118
exercise testing 100
nuclear magnetic resonance 162 radionuclide angiography 136 Nuclear magnetic resonance (NMR) 162 imaging myocardial 165

Pacing, asynchronous ventricular, radionuclide
angiography 315 Paramagnetic imaging, NMR 168 PEP/LVET 207
after coronary bypass surgery 249
normal subjects 15 15, 18
survival after CABG 250 Physical training, ischemic heart disease 207, 209, 212 Plethysmography 266 Preexcitation, multiple pathways 20
Procaainamide 199 Propranolol
CNS uptake 307
lipid solubility 308 Proton NMR 162

Radionuclide angiography 136, 191, 255
during asynchronous ventricular pacing 315
effect of furosemide 331
indications 137
individual variability 257, 258
Radionuclide, first-pass 185
Right heart failure, diagnostic method 173
Right ventricular infarction, isolated 273, 275
Right ventricular rupture 273

Septal defects, atrial systolic time intervals 48
Sinus node function, during chronic amiodarone therapy 44
Sotalol
CNS uptake 307
lipid solubility 309
ST segment depression, during stress testing 277
in healthy individuals 341
Sudden death, continuous electrocardiography and 89
Sulmazol 323
Systolic time intervals 177
after coronary bypass surgery 249
atrial septal defect 48
after corrective surgery 49, 50
ß-blockade effect 208, 210
exercise testing and 114, 211
interinstitutional variation 13
normal values 15
ventricular septal defect 279
358
Subject Index

Treadmill exercise, ST response during 341
Tricuspid valve, endocarditis 215

Valvular heart disease, radionuclide angiography
149
Vasodilators, treatment for heart failure 184
Ventricular arrhythmias, suppression 33, 37
Ventricular pacing, radionuclide angiography during 315
Ventricular performance 48
atrial septal defect 48
left 50
Ventricular premature complexes, classification and grading 85
Ventricular septal defect corrective surgery 177
