Reference

We are writing in reference to the letter sent by Aguilar i Bascompte et al. with respect to our paper entitled: 'A New Family with Hereditary Choreo-Acanthocytosis', recently published in this journal [1]. It is unfortunate that the study could not be completed. Had it been continued, it would undoubtedly have contributed to a better understanding of this disease.

Incidentally, we would like to let you know that we inadvertently stated the value of the acanthocytes in table I (page 216) as a percentage. It should read acanthocytes per 1,000 (‰).

The normal value of the acanthocytes is < 5 ‰.

Thank you for your attention to these matters.
