Recent Articles

Recent Articles in Experimental Ageing Research

List No. 27, collected December 1978 to March 1979

As a regular feature of Gerontology, the editors publish a selection of recent articles in all fields of ageing research covered in the section on Experimental Gerontology by this journal, appearing in other journals in this field and in journals covered by the Life Sciences Edition of Current Contents. This selection does not intend to be complete, but to present articles which, in the opinion of the editors, will be of interest to our readers. The editors are responsible for the selection, and invite readers to bring to their attention articles which they think should be included in the next list.

The articles are ordered alphabetically by the first author under the following subject headings: (1) General, (2) Biochemistry, (3) Metabolism, (4) Cell Culture, (5) Physiology and Cell Biology, (6) Immunology, (7) Histology, Cytology and Comparative Anatomy, (8) Pharmacology, (9) Longevity, Populations and Genetics, (10) Plants and (11) Experimental Psychology and Behavioural Studies.
