Census and Taking-Over from the Point of View of Transfusion and Derivatives of Haemophiliacs from Oran and Its Area

M.B.		Mansour
M.		Benali

M.B. Mansour, Centre de Transfusion Sanguine, 73 Blvd.Benzerdjeb, Oran (Algeria)

Circumcision of a small boy in muslim countries is a reason for a bleeding event in the young haemophiliac.

About 20 haemophiliacs, 2 of which were adults, have been cared for in the Blood Transfusion Center of Oran. Fresh and compatible blood was rapidly available.

Often, however, there are difficulties in supplying the haemophiliacs with coagulation fractions due to the unreliability of the importation of these fractions (quantity and delay). Local production of cryoprecipitates would be a good solution.
