Preface and Acknowledgements

This special issue of *Folia Primatologica* was inspired by a symposium held at the XVIth Congress of the International Primatological Society/XIXth Conference of the American Society of Primatologists, hosted by The Wisconsin Regional Primate Research Centre in 1996. The symposium on 'The Evolution of Non-Maternal Care in Primates' brought together primatologists working on proximate, intermediate and ultimate causes of the evolution of non-maternal care in primates. The symposium included in-depth studies of particular taxa (Pat Wright and Sharon Gursky on tarsiers; Janice Chism on cercopithecines; Suzette Tardif on callitrichids), physiological correlates of non-maternal care (Toni Ziegler and Charles Snowden) and comparative analyses of life-history characteristics (Caroline Ross and Ann MacLarnon). Most of those who took part in the symposium have written papers for this volume and we have added three more papers. These additional papers look at hormonal correlates of non-maternal care in callitrichids (Mota and Sousa), the evolution of paternal care (Key and Aiello) and links between infant coat colour and non-maternal care (Ross and Regan).

We would like to thank all those who presented papers in 1996 for their help and to thank the hosts of the 1996 conference (members of The Wisconsin Regional Primate Research Centre) for organising a very enjoyable and stimulating meeting. The gestation period for this volume has been very long and we are very grateful to all the contributors, and to the editorial team at *Folia Primatologica* for their patience during the past three years. Production of this issue would not have been possible without the editorial assistance of Caroline Harcourt and the administrative skills of Penny Lees – many, many thanks to both of them. CR thanks the Royal Society for providing a grant to attend the 1996 conference and the providers of non-maternal care to her children (especially Phil Hicken and Wendy Ross), whose help allowed her to attend the conference and edit this volume.

Ann MacLarnon
Caroline Ross
