Creation of a ‘Club Francais de Telethermographie Clinique’
During the 2nd Dynamic Telethermography Seminary, held in Bordeaux, in May 1973, the ‘Club Francais de Telethermographie Clinique’ was created. It concerns a national work group which is affiliated with the European Thermographic Association. This Club is aiming to coordinate the efforts of French users of telethermography in clinical medicine and in applied research with, particularly, the adoption of a common language, the definition of common criteria for the analysis of results and their classification. This new Club will organize each year various meetings for the study of results of this still new discipline and a better definition of its limits and possibilities.

The temporary committee is formed with: Prof. Dr. T. Planiol (Tours), Prof. Dr. P. Marques (Toulouse), Prof. Dr. C. Lagarde (Bordeaux), Prof. Dr. J. M. Spitalier (Marseilles) and R. Amalric, MD (Marseilles).

For information and membership, please apply to: CFTTC, BP no. 1, 1338J Marseille Cedex 4 (France).
