Plate I
Fig. 1. A typical example of bilirubin deposition in the cerebellum of a 15-day-old jaundiced Gunn rat 24 h after bucolome treatment. Localized yellow staining is most apparent in the granule cell layer of the ventral part of the pyramis (Py) and the dorsal part of the uvula (Uv), and also in the deep nuclear region (DN). A highly pigmented noncerebellar brain part is the vestibular nuclear region (VN). Other explanations are given in the text. AL = Anterior lobe; De = declive; Tu = tuber; No = nodulus. For experimental details see ‘Materials and Methods’.
