Erratum
Figures 1 and 2 were reversed. The below represents the correct sequence of the two figures.

Fig. 1. Tracing of a laminagram of the larynx (lines A-B) during modal register phonation. References lines C separate the vocal folds (F) from the ventricular folds (V). Lines D-E are constructed parallel to the vertical reference line and form the lateral boundaries of the vocal folds. T indicates the trachea.

Fig. 2. Tracing of a laminagram of the larynx during pulse register phonation. Reference lines are the same as in figure 1.
