Papillomatosis of the Larynx

B.W.

Vettorato

Leiden

Author's address: Dr. B. W. Vettorato, Academisch Ziekenhuis, Leiden (Holland)

A. A survey is given of the experiences with 38 patients (25 adults and 13 children) suffering from papillomatosis of the larynx; the applied therapy is described. One very persistent case (a child) and one of malignant degeneration (an adult) are discussed more extensively.
