Prevention of Relapses and Complications after the First Attack of Otitis Media in Children

A.C.W.		Derks
--------	--	-------

After a short bacteriological introduction the author discusses the method of the a-septic anti-septic and antibiotic treatment of acute otitis media used in the E.N.T. clinic of the University Hospital at Leyden. He shows that the results of this method are excellent. The number of relapses and complications as well as the duration of illness decreased considerably. No chronic otitis was seen.
