From the E.N.T. Department (Head: Prof. Dr. H. A. E. van Dishoeck) University of Leiden

Authors' address: D.W. Odenthal, M.D. and E.H. Huizing, M.D., E.N.T. Department, Boerhaave Hospital, Leiden (Netherlands)

Serious auditory and vestibular impairment due to Plaquenil administration has been found in two patients suffering from rheumatoid arthritis. The necessity of regular audiological examination during administration of Plaquenil is stressed.

A detailed report will be published.
