A Case of Unilateral, Atypical Tuberculosis of the Parotid Gland

A.H.		van Bolhuis

From the E.N.T. Department of the University Hospital, Leyden

Author's address: A. H. van Bolhuis, M. D., E. N.T. Department, University Hospital, Leyden (Netherlands)

A swelling of the right parotid gland in a nine-year-old girl was discussed. Biopsies, saliva cultures and skin reactions revealed an isolated parotitis caused by Mycobacterium Scrophulaceum.

Will be published in full.
