Acknowledgments

This monograph is based on the article DCR Budapest, Diagnostic Criteria for Research in the Recognition and Identification of Functional Psychoses, published in the Hungarian periodical of neurology and psychiatry [Ideggyogyaszati Szemle 37: 102–131, 1984] under the authorship of Pethö, Ban, Kelemen, Ungvari, Karczag, Bitter and Tolna. For permission to use material from this publication thanks are due to the publisher, Ifjusagi Lapkiado Vallalat1.

The vocabulary used in the DCR is based on the 7th edition of Karl Jaspers’ General Psychopathology, translated from the original German by J. Hoenig and Marian W. Hamilton [Manchester University Press, Manchester 1963]; and the 5th edition of Karl Leonhard’s The Classification of Endogenous Psychoses, translated from the original German by R. Berman and edited by E. Robins [Irvington Publishers, New York 1979].

Definition of terms in the glossary of the DCR is primarily based on the 3rd edition of the AMDP System Manual for the Assessment and Documentation of Psychopathology, edited and translated from the original German by W. Guy and T.A. Ban [Springer, Berlin 1982]. For the permission to use definitions freely from their publication thanks are due to the editors, translators and publishers of this Manual.

Thanks are due to the publisher of Schizophrenia Bulletin for the permission to use material from the paper The Hourglass Model of Psychiatric Disease: The Endogenous Psychoses by B. Pethő [Schizophr. Bull. 10: 509–519, 1984]; and to the publisher of Psychopathology for the permission to use material from the paper Dimensional Assessment of the Course of Psychiatric Illness [Psychopathology 17: 110–116, 1984]. Thanks are due also to N. Rosenzweig for the permission to adapt quotations from his paper on Diagnosis and the Concept of Mental Illness [Am. J. soc. Psychiat. 2:47–50, 1982]. Many people, far more
than can be mentioned by name, have assisted in the preparation of this monograph. To all of them we are very grateful.

We are particularly indebted for the valuable suggestions of Drs. Jean-François Dreyfus, William Guy, Marc Hollender, Heinz Lehmann and Les Morey which undoubtedly improved the final presentation.

W. We would like to express our appreciation to Mrs. Mildred Harrington for her indefatigable help with the preparation of the material and for typing and retyping the manuscript from the first draft to final version.
