New Section: Highlights and Perspectives on Evolutionary Neuroscience

Evolutionary neuroscientists today present their work in such a wide variety of forums that it can be difficult to keep up with the most recent, intriguing developments. To help address this problem, *Brain, Behavior and Evolution* (*BBE*) will periodically publish a new section, entitled 'Highlights and Perspectives on Evolutionary Neuroscience'.

Content for this section will include short commentaries on papers that were recently published in *BBE* or elsewhere. If a commentary is critical of another paper, as it is in the present issue, then the target paper's original authors will be given the opportunity to publish a

brief reply in the same issue. Also welcome are other sorts of content, including commentaries of a more general nature, highlights of stimulating papers, and meeting reports. The main criterion for publication is that the contributions must be relatively brief (full review papers should be submitted as regular manuscripts) and of interest to a relatively broad section of *BBE*'s readership.

If you are interested in submitting such a paper or want to suggest other authors and topics, please contact the *BBE* editor. I look forward to hearing from you.

Georg Striedter, Editor-in-Chief
