Crone: Transplantation of Stenon’s duct to the conjunctival fornix in a case of closure of the ducts of the lacrimal gland following pemphigus of the conjunctiva.

Demonstrations of Apparatus

Crone: Double projection campimeter.
Bleeker: Stereo-X-ray photography (extraction of foreign body).
Oosterhuis: Fluorescein photography of the fundus.
De Haan: Histo-pathological preparations.
Horsten: Electroretinography.

Lecture on Colour Vision with Demonstrations
By R. A. Crone

N. New facts and old theories about colour vision are discussed. The significance of congenital disturbances at work, and in traffic on the road, the railway, at sea and in the air. The importance of acquired disturbances of colour vision in the diagnosis of eye diseases. Demonstration of experimental methods for the qualitative and quantitative estimation of the defect.
