Implantable Bone Conduction Hearing Aids
Advances in Oto-Rhino-Laryngology

Vol. 71

Series Editor

G. Randolph  Boston, Mass.
Implantable bone conduction hearing aids / volume editors, Martin Kompis, Marco-Domenico Caversaccio.

Inclucls bibliographical references and indexes.

Bibliographic Indices. This publication is listed in bibliographic services, including Current Contents®.

Disclaimer. The statements, opinions and data contained in this publication are solely those of the individual authors and contributors and not of the publisher and the editor(s). The appearance of advertisements in the book is not a warranty, endorsement, or approval of the products or services advertised or of their effectiveness, quality or safety. The publisher and the editor(s) disclaim responsibility for any injury to persons or property resulting from any ideas, methods, instructions or products referred to in the content or advertisements.

Drug Dosage. The authors and the publisher have exerted every effort to ensure that drug selection and dosage set forth in this text are in accord with current recommendations and practice at the time of publication. However, in view of ongoing research, changes in government regulations, and the constant flow of information relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any change in indications and dosage and for added warnings and precautions. This is particularly important when the recommended agent is a new and/or infrequently employed drug.

VII Preface
Kompis, M.; Caversaccio, M.-D. (Bern)

Introduction and Basics

1 Historical Background of Bone Conduction Hearing Devices and Bone Conduction Hearing Aids
Mudry, A. (Palo Alto, Calif./Lausanne); Tjellström, A. (Göteborg)

10 Acoustic and Physiologic Aspects of Bone Conduction Hearing
Stenfelt, S. (Linköping)

Overview over Different Systems

22 An Overview of Different Systems: The Bone-Anchored Hearing Aid

32 The Ponto Bone-Anchored Hearing System
Westerkull, P. (Askim)

41 Partially Implantable Bone Conduction Hearing Aids without a Percutaneous Abutment (Otomag): Technique and Preliminary Clinical Results
Siegert, R. (Recklinghausen)

Surgical Aspects

47 Surgery for the Bone-Anchored Hearing Aid
Arnold, A.; Caversaccio, M.-D. (Bern); Mudry, A. (Lausanne)

56 Paediatric Baha
McDermott, A.-L. (Birmingham); Sheehan, P. (Manchester)

63 Complications of Bone-Anchored Hearing Devices
Wazen, J.J.; Wycherly, B.; Daugherty, J. (Sarasota, Fla.)
Audiological Aspects

73 Audiological Results with Baha® in Conductive and Mixed Hearing Loss
Pfiffner, F.; Caversaccio, M.-D.; Kompis, M. (Bern)

84 Conductive Hearing Loss and Bone Conduction Devices: Restored Binaural Hearing?

92 Bone-Anchored Devices in Single-Sided Deafness
Stewart, C.M.; Clark, J.H.; Niparko, J.K. (Baltimore, Md.)

103 Factors Influencing the Decision for Baha in Unilateral Deafness: The Bern Benefit in Single-Sided Deafness Questionnaire
Kompis, M.; Pfiffner, F.; Krebs, M.; Caversaccio, M.-D. (Bern)

112 Challenges and Recent Developments in Sound Processing for Baha®
Flynn, M.C. (Göteborg)

Implantable and Nonimplantable Devices

124 Headbands, Testbands and Softbands in Preoperative Testing and Application of Bone-Anchored Devices in Adults and Children

132 Bone-Anchored Hearing Aids versus Conventional Hearing Aids
Banga, R.; Lawrence, R.; Reid, A.; McDermott, A.-L. (Birmingham)

Outlook

140 The Future of Bone Conduction Hearing Devices
Håkansson, B. (Göteborg)

153 Author Index
154 Subject Index
Since Anders Tjellström implanted and fitted the first patient with a bone-anchored hearing aid (Baha) in 1977, basic research and clinical work on implantable bone conduction hearing aids have advanced considerably. More adults and more children are implanted every year, up from only 3 in 1977 to a total of over 75,000 users today. An increasing number of centers all over the world offer implantable bone conduction hearing aids as one method of treatment. More knowledge is available than ever before. Better implants, more sophisticated signal processing and several designs from different manufacturers are available today.

Our aim was to bring together the most innovative, the most experienced, and the most renowned researchers and clinicians from all over the world to summarize current knowledge on implantable bone conduction hearing aids. Leading the center for implantable bone conduction hearing aids in Bern, which is the largest in Switzerland, we believe that this collection, which covers a wide range of relevant topics, will be useful for researchers and clinicians alike.

To meet this goal, this volume has been organized as follows. In Introduction and Basics, Anders Tjellström and Albert Mudry cover the history of bone conduction hearing devices, and Stefan Stenfelt gives an overview on acoustic and physiologic aspects of bone conduction hearing. The three following chapters describe three different systems which are available today. General surgical aspects are covered by a multicentered Swiss group of authors. Then, Ann-Louise McDermott from Birmingham and Jack J. Wazen from Sarasota, Fla., share their expertise on Baha in children and discuss complications of the procedure.

Different audiological aspects of implantable bone conduction hearing aids are covered in the next five chapters. Flurin Pfiffner reports on audiological results in different user groups in Bern, and the Nijmegen group summarizes current knowledge on binaural hearing with implantable bone conduction hearing aids. The group of John K. Niparko analyzes results of the growing number of patients who receive implantable bone conduction hearing aids because of their single-sided deafness, and our own group from Bern reports on the factors influencing the decision process in this group of patients and presents a new questionnaire. Mark Flynn from Cochlear, Inc., in Göteborg, Sweden, gives an update on digital signal processing for Baha.

A good knowledge of the alternatives to implantable bone conduction hearing aids is undoubtedly important, and therefore explored in the next two chapters. Andrzej Zarowski and colleagues from Antwerp explore headbands and softbands, and the Birmingham group compares different aspects of conventional hearing aids with implantable bone conduction hearing aids.

Make sure not to miss the very last chapter of this volume by Bo Håkansson on the future of...
bone conduction hearing aids; we promise a stimulating reading!

In a complex field such as implantable bone conduction hearing aids, manufacturers, clinicians and researchers contribute to successful development and the increasing patient benefit. In this volume, two chapters were contributed by researchers who are currently working for a manufacturer. Patrick Westerkull from Oticon, Inc., describes the Ponto system, and Mark Flynn from Cochlear has contributed an article on sound processing for Baha. Ralf Siegert, who reports on the Otomag system, describes himself as being close to the manufacturer.

We are very grateful for the high-quality chapters which have been contributed by experts from all over the world. We believe that this volume will be useful as a reference book for surgeons, audiologists, therapists, and people considering involvement with implantable bone conduction hearing aids. We hope you enjoy it.
