Abbreviated Profile of Hearing Aid Benefit (APHAB) 99
Air conduction hearing aid principles 133
single-sided deafness management 95
Audiant 8, 42, 141, 142
Audiphone 3, 5

Baha
advantages over bone conduction and conventional hearing aids
comfort 136, 137
cosmesis 137
fitting 137
quality of life 137
sound localization 136
sound quality 134, 136

audiological outcomes
bilateral conductive hearing loss 76–80
bilateral mixed hearing loss 76–80
overview 73, 74
sound processor comparison 79–82
speech understanding in noise 81, 82
study design 74, 75
unilateral conductive hearing loss 76–80
bands, see Headband; Soft band; Test band
Bern Benefit in Single-Sided Deafness
questionnaire in decision making 103–110
binaural hearing outcomes, see Binaural hearing, bone conduction devices
bone conduction physiology 23
children
complications 59, 60, 68, 69
indications 57
overview 25, 56
timing 57–59, 138

complications, see Complications, bone-anchored hearing devices
description 23, 24
disadvantages
osseointegration time 138
soft tissue complications 138
surgery 137, 138
trauma 138
historical perspective 22, 134
indications
bilateral mixed or conductive hearing loss 24
moderate mental retardation 25, 26
unilateral conductive hearing loss 24, 25, 47, 48
unilateral sensorineural hearing loss 25, 47, 48
postoperative care and follow-up 53
preoperative diagnostics 48
prospects 143, 151
satisfaction of patients 125
single-sided deafness outcomes, see Single-sided deafness, Baha outcomes
sound processors
bone conduction threshold measurement through processor 117, 118
dedicated hearing loss prescription 119, 120
direct bone conduction 120, 121
fitting 116, 117
high maximum power output 118, 119
multiple channel nonlinear amplification 118
signal cleaning
automatic feedback cancellation 116
directional microphones 114, 115
noise management circuits 115, 116
positional compensation 113, 114
types and performance 26–29, 79–82
surgery
alternative techniques
Subject Index 155

- linear incision 50, 51, 54
- rectangle flap 49
- round flap 49, 50
- closure 52, 53
- drilling and insertion of titanium screw 51, 52
- goals 26
- loading time 26
- preparation 48, 49
- technique 26, 49
- two-stage procedure 53
- test rod 126

Basilar membrane, bone conduction stimulation 11, 12, 23

BBSD, see Bern Benefit in Single-Sided Deafness questionnaire

BCI system, see Bone conduction implant system

BCI, see Bone conduction

Bern Benefit in Single-Sided Deafness questionnaire (BBSD), Baha implantation decision making 103–110

Binaural hearing, bone conduction devices
- cross-stimulation 84, 85
- directional hearing 87–90
- speech perception 87–89
- study design 85–87

Bone-anchored hearing aid, see Baha

Bone conduction (BC)
- air conduction sound comparison 11
- basilar membrane stimulation 11, 12, 23
- binaural bone conduction hearing and hearing aid implications 18, 19
- clinical measurements 10, 11
- hearing protection and attenuation 19
- own voice 18, 19
- principles of devices 133
- skull transmission of sound 15–17

sound pathways
- cochlear fluid inertia 14, 23
- cochlear space alteration 14, 15
- ear canal sound pressure and occlusion effect 12, 13
- middle ear ossicle inertia 13, 14
- transcranial transmission of sound 17, 18

Bone conduction implant (BCI) system
- Baha comparison 150, 151
- historical perspective 145, 146
- preclinical results 149, 150
- sound processor and induction link design 148, 149
- technical challenges 145

transducer
- design 147, 148
- placement and attachment 146, 147

BP100, Baha sound processing 27–29, 79–82, 112–116, 119, 120

Cochlear fluid inertia, bone conduction sound 14, 23

Compact, Baha sound processing 79–82

Complications, bone-anchored hearing devices
- Baha in children 59, 60, 68, 69
- bone complications
  - implant loss 63, 64
  - infection 64, 65
  - intraoperative complications 65
  - postoperative complications
    - bleeding 65
    - flap necrosis 65
    - pain 68
    - skin irritation and infection 65–68
    - skin overgrowth 68
- soft tissue complications
  - avoidance 70
  - causes
    - comorbidities 70
    - implant nature 69
    - scalp thickness 69, 70
    - types 65

Contralateral routing of signal (CROS) hearing aid 93, 95, 99, 103, 104, 120, 121

Conventional hearing aid, see Air conduction hearing aid

Cordelle, Baha sound processing 27, 28

CROS hearing aid, see Contralateral routing of signal hearing aid

Dentiphone 3–5

Directional hearing, see Binaural hearing, bone conduction devices

Divino, Baha sound processing 26–29, 79–82, 113–115, 118

Fitting
- Baha versus other devices 137
- processors 116, 117

GBI, see Glasgow Benefit Inventory

GHABP, see Glasgow Hearing Aid Benefit Profile

Glasgow Benefit Inventory (GBI) 99, 101

Glasgow Hearing Aid Benefit Profile (GHABP) 99
Head shadow effect 93
Headband
  audiometry testing 128–130
  design and use 126
  preoperative evaluation importance 124, 125
  skin damping effect 127, 128
Hearing in Noise Test (HINT) 100, 113
HINT, see Hearing in Noise Test
Historical perspective, bone conduction hearing devices
  antiquity to mid-19th century 2, 3
  bone-anchored hearing aid 6–8, 22, 134
  mastoid bone external stimulators 5, 6
  teeth stimulators 3–5
Intenso, Baha sound processing 27, 28, 116, 118
Loading time, Baha 26
Linear incision 50, 51, 54
Magnetically-fixed bone conduction hearing aid, see Otomag
Mastoid bone external stimulators, historical perspective 5, 6
Middle ear ossicle inertia, bone conduction sound 13, 14
Multiple channel nonlinear amplification, Baha sound processors 118
Noise management circuits 115, 116
Occlusion effect, bone conduction sound 13
Oticon Medical Implant System 35, 36
Otomag
  advantages 45, 46
  outcomes 43, 45
  overview 41, 42, 143
  patient selection 43
  principles 42
  surgery 43, 44
Partial implantable bone conduction hearing aid, see Otomag
Pediatric Baha, see Baha
Percutaneous-driven implanted transducer 143–145
Ponto bone-anchored hearing system
  indications 34
  Oticon Medical Implant System 35, 36
  outcomes 38, 39
  overview 32–34
  preoperative testing 34, 35
sound processors
  coupling 38
  types and performance 35, 37–39
  surgery 36, 37
Rectangle flap 49
Round flap 49, 50
Single-sided deafness (SSD), Baha outcomes, see also
  Binaural hearing, bone conduction devices
  Bern Benefit in Single-Sided Deafness questionnaire 103–110
  conventional solution
    contralateral routing of signal hearing aid 93, 95, 99, 103, 104
