Bibliographic Indices. This publication is listed in bibliographic services, including Current Contents® and Index Medicus.

Disclaimer. The statements, opinions and data contained in this publication are solely those of the individual authors and contributors and not of the publisher and the editor(s). The appearance of advertisements in the book is not a warranty, endorsement, or approval of the products or services advertised or of their effectiveness, quality or safety. The publisher and the editor(s) disclaim responsibility for any injury to persons or property resulting from any ideas, methods, instructions or products referred to in the content or advertisements.

Drug Dosage. The authors and the publisher have exerted every effort to ensure that drug selection and dosage set forth in this text are in accord with current recommendations and practice at the time of publication. However, in view of ongoing research, changes in government regulations, and the constant flow of information relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any change in indications and dosage and for added warnings and precautions. This is particularly important when the recommended agent is a new and/or infrequently employed drug.

This book is dedicated to the memory of Roger C. Bone, 1941–1997.
Contents

IX  Foreword
    Herwald, H.; Egesten, A. (Lund)

1  Roger C. Bone, MD and the Evolving Paradigms of Sepsis
    Balk, R. (Chicago, Ill.)

12  Clinical Aspects of Sepsis
    Holub, M.; Závada, J. (Prague)

31  Virulence Factors of Gram-Negative Bacteria in Sepsis with a Focus on
    Neisseria meningitidis
    Livorsi, D.J.; Stenehjem, E.; Stephens, D.S. (Atlanta, Ga.)

48  Molecular Mechanisms of Sepsis

86  Pro-Inflammatory Mechanisms in Sepsis
    Chong, D.L.W.; Sriskandan, S. (London)

108  Anti-Inflammatory Mechanisms of Sepsis
    Shubin, N.J.; Monaghan, S.F.; Ayala, A. (Providence, R.I.)

125  Regulation of Pro- and Anti-Inflammatory Host Responses
    van der Poll, T.; van Zoelen, M.A.D.; Wiersinga, W.J. (Amsterdam)

137  Future Perspectives on Regulating Pro- and Anti-Inflammatory
    Responses in Sepsis
    Delsesto, D. (Boston, Mass.); Opal, S.M. (Pawtucket, R.I.)

Foreword

Sepsis is a serious medical condition that is associated with high mortality despite the achievements of modern medical treatment. Keeping in mind that more than 35% of all intensive care patients suffer from septicemia at some point during their ICU stay, sepsis has to be considered a major health problem. During the course of disease, patients pass different pathophysiologic stages involving a modulation of pro- and anti-inflammatory reactions. Notably, the tightly regulated interplay of these two cascades determines an adequate immune response that is essential to erase the invading pathogen. Once this delicate balance is disturbed, a fatal outcome is often predictable. Only very recently, scientists and physicians started to appreciate the complex interaction between pro- and anti-inflammatory responses as part of the disease. This knowledge has been the template for the development of novel treatment strategies. The current volume of the book series Contributions to Microbiology is therefore an attempt to present the state of the art in this rapidly developing area of research. The book consists of eight chapters written by outstanding experts which cover the most important aspects from both a scientific and clinical point of view. It should be noted that our current knowledge has been tremendously influenced by the late Roger C. Bone. His groundbreaking work and visions are still the fundament of current concepts in severe infectious diseases and we have therefore dedicated this volume to his memory.
