Paper by Kang et al. [Digestion 2012;85:33-39]

We wish to withdraw our article 'Endoscopy-Based Decision Is Sufficient for Predicting Completeness in Lateral Resection Margin in Colon Endoscopic Submucosal Dissection' published in *Digestion* [2012;85:33–39] because it appears to contain an unacceptably high number of errors. The thematic focus continues to be relevant but the authors feel that greater caution and better judgment should have been exercised before submitting this particular article. As a consequence, all of the authors have decided to withdraw it from publication.
