Guidelines for Authors

Aims and scope of the journal
Caries Research is an international journal, the aim of which is to promote research in dental caries and related fields through publication of original research and critical evaluation of research findings. The journal will publish papers on the aetiology, pathogenesis, prevention and clinical control or management of dental caries. Papers on health outcomes related to dental caries are also of interest, as are papers on other disorders of dental hard tissues, such as dental erosion. Aspects of caries beyond the stage where the pulp ceases to be vital are outside the scope of the journal. The journal reviews papers dealing with natural products and other bacterial inhibitors against specific criteria, details of which are available from the Editor.

Submission
Only manuscripts written in English are considered and should be submitted using the online submission website www.karger.com/cre. During the online submission you will be asked to list complete mailing addresses, including e-mail addresses of three potential reviewers for your manuscript. Copies of any ‘in press’ papers cited in the manuscript must accompany the submission. Manuscripts reporting on clinical trials must be accompanied by the CONSORT checklist (see below).

Conditions
All manuscripts are subject to editorial review. Manuscripts are received with the explicit understanding that the data they contain have not previously been published (in any language) and that they are not under simultaneous consideration by any other publication. Submission of an article for publication implies the transfer of the copyright from the author to the publisher upon acceptance. Accepted papers become the property of Caries Research and may not be reproduced by any means, in whole or in part, without the written consent of the publisher. It is the author’s responsibility to obtain permission to reproduce illustrations, tables, etc., from other publications. Authors of papers on research on human subjects are required to state that they have adhered to the Declaration of Helsinki.

Types of paper
Original papers or Short Communications are reports of original work (including systematic reviews and meta-analyses). Both have the structure outlined below but for Short Communications the abstract should be less than 100 words and the manuscript should not exceed 3 printed pages, equivalent to about 9 manuscript pages for Short Communications the abstract should be less than 100 words and the manuscript should not exceed 3 printed pages, equivalent to about 9 manuscript pages (including tables, illustrations and references). Reviews can have a freer format but should nevertheless commence with a Title page, an Abstract and an Introduction defining the scope. Current topics are concise articles that present critical discussion of a topic of current interest, or a fresh look at a problem, and should aim to stimulate discussion. Letters to the Editor, commenting on recent papers in the journal, are published occasionally, together with a response from the authors of the paper concerned.

Preparation of manuscripts
Text should be one-and-a-half-spaced, with wide margins. All pages and all lines must be numbered, starting from the title page. A conventional font, such as Times New Roman or Arial, should be used, with a font size of 11 or 12. Avoid using italics except for Linnaean names of organisms and names of genes.

Manuscripts should be prepared as a text file plus separate files for illustrations. The text file should contain the following sequence of sections: Title page; Declaration of interests; Abstract; Introduction; Materials and Methods; Results; Discussion; Acknowledgements; References; Legends; Tables. Each section should start on a new page, except for the body of the paper (Introduction to Acknowledgements), which should be continuous. Lines in the manuscript must be numbered consecutively from the title page until the last page. Submissions which do not conform to these simple guidelines will be returned to the author.

Title page
The first page of each manuscript should show, in order:
• the title, which should be informative but concise;
• the authors’ names and initials, without degrees or professional status, followed by their institutes;
• a short title, maximum length 60 characters and spaces, for use as a running head;
• a list of 3–10 key words, that reflect the content of the paper;
• the name of the corresponding author and full contact details (postal address, telephone and fax numbers, and e-mail address).

Declaration of interests
Potential conflicts of interest should be identified for each author and, if there are no such conflicts, this should be stated explicitly. Conflict of interest exists where an author has a personal or financial relationship that might introduce bias or affect their judgement. Examples of situations where conflicts of interest might arise are restrictive conditions in the funding of the research, or if an author or their employer holds patent(s) on a product used in the study, or should an investigator from organisations with an interest in the study (including employment, consultancies, honours, ownership of shares, travel grant). Investigators should disclose potential conflicts to study participants and should state whether they have done so. The possible existence of a conflict of interest does not preclude consideration of a manuscript for publication, but the Editor might consider it appropriate to publish the disclosed information along with the paper.

Abstract
The abstract should summarise the contents of the paper in a single paragraph of no more than 250 words (to ensure that the abstract is published in full by on-line services such as PubMed). No attempt should be made to give numerical results in detail. References are not allowed in the abstract.

Introduction
This section should provide a concise summary of the background to the relevant field of research, introduce the specific problem addressed by the study and state the hypotheses to be tested.

Materials and methods (or Subjects and methods)
All relevant attributes of the material (e.g. tissue, patients or population sample) forming the subject of the research should be provided. Experimental, analytical and statistical methods should be described concisely but in enough detail that others can repeat the work. The name and address of the manufacturer or supplier of major equipment should be given. Statistical methods should be described with enough detail to enable a knowledgeable reader with access to the original data to verify the reported results. When possible, findings should be quantified and appropriate measures of error or uncertainty (such as confidence intervals) given. Sole reliance on statistical hypothesis testing, such as the use of P values, should be avoided. Details about eligibility criteria for subjects, randomization and the number of observations should be included. The computer software and the statistical methods used should be specified. See Altman et al.: Statistical guidelines for contributors to medical journals [Br Med J 1983:286:1489–93] for further information.

Manuscripts reporting studies on human subjects should include evidence that the research was ethically conducted in accordance with the Declaration of Helsinki (World Medical Association; www.wma.net). In particular, there must be a statement in Materials and Methods that the consent of an appropriate ethical committee was obtained prior to the start of the study and that subjects were volunteers who had given informed, written consent. Information detailing the power and sample size calculations must be included in the manuscript.

Randomized clinical trials must be reported according to the standardised protocol of the CONSORT Statement (www.consort-statement.org). The CONSORT checklist must be submitted together with papers reporting clinical trials. Randomized clinical trials must be registered at http://clinicaltrials.gov/ or similar national authority and the trial number included in the manuscript. Trials beginning after 1 July 2012 must be registered before recruit- ment of the first patient. Caries Research will accept ‘retrospective registration’ of trials that began before 1 July 2012 (retrospective meaning registration occurs after patient enrolment begins). When submitting a manuscript on a clinical trial, the trial registration number should be stated at the end of the abstract in the following format: Trial registration: [name of the trial registry; the registry URL and the trial registration number].

In studies on laboratory animals, the experimental procedures should conform to the principles laid down in the European Convention for the Protection of Vertebrate Animals used for Experimental and other Scientific Purposes (http://conventions.coe.int/Treaty/EN/Treaties/Hmt123.htm) and/or the National Research Council’s Guide for the Care and Use of Laboratory Animals (www.nap.edu/readingroom/books/labrats). Unless the purpose of a paper is to compare specific systems or products, commercial names of clinical and scientific equipment or scientific names of organisms used in the manuscript should be avoided. The computer software and the statisti- cal methods used should be specified. See Altman et al.: Statistical guidelines for contributors to medical journals [Br Med J 1983:286:1489–93] for further information.

In any manuscript involving microangiography, the following information must be included: the radiation source and filters used and the kV used (this determines the wavelength of radiation and hence the sensitivity of any particular system). Manuscripts on experimental enamel caries should show that the lesions retain a relatively well-preserved surface layer, i.e. are not surface softened lesions. Proof of surface integrity can be provided either as illustrations in the paper or as supplementary material for the reviewers. Transverse microangiography, polarized light microscopy of a section immersed in water or surface-scanning electron microscopy of a polished cross-section can be used to provide the necessary proof. To allow the nature of experimental chang- es to be assessed, microangiographs or micrographs should be provided to show part of the experimental lesion and the adjacent control (e.g. figure 2 of Zaura et al.: Caries Res 2007:41:489–492). Again, these images can be provided as part of the paper or as supplementary material for the reviewers.
Results
The results should be presented without interpretation. The same data should not be presented in both tables and figures. The text should not repeat numerical data provided in tables or figures but should indicate the most important results and describe relevant trends and patterns.

Discussion
This section has the functions of describing any limitations of material or methods, of interpreting the data and of drawing inferences about the contribution of the study to the wider field of research. There should be no repetition of preceding sections, e.g. reiteration of results or the aim of the research. The discussion should end with a few sentences summarising the conclusions of the study. However, there should not be a separate ‘Conclusions’ section.

Acknowledgements
Acknowledgment of contribution of colleagues (for technical assistance, statistical advice, critical comment etc.) and provide the position(s) of author(s) employed by commercial firms. This section should describe the source(s) of funding that has supported the research, including grant numbers. Please also include this sentence: “The funders had no role in study design, data collection and analysis, decision to publish, or preparation of the manuscript.” If this statement is not correct, you must describe the role of any sponsors or funders, and amend the sentence as needed. Additionally, the roles of all authors must be described (for example: Conceived and designed the experiments: AA, BB, RR. Performed the clinical examination: AA, CC. Performed the experiments: DD, FF. Analyzed the data: BB, FF. Wrote the paper: AA, CC, FF, EE).

References
References to other publications should: give due acknowledgement to previous work; provide the reader with accurate and up-to-date guidance on the field of research under discussion; and provide evidence to support the author’s argument. Authors should select references carefully to fulfill these aims without attempting to be comprehensive.

Cited work should already be published or officially accepted for publication. Material submitted for publication but not yet accepted should be cited as ‘unpublished results’, while unpublished observations communicated to the authors by another author should be cited as ‘personal communication’ or cited in in press or manuscript. Where references are cited in parenthesis, both in the text and figures.

Examples
(b) Papers published only with DOI numbers: The hardships TC, Boucher W, Spear K: Serum interleukin-6 reflects disease severity and osteoporosis in mastocytosis patients. Int Arch Allergy Immunol DOI:10.1159/000088838.

Legends
The table headings should be listed first, followed by the legends for the illustrations.

Tables
Tables should be numbered in Arabic numerals. Each table should be placed on a separate page. Tables should not be constructed using tabs but by utilising the table facilities of the word-processing software.

Illustrations
• Illustrations should be numbered in Arabic numerals in the sequence of citation. Figure numbers must be clearly indicated on the figures themselves, outside the image area.
• Black and white half-tone illustrations must have a minimum edge width of 0.5. Where a range of values is to be shown in an illustration, the minimum edge width should be 0.8.
• Figures with a screen background should not be submitted.
• When possible, group several illustrations in one figure for reproduction (max. size 180 000 × 223 mm).

Color illustrations
Online edition: Color illustrations are reproduced free of charge. In the print version, the illustrations are reproduced in black and white. Please avoid referring to the colors in the text and figures.

Print edition: Up to 6 color illustrations per page can be integrated within the text at CHF 800.– per page.

Supplementary Material
Supplementary material is restricted to additional information which is directly pertinent to the content and conclusion of the paper. Please note that all supplementary files will undergo editorial review and should be submitted together with the original manuscript. The editors reserve the right to reject or limit the scope and length of supplementary material. Supplementary material must meet journal standards for web publication without the need for any modification or editing. In general, supplementary files should not exceed 10 MB in size. Acceptable file formats are word or pdf, excel spreadsheets (only if the data cannot be converted properly to a pdf file), video files (.mov, .avi, .mpeg), and audio files (.wav), either free standing or incorporated into html or ppt files in each case to illustrate the sound.

Accepted supplementary material will be published as submitted and no proofs will be provided to the authors.

Digital Object Identifier (DOI)
S. Karger Publishers supports DOIs as unique identifiers for articles. A DOI number will be printed on the title page of each article. DOIs can be useful in the future for identifying and citing articles published online without volume or issue information. More information can be found at www.doi.org.

Author’s Choice™
Karger’s Author’s Choice™ service broadens the reach of your article and gives all users worldwide free and full access for reading, downloading, and printing at www.karger.com. The option is available for a one-time fee of CHF 3000.–, which is a permissible cost in grant allocation. More information can be found at www.karger.com/authors_choice.

NIH-Funded Research
The U.S. National Institutes of Health (NIH) mandates use of the NIH Public Access Policy that final, peer-reviewed manuscripts appear in its digital database with- in 12 months of the official publication date. As a service to authors, Karger submits the final version of your article on your behalf to PubMed Central. For those selecting our premium Author’s Choice™ service, we will send your article immediately upon publishing, accelerating the accessibility of your work without the usual embargo. More details on NIH Public Access Policy is available at http://publicaccess.nih.gov/policy.htm

Self-Archiving
Karger permits authors to archive their pre-prints (i.e. pre-refereeing) or post-prints (i.e. final draft post-refereeing) on their personal or institution’s servers, provided the following conditions are met: Articles may not be used for commercial purposes, must be linked to the publisher’s version, and must acknowledge the publisher’s copyright. Authors selecting Karger’s Author’s Choice™ feature, however, are also permitted to archive the final, published version of their article, which includes copylefting and design improvements as well as citation links.

Page Charges
There are no page charges for papers of seven or fewer printed pages (including tables, illustrations and references). A charge of CHF 650.– will be levied for each page in excess of the allotted seven printed pages. The allotted size of a paper is equal to approximately 21 typescript pages (including tables, illustrations and references).

Proofs
Unless indicated otherwise, proofs are sent to the corresponding author and should be returned with the least possible delay. Alterations other than the correction of printer’s errors are charged to the author.

Reprints
Order forms and a price list are sent with the proofs. Orders submitted after this issue is printed are subject to considerably higher prices.
