Subject Index

ADAMTS, mouse mutants and palate development 37, 38
Africa, cleft lip and palate prevalence 6, 7
Alcohol dependence, pregnancy risks for cleft 25, 61
Altitude, pregnancy risks for cleft 25, 27, 61
Alveolar bone grafting
  bone morphogenetic protein utilization 129
  canine impaction frequency 130
  dental arch space management
    orthodontic space closure 130, 131
    tooth implants 131, 132
    tooth transplantation 131
donor bone
  autogeneous bony substitutes 129
  site morbidity
    cranium 128
    iliac crest 128
    mandibular symphysis 128
    rib 128
    tibia 128
types 127, 128
goals 126
historical perspective 124, 125
mixed dentition 125, 126
orthodontics 117–119, 126, 127, 130, 131
outcomes
  evaluation 129, 130
  factors affecting 130
  prospects 132, 133
surgical technique 127
terminology 126
timing 126
Americleft Study 97, 98
γ-Aminobutyric acid (GABA), signaling defects in cleft palate 149
AXIN2, cleft defects 24, 26
BMPs, see Bone morphogenetic proteins
Bone graft, see Alveolar bone grafting
Bone morphogenetic proteins (BMPs)
  alveolar bone grafting utilization 129
  gene mutations in syndromic clefting 42, 44, 66, 67
  palate development role
    animal models 64–66
    expression patterns 63, 64
  rescue studies 148, 149
  signaling overview 62, 63
Canine impaction, frequency in alveolar bone grafting 130
Catnb, mutant mice 84–86
CDH1, cleft defects 24, 26
Chromosome 1, cleft lip and palate locus 21
Chromosome 8, cleft lip and palate locus 23
Clinical nurse specialist, speech therapist interactions 144
Cranium, alveolar bone grafting 128
Dlx5
  mouse mutants 149
  oro-nasal axis patterning 56, 57
Ephrins
  knockout mice 35, 36
  palatal fusion role 151
Epidemiology, cleft lip and palate
  associated malformations 5
  classification
    microforms 9
    sub-phenotypes 8, 9, 60
cleft types 3, 10, 11
data deficiencies 5
environmental factors 24–26, 61
ethnic origin and migration studies 2
EUROCAT study 5, 9
folic acid food fortification impact 12
geographic variation in prevalence
incomplete ascertainment 8
India 6–8
latitude and longitude 11, 12
overview 1, 2
Saudi Arabia 8, 10
Sub-Saharan Africa 6, 7
morbidity quantification 14
mortality 12–14
severity of cleft and additional malformations 3, 4, 10, 11
sex distribution 4, 60
stillbirths and abortions 4, 9
unilateral cleft 4
EUROCAT study 5, 9
Eurocleft study 94–96

Fbxo11, mouse mutants 40
Fbxw7, mouse mutants 40
FGFs, see Fibroblast growth factors
Fibroblast growth factors (FGFs)
Fgf7 in oro-nasal axis patterning 56, 57
Fgfr2 activating mutation in mice 45
lip and palate development role
expression distribution 73, 74
knockout mouse studies 75, 76
receptors 74, 75
pathway mutations in cleft lip and palate
pathogenesis 76, 77
prospects for study 77, 78
signaling overview 71–73
Folic acid, epidemiological studies of food
fortification impact 12
Fzd2, knockout mouse 87

GABA, see γ-Aminobutyric acid
Genome-wide association studies, cleft lip and palate 20, 22
Gingivo-periosteoplasty, adjunct to surgery 105, 106
Gsk3b, knockout mouse 85, 86, 152

Hypoxia, pregnancy risks for cleft 25

Iliac crest, alveolar bone grafting 128
India, cleft lip and palate prevalence 6–8
Integrins, knockout mice 39
Interferon regulatory factor 6 (IRF6)
cleft association studies 20, 21
mouse models
knock-in mouse 39
mutagenesis 45
IRF6, see Interferon regulatory factor 6

Jeff, mouse mutants 40

Language, see Speech
LEF1, knockout mouse 84
Linkage studies, cleft lip and palate 20, 22
Lip adhesion, adjunct to surgery 105
Lip repair, see Surgical correction
LRP6, mouse mutants 83–85

Mandibular symphysis, alveolar bone grafting 128
MAPK, see Mitogen-activated protein kinase
Meningioma1, knockout mouse 35
Mitogen-activated protein kinase (MAPK), palate
development role 36
Mortality, cleft lip and palate 12–14
Mouse models, cleft lip and palate
advantages 32, 33
candidate gene identification 34
caveats 46, 47
drug-dependent mutant engineering 151, 152
gene targeting 34, 35
mutagenesis 43–45
palate development 62, 148
prospects for study 47
tissue-specific gene targeting 41, 42
transgenic mice 42, 43
ubiquitous gene alterations

clefting caused by altered growth of lip and palate primordia 35–37
clefting caused by altered palatal shelf elevation 37, 38
clefting caused by failure of fusion of lip and palate primordia 38, 39
overview 35

MSXI
clefting mutations 66
knockout mouse 37, 149

NAR, see Naso-alveolar molding
Naso-alveolar molding (NAR), adjunct to surgery 105

Nose
- cleft lip nose surgical management 108, 109
- speech characteristics with cleft palate
  - nasal airflow abnormalities 141
  - nasal resonance abnormalities 141

Odd-skipped related (osr), knockout mouse 37

Orthodontics
- adjunct to surgery 104, 105
- alveolar bone grafting 117–119, 126, 127, 130, 131
- orthognathic and osteogenic distraction surgical orthodontics 120–122
- overview 111, 112
- presurgical maxillary orthopaedics 112–114
- speech bulb 145
- speech therapist interactions 144, 145
- treatment by age
  - 5–8 years 115–117
  - 8–12 years 117–119
  - 11–15 years 119, 120
  - adults 122

osr, see Odd-skipped related

Palatal lift, orthodontics 145

Palate repair, see Surgical correction

Pax9, knockout mouse 37

Prdm 16, mouse mutants 45

Prenatal detection, cleft palate 152, 153

Presurgical maxillary orthopaedics (PSO) 112–114

Prevalence, see Epidemiology

PSO, see Presurgical maxillary orthopaedics

Ptprf, mouse mutants 40

Ptprs, knockout mouse 40

Rib, alveolar bone grafting 128

RNA interference, mouse studies of clefting 44, 45

Rspo2, knockout mouse 84, 85

Runx1, mutant mice 43

Ryk, knockout mouse 87

Saudi Arabia, cleft lip and palate prevalence 8, 10

Shh, see Sonic Hedgehog

Snad2, mouse mutants 40

SMOCl, Waardenburg anophthalmia syndrome mutations 44

Smoking, pregnancy risks for cleft 24, 25, 61

Snai, knockout mouse 39

Sonic Hedgehog (Shh)
- anteroposterior axis patterning 57
- expression in developing palate 53, 54
- mouse mutants 43, 54
- oro-nasal axis patterning 56, 57
- rescue studies 148, 149
- secondary palate development role 54–56, 149
- signaling overview 52, 53

Speech
- assessment with cleft palate 140, 141, 143
- barriers with cleft palate
  - anatomy 138
  - hearing loss 139
  - incidence of speech problems 140
  - overview 139
  - syndromic impairments 139, 140
- characteristics with cleft palate
  - anterior cleft effects 141, 142
  - nasal airflow abnormalities 141
  - nasal resonance abnormalities 141
  - non-oral cleft effects 142
  - passive cleft effects 142
  - posterior cleft effects 142
  - development of speech and language 137, 138
- orthodontics 145
- palatal function 138
- speech therapist
  - indications for therapy 143, 144
  - multidisciplinary team interactions 144
  - velopharyngeal dysfunction 142, 143

Speech bulb, orthodontics 145

Spry2, mutant mice 43

SUMO1, mutant mice 43

Surgical correction, cleft lip and palate
- adjunctive therapy
  - gingivo-periosteoplasty 105, 106
  - lip adhesion 105
  - naso-alveolar molding 105
  - orthodontics 104, 105
- alveolar bone grafting, see Alveolar bone grafting
- anatomy 101–103
- facial skeleton deformity correction 109
- goals 101
- lip repair 106, 107
- nose management 108, 109
- outcomes studies, see Surgical outcomes
- palate repair 107, 108
- prospects 109
- timing 103, 104

Subject Index
velopharyngeal incompetence correction 108
Surgical outcomes, cleft lip and palate
alveolar bone grafting
evaluation 129, 130
factors affecting 130
Americleft Study 97, 98
Eurocleft study 94–96
lateral cephalograms 94
limitations of studies 91, 92
measurement 92–94
mortality impact 12–14
prospects for study 98, 99
study models 93, 94
United Kingdom Standards Advisory Group 96, 97

United Kingdom Standards Advisory Group 96, 97
Velopharyngeal incompetence (VPI)
correction 108, 143
epidemiology 142
Vlk, knockout mouse 37, 38
VPI, see Velopharyngeal incompetence

Waardenburg anophthalmia syndrome (WAS), gene mutations 44
WAS, see Waardenburg anophthalmia syndrome
Wnt
canonical versus non-canonical signaling 81–83
lip development
canonical signaling 83, 84
non-canonical signaling 84
mutations in clefting 83
palate development
canonical signaling 84–86
non-canonical signaling 86, 87
Wnt5a mouse mutants 37, 86, 87

Tbx22, knockout mouse 35
TCF4, knockout mouse 84
TGF-α, see Transforming growth factor-α
TGF-β, see Transforming growth factor-β
Tibia, alveolar bone grafting 128
Tooth implant 131, 132
Tp63, knockout mouse 37, 39
Transforming growth factor-α (TGF-α), cleft lip and palate mutation 61
Transforming growth factor-β (TGF-β)
fusion of lip and palate primordia 39, 31, 150, 151
palate development role 62, 148
Twin studies, cleft lip and palate 61
