European Surgical Research features original clinical and experimental papers, condensed reviews of new knowledge relevant to surgical research, and short technical notes serving the information needs of investigators in various fields of operative medicine. Coverage includes surgery, surgical pathophysiology, drug usage, and new surgical techniques. Special consideration is given to information on the use of animal models, physiological and biological methods as well as bio-physical measuring and recording systems. The journal is of particular value for workers interested in pathophysiologic concepts, new techniques and in how these can be introduced into clinical work or applied when critical decisions are made concerning the use of new procedures or drugs.

Selected contributions
Liver Regeneration in Surgical Animal Models — A Historical Perspective and Clinical Implications: Mortensen, K.E.; Revhaug, A. (Tromsoe)
Effect of Diclofenac on Cyclooxygenase-2 Levels and Early Breaking Strength of Experimental Colonic Anastomoses and Skin Incisions: Klein, M. (Herlev); Krarup, P.-M. (Copenhagen); Burcharth, J. (Herlev); Ågren, M.S. (Copenhagen); Gögenur, I. (Herlev); Jorgensen, L.N. (Copenhagen); Rosenberg, J. (Herlev)
Cytotoxic Effect of Hyperthermia and Chemotherapy with Platinum Salt on Ovarian Cancer Cells: Results of an in vitro Study: Muller, M. (Brest/Nantes); Chérel, M. (Nantes); Dupré, P.-F. (Brest); Gouard, S. (Nantes); Collet, M. (Brest); Classe, J.-M. (Nantes/Saint-Heblain)
Treatment of Growth-Restricted Human Fetuses with Amino Acids and Glucose Supplementation through a Chronic Fetal Intravascular Perinatal Port System: Tchirkov, M. (Minsk); Kharchevich, O. (Minsk); Steetskamp, J. (Minsk); Beluga, M. (Minsk); Strohner, M. (Minsk)

Aims and Scope
The prime mission of European Surgical Research is to publish high-quality original manuscripts of basic and translational research and review articles concerned with laboratory and clinical investigations which are relevant to surgical practice and of general interest to a broad range of academic surgeons and surgical researchers. Manuscripts dealing with research relevance to human surgical diseases are given high priority along with those which explore the pathogenesis, etiology, and mechanisms of disease processes. European Surgical Research seeks to preferentially publish research articles that integrate molecular biological methods, along with functional studies, into the analysis of biological questions and that advance basic and translational knowledge of surgical pathophysiology. European Surgical Research will provide an international platform for basic and translational research and clinical investigations impacting directly on surgical care and management. European Surgical Research also features special articles relating to academic surgical community.

Submission
Only original papers written in English are considered and should be submitted online:
www.karger.com/esr
All manuscripts must be accompanied by a cover letter and copyright signed by all authors. Assurance should be given in the cover letter that the manuscript is not under simultaneous consideration by any other publication.
Authors may suggest up to five referees who have expert knowledge on the subject. Suggested referees should not be from the same institution, not have published with the authors during the last 5 years, and should not be prejudiced.

Manuscripts may be submitted to the following sections:
(1) Original Papers on basic, translational and clinical science
(2) Technical Notes
(3) Systematic Reviews and Meta-Analyses

Original Papers: These manuscripts should represent original research in basic, translational, or clinical science. Consideration for publication is based on originality, novelty, scientific soundness, and appropriate analysis. European Surgical Research encourages the submission of relevant and well-conducted work in basic, experimental, and clinical science. Manuscripts should be prepared according to the guidelines for original papers.

Technical Notes: These manuscripts present a new method, experimental model, test procedure, tool, or algorithm that is relevant for surgical research and significantly advances current available knowledge.

Systematic Reviews and Meta-Analyses: European Surgical Research aims to publish expert basic and translational reviews of selected up-to-date topics in experimental surgery. On occasion, the Editor-in-Chief will invite guest editors to prepare reviews on a specific topic, which are usually presented pair-wise. Exceptions include formal true Systematic Reviews with Meta-Analyses which are well performed, and which are considered Original Papers.

You should experience any problems with your submission, please contact: esr@karger.ch

Conditions
All manuscripts are subject to editorial review. Manuscripts are received with the explicit understanding that they are not under simultaneous consideration by any other publication. Submission of an article for publication implies transfer of the copyright from the author to the publisher upon acceptance. Accepted papers become the permanent property of European Surgical Research and may not be reproduced by any means, in whole or in part, without the written consent of the publisher. It is the author’s responsibility to obtain permission to reproduce illustrations, tables, etc. from other publications.

Disclosure Statement
Authors are required to disclose any sponsorship or funding arrangements relating to their research and all authors should disclose any possible conflicts of interest. Disclosure statements will be published at the end of the text of the article.

Plagiarism Policy
Whether intentional or not, plagiarism is a serious violation. We define plagiarism as a case in which a paper reproduces another work with at least 25% similarity and without citation.

If evidence of plagiarism is found before/after acceptance or after publication of the paper, the author will be offered a chance for rebuttal. If the arguments are not found to be satisfactory, the manuscript will be retracted and the author sanctioned from publishing papers for a period to be determined by the responsible Editor.

Ethics
European Surgical Research requires that all published research must comply with guidelines for human studies and animal welfare regulations. Authors should state that subjects have given their informed consent and that the study protocol has been approved by the institution’s committee on human research. Further, they should also state that animal experiments conform to institutional standards.

Authors are required to declare the approval codes obtained from the corresponding ethical committee on human and/or animal research.

Arrangement
The manuscript should conform to the following order: title page, abstract and key words, body, acknowledgments, references, figure legends, tables, and figures. Manuscripts should be written in high-quality English suitable for effective communication to a professional medical audience. Authors who are not native speakers of English sometimes receive negative comments from referees or editors about the English-language usage in their manuscripts, and these problems can contribute to the decision to reject a paper. To help reduce the possibility of such problems, we strongly encourage such authors (i) to have their manuscript reviewed for clarity by a colleague whose native language is English and/or (ii) to use one of the many English language editing services that are available via the Web.

All pages, including the figure legends, should be numbered in sequence, and the first author’s name should appear at the upper right corner of each page. Papers not conforming to the journal style will be returned without review.

Title page: The first page of each paper should indicate a concise title of no more than 150 characters, all authors’ names (first name and surname), authors’ institutional affiliations, and a short title for use as a running head.

Corresponding author: The exact postal address of author(s) to whom correspondence, proofs, and reprint requests should be sent, including the postal code, must be given at the bottom of the title page. Please also supply phone and number and e-mail address.

Abstract: Submit the abstract on a separate page. The abstract is structured into Background/Purpose, Methods, Results and Conclusions and should be less than 400 words in length.

Key words: Following the abstract, an alphabetical list of five key words that reflect the content of the paper should be given.

Footnotes: Avoid footnotes.

Body of manuscript: The text should be organized into: Introduction, Materials and Methods. Discussion. Acknowledgments, including grant numbers and sources of support, Disclosure/Duality of Interest (optional), and References. Abbreviations/acronyms are defined in both the abstract and body of the text as follows: vascular permeability factor (VPF), transforming growth factor-β (TGF-β). They should only be used in the abstract if they appear twice after first being mentioned and in the body of the text only if they appear three times after first being mentioned.

Tables and illustrations: Tables and illustrations (both numbered in sequential Arabic numerals) should be prepared as separate files. Tables require a brief and concise heading. Figures require a legend, prepared as a separate page, after references. Please use scale markers for electron micrographs, and indicate the type of stain used. For the reproduction of illustrations, only good drawings and original photographs can be accepted; negatives or photocopies cannot be used. Due to technical reasons, figures with a screen background should not be submitted. When possible, group several illustrations in one block for reproduction (max. size 180 x 223 mm) or provide crop marks. Electronically submitted b/w half-tone and color illustrations must have a final resolution of 300 dpi after scaling, line drawings one of 800 – 1,200 dpi.

Color illustrations: Online edition: Color illustrations are reproduced free of charge. In the print version, the illustrations are reproduced in black and white. Please avoid referring to the colors in the text and figure legends.

Print edition: Up to 6 color illustrations per page can be integrated within the text at CHF 800.– per page.

References: In the text identify references by Arabic numerals [in square brackets]. Material submitted for publication but not yet accepted should be noted as ‘unpublished data’ and not be included in the reference list. The list of references should include only those publications which are cited in the text. Do not alphabetize; number references in the order in which they are first mentioned in the text. The surnames of the authors followed by initials should be given. There should be no punctuation other than a comma to separate the authors. Preferably, please cite all authors. Abbreviate journal names according to the Index Medicus system. Also see International Committee of Medical Journal Editors: Uniform requirements for manuscripts submitted to biomedical journals (www.icmje.org).

Guidelines for Authors
Guidelines for Authors

Self-Archiving
Karger permits authors to archive their pre-prints (i.e. pre-refereeing) or post-prints (i.e. final draft post-refereeing) on their personal or institution’s servers, provided the following conditions are met: Articles may not be used for commercial purposes, must be linked to the publisher’s version, and must acknowledge the publisher’s copyright. Authors selecting Karger’s Author’s Choice™ feature, however, are also permitted to archive the final, published version of their article, which includes copy-editing and design improvements as well as citation links.

Page Charges
A charge of CHF 125.– per page will be levied for the first 4 printed pages of an article. Any additional page will be charged to the author at CHF 325.–. The allotted size of a paper is equal to approx. 12 manuscript pages (including tables, illustrations and references).

Proofs
Unless indicated otherwise, proofs are sent to the corresponding author and should be returned with the least possible delay. Alterations other than the correction of printer’s errors are charged to the author.

Reprints
Order forms and a price list are sent with the proofs. Orders submitted after the issue is printed are subject to considerably higher prices.

Examples
(b) Papers published only with DOI numbers: Theoharides TC, Boucher W, Spear K: Serum interleukin-6 reflects disease severity and osteoporosis in mastocytosis patients. Int Arch Allergy Immunol DOI: 10.1159/000063858.

Reference Management Software: Use of EndNote is recommended for easy management and formatting of citations and reference lists.

Digital Object Identifier (DOI)
S. Karger Publishers supports DOIs as unique identifiers for articles. A DOI number will be printed on the title page of each article. DOIs can be useful in the future for identifying and citing articles published online without volume or issue information. More information can be found at www.doi.org.

Supplementary Material
Supplementary material is restricted to additional data found at www.doi.org. DOI: 10.1159/000063858.

PDS Plus
EVERYONE DESERVES ADDITIONAL PROTECTION
Safe abdominal wall closure with additional protection from post-operative wound infections

According to the results of the Insect Study of the “Studienzentrum der Deutschen Gesellschaft für Chirurgie”, which were published in 2009, the incidence of abdominal wall hernia and wound infections is higher than expected. 

With an average of 16.1% the rate of wound infections was higher than expected of the antibiotic prophylaxis. 

The antibacterial PDS Plus suture material can make a contribution to reduce the potential risk of hernia formation and wound infection.

PDS Plus – because every infection is one too many.
