Subject Index

Acetylsalicylate, antipsychotic drug efficacy effects 109, 110
Acute inflammatory response, cytokines and markers 175, 165
Allergy, suicidality studies 194, 195
Ampligen, myalgic encephalitis/chronic fatigue syndrome management 171, 172
Anterior cingulate cortex, cytokines and inflammation 39
Antipsychotic drugs, see Schizophrenia
Anxiety disorder, cardiovascular disease epidemiology 146
Aspirin, see Acetylsalicylate
Asthma, suicidality studies 194, 195
Astrocyte, neuroinflammation modulation 8
Bacterial translocation, myalgic encephalitis/chronic fatigue syndrome pathophysiology 166, 167
Basal ganglia, cytokines and inflammation 38, 39
Bipolar disorder
  brain-derived neurotrophic factor levels 64
  inflammatory cytokine levels 64, 77
  omega-3 fatty acid supplementation studies 84, 85
  tryptophan metabolism 68
Blood-brain barrier
  neuroinflammation role 3–6, 55, 56
  peripheral cytokine transport 176
Borna disease virus, neuroinflammation and psychiatric disease 50, 52
Brain-derived neurotrophic factor
  bipolar disorder levels 64
  cytokine effects 37
  depression levels 77
Brain-gut axis, see Gut microbiota
Cardiovascular disease
  endothelial dysfunction in depressive illness 153
  epidemiology in depressive illness
    anxiety disorder 146
    depression 145, 146
    mechanisms of comorbidity
      nitric oxide 154
    overview 148, 149
    platelet function 153, 154
    personality type 147, 148
    posttraumatic stress disorder 146, 147
    psychological distress 147
  inflammation
    affective disorders 152, 153
    cardiovascular pathology 151, 152
    reflex versus cholinergic anti-inflammatory pathway 151
    overview 144, 145
    selective serotonin reuptake inhibitors in risk reduction 155, 156
    serotonergic transmission between brain and immune system 154, 155
    stress
      neuroendocrine consequences 150
      psychophysiologic consequences 149, 150
Catecholamines
  cytokine effects on metabolism 36
  neurogenic inflammation modulation 25
Chemokines, monocyte recruitment into central nervous system 9, 10
Chronic fatigue syndrome, see Myalgic encephalitis/chronic fatigue syndrome
Coenzyme Q10, deficiency in myalgic encephalitis/chronic fatigue syndrome 170

Cognition
diffusion tensor imaging findings with inflammation 182
inflammation interventions in risk reduction 182–184
interleukin-6 effects in middle-age adults cognitive function 178, 179
hippocampal gray matter volume 180, 181
white matter hyperintensity response to inflammation 181, 182

Corticosteroids, see Glucocorticoids
C-reactive protein, depression patient levels 34

Cyclooxygenase
COX-2 stress response 28, 29
depression therapeutic targeting 40, 41, 63

Depression, see also Suicidality
cardiovascular disease association, see Cardiovascular disease
comorbidity with physical illness 120
cytokine effects on brain anterior cingulate cortex 39
basal ganglia 38, 39
neurogenesis and neurotrophic factors 37, 38
neurotransmitter metabolism glutamate 36, 37
monoamines 36
pathogenesis of depression 128, 129
glucocorticoid interaction with inflammation animal studies 131
clinical studies 132
cytokines activation of hypothalamic-pituitary-adrenal axis 133
effects on glucocorticoid signaling 132–134
neuroendocrine abnormalities and cytokine-induced damage 133
glucocorticoid receptor response to inflammation 131
glucocorticoid resistance induction 131
neurodegeneration in pathogenesis 137, 138
neurogenesis in pathogenesis 137
overview 130, 131
potentiation of inflammation animal studies 135
cell studies 135
human studies 135, 136
mechanisms 136
overview 134

hygiene hypothesis 119
hypercortisolemia adverse effects 119, 120
immunomodulatory therapy behavioral interventions 43
cyclooxygenase inhibitors 40, 41
cytokine blockade 40
indoleamine 2,3-dioxygenase inhibitors 42, 43
nuclear factor-κB antagonists 41, 42
p38 inhibitors 41
inflammation association biomarker studies 34
cytokine administration and depression induction 34
stress induction 35
inflammatory cytokine levels 63, 76
metabolic syndrome association, see Metabolic syndrome
myalgic encephalitis/chronic fatigue syndrome 164
neuroendocrine system in pathogenesis 129, 130
omega-3 fatty acid supplementation studies bipolar disorder 84, 85
major depressive disorder 83, 84
postpartum depression 85
prospects for study 87
probiotic studies 96, 97
T cell function 77, 78
tryptophan metabolism 67, 68
Diffusion tensor imaging, findings with inflammation 182
Docosahexaenoic acid, see Omega-3 fatty acids
Dopamine, see Catecholamines
Eicosapentaenoic acid, see Omega-3 fatty acids
Epilepsy, suicidality studies 196
Epinephrine, see Catecholamines
Epstein-Barr virus multiple sclerosis role 56
myalgic encephalitis/chronic fatigue syndrome role 168
Fatigue, see Myalgic encephalitis/chronic fatigue syndromes
Glucocorticoids
hypercortisolemia adverse effects in depression 119, 120
inflammation interactions in depression
  animal studies 131
clinical studies 132
cytokines
  activation of hypothalamic-pituitary-adrenal axis 133
effects on glucocorticoid signaling 132–134
  neuroendocrine abnormalities and cytokine-induced damage 133
glucocorticoid receptor response to inflammation 131
glucocorticoid resistance induction 131
neurodegeneration in pathogenesis 137, 138
neurogenesis in pathogenesis 137
overview 130, 131
potentiation of inflammation
  animal studies 135
cell studies 135
  human studies 135, 136
  mechanisms 136
overview 134
  prospects for study 136, 137
neurogenic inflammation modulation 23–25
  resistance mechanisms 38
serum sampling 93
Glutamate, cytokine effects on metabolism 36, 37
Gut microbiota
  composition and development 91
germ-free animal studies 91–93
  obesity studies 94, 95
  probiotic studies
    depression 96, 97
    irritable bowel syndrome 93, 94
    stress-induced dysfunction 95, 96
Hippocampus
  inflammation effects on cognitive function 179, 180
  interleukin-6 effects on gray matter volume 180, 181
Human immunodeficiency virus
  encephalitis 54
  suicidality studies 196
Hypercortisolemia, adverse effects in depression 119, 120
Indoleamine 2,3-dioxygenase, see also Tryptophan metabolism
  activation in neuroinflammation 10, 65, 66
cytokine modulation 36
depression therapeutic targeting 42, 43
  tryptophan metabolism 65
Inducible nitric oxide synthase, stress response 28
Interferon-α
  depression induction with therapy 35, 36, 76
  suicidality studies with therapy 194
Interleukin-1
  brain cell sources 61, 62
  neurogenic inflammation modulation 25, 26
  neuromodulation 62
  receptor antagonist
    depression 76
    schizophrenia 103
Interleukin-2
  antipsychotic drug impact on immune function 108
  depression levels 76
  schizophrenia levels 102–104
Interleukin-6
  cognition effects in middle-age adults
    cognitive function 178, 179
    hippocampal gray matter volume 180, 181
  neurogenic inflammation modulation 27
Interleukin-8, antipsychotic drug impact on immune function 108
Irritable bowel syndrome, probiotic studies 93, 94
Ketamine, suicidality management 189
Kynurenine 3-monooxygenase, see also Tryptophan metabolism
  activation in neuroinflammation 10, 66
  tryptophan metabolism 65
Low-level neuroinflammation, viral infection 50, 53, 54, 57
Macrophage, neuroinflammation modulation 7, 8
Magnetic resonance imaging, see Diffusion tensor imaging, White matter hyperintensity
Major depressive disorder, omega-3 fatty acid supplementation studies 83, 84
Metabolic syndrome, link with inflammation and depression 122–124
Microbiota, see Gut microbiota
Microglia, neuroinflammation modulation 6, 7
Mindfulness-based stress reduction, depression management 43
Minocycline, antipsychotic drug efficacy effects 110, 111
Multiple sclerosis
    Epstein-Barr virus role 56
    suicidality studies 195, 196
Myalgic encephalitis/chronic fatigue syndrome
    cardiovascular abnormalities 167
    diagnostic classification and subgroups 163, 164
    neurological abnormalities 167
    novel therapies 170–172
    overview 162, 163
pathophysiology
    autoimmunity 167
    bacterial translocation 166, 167
    inflammation and immune activation 165, 166, 169, 170
    oxidative/nitrosative stress 166, 169, 170
    signaling pathway activation 166
    risk factors 168
    stress response abnormalities 167, 168
    symptoms 164, 165
    triggers and maintenance factors 168, 169
Neuroinflammation
    blood-brain barrier role 3–6, 55, 56
    cell modulation
        astrocyte 8
        cytokine secretion 8–10
        macrophage 7, 8
        microglia 6, 7
    central nervous inflammation studies, see also
        specific brain regions
            animals 176, 177
            humans 177, 178
    diagnosis 53
    low-level neuroinflammation and viral infection 50, 53, 54, 57
    metabolic syndrome link with inflammation and depression 122–124
    neuroimmune communication
        afferents 10–13
        efferents 13, 14
        overview 1–4, 52, 53
    psychiatric disease studies, see specific diseases
    stress response, see Stress
    virus induction, see specific viruses
Neuropeptide Y, neurogenic inflammation modulation 23
Nitric oxide
    endothelial dysfunction in depressive illness 153, 154
    stress response 28
Nitrosative stress, myalgic encephalitis/chronic fatigue syndrome pathophysiology 166, 169, 170
Norepinephrine, see Catecholamines
Nuclear factor-κB
    depression patient levels 34
    depression therapeutic targeting 41, 42
    stress response 27, 28
Obesity, gut microbiota studies 94, 95
Omega-3 fatty acids
    affective disorder treatment studies
        bipolar disorder 84, 85
        major depressive disorders 83, 84
        postpartum depression 85
    prospects for study 87
    anti-inflammatory activity 80–82, 86
    brain function 80–82
    overview 79, 80
    schizophrenia studies 111
Oxidative stress, myalgic encephalitis/chronic fatigue syndrome pathophysiology 166, 169, 170
p38, depression therapeutic targeting 41
Personality, type and cardiovascular disease epidemiology 147, 148
Postpartum depression, omega-3 fatty acid supplementation studies 85
Posttraumatic stress disorder, cardiovascular disease epidemiology 146, 147
Prefrontal cortex, inflammation effects on cognitive function 179, 180
Probiotics, see Gut microbiota
Quinolinic acid, suicidality role 192, 193
Rituximab, myalgic encephalitis/chronic fatigue syndrome management 171, 172
Schizophrenia
    antipsychotic drugs
        anti-inflammatory drug effects on efficacy
            acetylsalicylate 109, 110
            minocycline 110, 111
            impact on immune function 108
        inflammatory cytokine levels 64, 77, 102–104
omega-3 fatty acid supplementation studies 111
prenatal immune challenge studies in rodents 106–108
risk factors 100, 101
T cell function 102–105
tryptophan metabolism 68, 69
Selective serotonin reuptake inhibitors, cardiovascular disease risk reduction 155, 156
Sickness behavior, versus depression 118, 119
Stress
cyclooxygenase-2 response 28, 29
depression studies 35
early life trauma and inflammation 120–122
gut microbiota dysfunction response 95, 96
hypothalamic-pituitary-adrenal axis 20, 21
inducible nitric oxide synthase response 28
myalgic encephalitis/chronic fatigue syndrome stress response abnormalities 167, 168
neuroendocrine consequences 150
neurogenic inflammation modulation
C fiber studies 21, 22
catecholamines 25
glucocorticoids 23–25
interleukin-1 25, 26
interleukin-6 27
neuropeptide Y 23
substance P 22, 23
tumor necrosis factor-α 26, 27
nitric oxide response 28
nuclear factor-κB response 27, 28
overview 20, 21
psychophysiologic consequences 149, 150
suicide role 190, 191
Substance P, neurogenic inflammation modulation 22, 23
Suicidality inflammation
conditions associated with suicidality
asthma and allergy 194, 195
autoimmune disease 195, 196
epilepsy 196
infection 196
interferon-α therapy 194
mechanisms of ideation and behavior modulation 191, 192
prospects for study 196, 197
signs 192, 193
neurobiology
hypothalamic-pituitary-adrenal axis interactions with inflammation and serotonin system 191
serotonin system 190
stress axis 190, 191
pharmacotherapy 189
risk factors 188, 189
symptoms and traits 193, 194
Sympathetic nervous system, neuroimmune communication 13, 14
Syphilis, history of central nervous system studies 50, 51
Systemic lupus erythematosus, suicidality studies 195
T cell function
affective disorders 77, 78
schizophrenia studies 102–105
Tryptophan metabolism, see also specific enzymes
bipolar disease studies 68
catabolites in inflammation 78, 79
depression studies 67, 68
overview 64–67
schizophrenia studies 68, 69, 105
Tumor necrosis factor-α
brain cell sources 62
depression therapeutic targeting 40
neurogenic inflammation modulation 26, 27
White matter hyperintensity, response to inflammation 181, 182
