Liver cancer has a very high prevalence among cancers in general and is one of the most common causes of death worldwide. Based on these facts, the journal *Liver Cancer* serves the growing need to better understand the causes, mechanisms and therapy of the malignancy. It provides the international community of researchers and clinicians with a platform for their research results, focusing on molecular carcinogenesis, prevention, surveillance, diagnosis and treatment, including molecular targeted therapy, of the disease. *Liver Cancer* publishes clinical and translational research related to the field of liver cancer in both humans and experimental models in the form of review articles.

### Contents of the first issue

- Welcome to the First Issue of Liver Cancer: Kudo, M. (Osaka)
- Epidemiology and Surveillance of Hepatocellular Carcinoma: Kim, D.Y.; Han, K. (Seoul)
- Recent Advances in CT and MR Imaging for Evaluation of Hepatocellular Carcinoma: Lee, J.; Yoon, J.H.; Joo, I.; Woo, H.S. (Seoul)
- Chemoembolization in Patients with Hepatocellular Carcinoma: Lencioni, R. (Pisa)
- Noninvasive Diagnosis of Hepatocellular Carcinoma in Cirrhotic Liver: Current Guidelines and Future Prospects for Radiological Imaging: Ricke, J.; Seidensticker, M.; Mohnike, K. (Magdeburg)

### Submission of papers

The editor cordially invites you to submit your clinical review paper to Liver Cancer. Manuscripts written in English should be submitted to the Editorial Assistant, Ms. Tanja Sebuk: t.sebuk@karger.ch

Contents

Introduction
Molecular Targeted Therapy for Hepatocellular Carcinoma: Bench to Bedside: Kudo, M.

Molecular Pathogenesis of Hepatocellular Carcinoma: Altering Transforming Growth Factor-β Signaling in Hepatocarcinogenesis: Yamazaki, K.; Masugi, Y.; Sakamoto, M.

Signaling Pathway and Molecular-Targeted Therapy for Hepatocellular Carcinoma: Kudo, M.

Molecularly Targeted Therapies for Hepatocellular Carcinoma: Sorafenib as a Stepping Stone: Kim, H.Y.; Park, J.-W.

mTOR Inhibitor for the Treatment of Hepatocellular Carcinoma: Kudo, M.

Future Treatment Option for Hepatocellular Carcinoma: A Focus on Brivanib: Kudo, M.

Management of Patients with Hepatocellular Carcinoma and Extrahepatic Metastasis: Lee, H.-S.

Great progress in molecular biology, therapeutics, imaging as well as surgery have vastly improved the understanding and treatment of childhood liver disorders. In particular, surgical advancements in liver transplantation currently allow for a lower age or weight limit for recipients. Furthermore, the majority of children with liver disease or with liver transplantation today survive well into adulthood.

In this book, world experts in the now established subspecialty of pediatric hepatology provide a comprehensive summary of the latest advances in pathophysiology, molecular diagnostics and treatment strategies. Day-to-day management of liver transplant recipients as well as psychosocial aspects and complications during the challenging transition phase to adulthood are discussed in detail. This up-to-date overview will be an invaluable tool for trainees in pediatric gastroenterology, a ready reference for busy clinicians and nurses or allied health professionals involved in the care of children with liver disease and after liver transplantation.

Contents

Each issue of this journal is dedicated to a special topic of current interest, covering both clinical and basic science topics in gastrointestinal function and disorders. The contents of each issue are comprehensive and reflect the state of the art, featuring editorials, reviews, mini reviews and original papers. These individual contributions encompass a variety of disciplines including all fields of gastroenterology. Digestive Diseases bridges the communication gap between advances made in the academic setting and their application in patient care. The journal is a valuable service for clinicians, specialists and physicians-in-training.
