Recent Advances in Hereditary Angioedema Self-Administration Treatment
Summary of an International Hereditary Angioedema Expert Meeting

Guest Editor
Timothy J. Craig, Hershey, Pa.
The skin is one of the most frequently involved organs in adverse drug reactions. Occurring with an incidence of 1–5% for certain types of drugs, cutaneous drug eruptions are mostly benign in nature, and comprise the maculopapular type of eruption and urticaria. However, about one third of them require hospital treatment, leading to a considerable burden for the health care system.

In this book, a selected group of experts provide an up-to-date, condensed and clinically relevant overview of the field of cutaneous drug eruptions, ranging from epidemiology and genetic predisposition to available therapeutic measures, including rapid drug desensitization. Reflecting the great progress made in recent years in this field, this publication will be a useful tool for a better understanding, diagnosis and management of cutaneous drug eruptions, not only for general physicians, dermatologists and clinical allergologists, but also for nurses and scientists.
Guidelines for Authors

International Archives of Allergy and Immunology

‘International Archives of Allergy and Immunology’ appears monthly and provides a forum for publication of work from all aspects of modern allergology and immunology. Papers considered of special interest will be treated as ‘hot topics’ and every attempt will be made to publish these especially fast. The Editor-in-Chief, the Managing Editor and a team of internationally established Associate Editors competently covering all fields of allergology and immunology are responsible for the scientific quality of this international core journal. *International Archives* publishes original work in the fields of allergy, immunopathology and transplantation, cellular immunology, immunogenetics, immunopharmacology and immunoenocrinology, mucosal immunity, immunology of infectious diseases including an abstract, essential references and with significant new insights or with an extremely unusual and memorable course. Highlighted boxes contain more than 3 figures.

Review articles, minireviews, opinion articles, controversies and commentaries: Authors who wish to contribute a manuscript to one of these categories should contact the Editor-in-Chief. Minireviews should be focused, brief reports on topics of current interest. Commentaries should offer a more personalized perspective on a topic that will be of interest to the general readership. All contributions to these categories will be subject to Editorial review.

Letters to the Editor: concerning work published in the journal may be submitted. They should not exceed 2 manuscript pages including one table or figure.

Conditions

All manuscripts are subject to editorial review. Manuscripts are received with the explicit understanding that they are not under simultaneous consideration by any other publication. A cover letter with the name, address, and telephone and telefax numbers of the corresponding author must accompany each manuscript. This letter must include a statement that affirms that all authors agree with the submission. Submission of an article for publication implies the transfer of the copyright from the author to the publisher upon acceptance. Accepted papers become the permanent property of *International Archives of Allergy and Immunology* and may not be reproduced by any means, in whole or in part, without the written consent of the publisher. It is the author’s responsibility to obtain permission to reproduce illustrations, tables, etc. from other publications. One of the criteria considered in reviewing manuscripts is the proper treatment of animals. In particular, the use of painful or otherwise noxious stimuli must be carefully and thoroughly justified. Papers that do not meet these criteria will not be accepted for publication.

Conflict of Interest

Authors are required to disclose any sponsorship or funding arrangements, including that from companies, relating to their research. All authors should disclose any possible conflicts of interest in the cover letter to the editor and at the end of the article.

Plagiarism Policy

Whether intentional or not, plagiarism is a serious violation. We define plagiarism as a case in which a paper reproduces another work with at least 25% similarity and without citation. If evidence of plagiarism is found before/after acceptance or after publication of the paper, the author will be offered a chance for rebuttal. If the arguments are not found to be satisfactory, the manuscript will be retracted and the author sanctioned from publishing papers for a period to be determined by the responsible Editor(s).

Arrangement

Manuscripts should be written in English and be as concise as possible. Be sure to display line numbers (1, 2, 3, and so forth) in the left margin of the manuscript (line numbering can be added from the Page Setup or Format menu of word processing programs). The line numbering should be continuous throughout the entire manuscript, from the title page through to the final page (i.e., do not begin numbering from 1 again at the top of each page).

Title page: The first page of each paper should indicate a concise title, the authors’ full names, affiliations and e-mail addresses, the institute where the work was conducted, and a short title for use as running head.

Full address: The exact postal address of the corresponding author complete with postal code must be given at the bottom of the title page. Please also supply phone and fax numbers, as well as an e-mail address.

Key words: Please supply 3–10 key words in English that reflect the content of the paper.

Abstract: Provide on a separate page an abstract of not more than 250 words. This abstract should consist of four paragraphs, labeled Background, Methods, Results, and Conclusions. They should briefly describe, respectively, the problem being addressed in the study, how the study was performed, the salient results, and what the authors conclude from the results.

The text should be arranged in the following sections: Introduction, Material and Methods, Results, Discussion, Acknowledgement, References.

Footnotes: Avoid footnotes. When essential, they are numbered consecutively and typed at the foot of the appropriate page.

Tables and illustrations: Tables and illustrations (both numbered in Arabic numerals) should be prepared on separate pages. Tables require a heading and figures a legend, also prepared on a separate page. For the reproduction of illustrations, only good drawings and original photographs can be accepted; negatives or photocopies cannot be used. Due to technical reasons, figures with a screen background should not be submitted. When possible, group several illustrations on one block for reproduction (max. size 180 x 223 mm) or provide crop marks. Each illustration must be labeled with its number and the author’s name. Electronically submitted b/w half-tone and color illustrations must have a final resolution of 300 dpi after scaling (final size), line drawings one of 800–1,200 dpi. Figure files must not be embedded in a document file but submitted separately (see detailed instructions at www.karger.com/iaa/).

Color illustrations

Online edition: Color illustrations are reproduced free of charge. In the print version, the illustrations are reproduced in black and white. Please avoid referring to the colors in the text and figure legends.

Print edition: Up to 6 color illustrations per page can be integrated within the text at CHF 800.– per page.

Abbreviations: Avoid overuse of abbreviations. Introduce an abbreviation only when the same term occurs three or more times.
Contents

See the journal website for contents
The biomedical themes of the Karger Gazette are topical, urgent, exciting. Its articles, written by experts from all over the world, provide a wide audience with the basic issues, new findings and controversies in a lively and readable style. Alongside invited contributions, each number carries attractively presented support material, such as informative graphics, historical summaries, interviews, or portraits of individuals and institutions. The Karger Gazette is published in newspaper format and appears once a year.

And what’s more – it’s free!

To see behind the cover, please write or e-mail us, and we’ll start your subscription with the latest issue.

The Aging Issue

Read about the causes of the aging process, why aging stops in later adult life, the quiet epidemic of Alzheimer’s Disease, internet use by seniors, and more.
AS VESALIUS

The Fabric
of the Human Body

An Annotated Translation of the 1543 and 1555 Editions of "De Humani Corporis Fabrica" by

DANIEL H. GARRISON
MALCOLM H. HAST

- Modern layout enables the 21st-century reader to understand the complexity and pioneering nature of this milestone in medical history without the need of knowing Latin
- Different colors allow easy identification of notes relevant to both the 1543 and the 1555 editions
- Added notes for a never published third edition
- Up-to-date design and high-resolution digital scans of the woodcuts
- Nomina Anatomica and Terminologia Anatomica for the first time included to provide Vesalius' descriptions with modern medical terminology
- Prefaces by the translators and introductions by medical historians Vivian Nutton and Nancy Siraisi

Special pre-publication offer until September 2013

Focusing on research on common and rare genetic syndroms

Molecular Syndromology

Selected contributions
• In-Frame Deletion and Missense Mutations of the C-Terminal Helicase Domain of SMARCA2 in Three Patients with Nicolaides-Baraitser Syndrome: Wolff, D.; Endelev, S.; (Erlangen); Azzarello-Burri, S.; (Schwerzenbach); Hoyer, J.; Zweier, M.; Schanze, I.; (Erlangen); Schmitt, B.; (Dachau); Rauch, A.; (Schwerzenbach); Reis, A.; Zweier, C.; (Erlangen)
• LEOPARD Syndrome Caused by Tyr279Cys Mutation in the PTPN11 Gene: Martínez-Quintana, E.; Rodríguez-González, F.; (Las Palmas de Gran Canaria)
• Molecular and Clinical Aspects of Angelman Syndrome: Dagli, A.; (Gainesville, Fla.); Buiting, K.; (Eisen); Williams, C.A.; (Gainesville, Fla.)
• The 22q13.3 Deletion Syndrome (Phelan-McDermid Syndrome): Phelan, K.; (New Orleans, La.); McDermid, H.E.; (Edmonton, Alta.)
• First Report of a Single Exon Deletion in TCOF1 Causing Treacher Collins Syndrome: Beygo, J.; Buiting, K.; Seland, S.; Lüdecke, H.-J.; (Eisen); Hehr, U.; (Regensburg)
• Differences in Copy Number Variation between Discordant Monozygotic Twins as a Model for Exploring Chromosomal Mosaicism in Congenital Heart Defects: Breckpot, J.; (Leuven); Thienpont, B.; (Leuven/Cambridge); Gewillig, M.; Allegraet, K.; Vermeesch, J.R.; Devriendt, K.; (Leuven)
• Osteogenesis Imperfecta: A Review with Clinical Examples: Van Dijk, F.S.; Cobben, J.M.; (Amsterdam); Kariminejad, A.; (Tehran); Maugeri, A.; (Amsterdam); Nikkels, P.G.J.; (Utrecht); van Rijn, R.R.; Pals, G.; (Amsterdam)
• Severe Developmental Delay in a Patient with 7p21.1–p14.3 Microdeletion Spanning the TWIST Gene and the HOXA Gene Cluster: Fryssira, H.; (Athens); Makrythanasis, P.; (Geneva); Kattamis, A.; Stokidis, X.; (Athens); Menten, B.; (Ghent); Kosaki, K.; (Tokyo); Willems, P.; (Antwerp); Kanavakis, E.; (Athens)
The journal’s aim is to increase the distribution of scientific knowledge in the new discipline of medical epigenetics. Epigenetics, a rapidly emerging scientific discipline, seeks to define how the genome is regulated to produce distinct normal and diseased phenotypes. Epigenomics, the genome-wide application of epigenetic techniques, is at the core of systems biology extending the power of genomics, proteomics, and other high throughput techniques for the analyses of complex phenotypes.

The journal Medical Epigenetics seeks to catalyze discoveries and genome-wide applications in the areas of gene regulation, chromatin dynamics, and epigenetic inheritance to disease-oriented research. Articles will be focused on disseminating scientific advances and applications of this field to mapping DNA methylation, histone modifications, chromatin accessibility and small RNA transcripts in cells, tissues and organ systems frequently involved in human disease. This journal is also committed to support development, standardization and sharing of protocols, reagents and analytical tools to enable the research community to utilize, integrate and expand upon this new exciting biomedical discipline.
Towards a holistic way of understanding and treating asthma and allergy

Allergy and the Nervous System

Editor
John Bienenstock

In recent decades, it has become increasingly clear that the immune and nervous systems communicate with each other in a bidirectional way. The role of chronic stress in allergic disease and inflammation has been confirmed and raises the important question of how psychosocial factors influence the outcome of allergic conditions. This book explains the roles of the autonomic, peripheral and central nervous systems in allergy and asthma. With contributions from leading authorities – both clinicians and basic researchers – it covers a wide range of topics from psychology over epigenetics to brain imaging. The 15 invited reviews discuss topics such as the role of stress in allergy and asthma, the concept of programming in utero and in childhood and adulthood, the significance of neurotrophins, and the involvement of the nervous system in the lung in asthma and lung inflammation. The interactions between mast cells and the nervous system are examined as well as the role of the gut microbiome in regulating the hypothalamic-pituitary-adrenal axis and the stress response. Further chapters are devoted to neural and behavioral changes associated with food allergy, the role of the neuroendocrine system in the skin, and the way in which itch is processed by the brain.

Unique in its field, this valuable volume is recommended reading not only for allergologists, psychologists specializing in allergy and somatic manifestations, respirologists and asthma researchers, but for anyone interested in psychoneuroimmunology.

Contents

Preface: Bienenstock, J.

Relations between Asthma and Psychological Distress: An Old Idea Revisited: Van Lieshout, R.J.; MacQueen, G.M.

The Brain and Asthma: What Are the Linkages?: Busse, W.W.

Stress-Related Programming of Autonomic Imbalance: Role in Allergy and Asthma: Wright, R.J.

Role of Parasympathetic Nerves and Muscarinic Receptors in Allergy and Asthma: Scott, G.D.; Fryer, A.D.

Developmental Programming of Allergic Diseases: PinCUS, M.; Arck, P.

Mind-Body Interrelationship in DNA Methylation: SzFY, M.

Neurotrophins in Chronic Allergic Airway Inflammation and Remodeling: Renz, H.; Kiliç, A.

Pathways Underlying Afferent Signaling of Bronchopulmonary Immune Activation to the Central Nervous System: Hale, M.W.; Rook, G.A.W.; Lowry, C.A.

Allergen-Induced Neuromodulation in the Respiratory Tract: Weigand, L.A.; Undem, B.J.

Role of Microbiome in Regulating the HPA Axis and Its Relevance to Allergy: Sudo, N.

Autonomic Regulation of Anti-Inflammatory Activities from Salivary Glands: Mathison, R.D.; Davison, J.S.; St. Laurent, C.D.; Befus, A.D.

The Mast Cell-Nerve Functional Unit: A Key Component of Physiologic and Pathophysiologic Responses: Forsythe, P.; Bienenstock, J.

Neural and Behavioral Correlates of Food Allergy: Costa-Pinto, F.A.; Basso, A.S.

The Neuroendocrine-Immune Connection Regulates Chronic Inflammatory Disease in Allergy: Peters, E.M.J.
