**Guidelines for Authors**

### Aims and Scope
This highly respected and frequently cited journal is a prime source of information in the area of fetal and neonatal research. Original papers present research on all aspects of neonatology, fetal medicine and developmental biology. These papers encompass both basic science and clinical research including randomised trials, observational studies and epidemiology. Basic science research covers molecular biology, molecular genetics, physiology, biochemistry and pharmacology in fetal and neonatal life. Papers reporting results of animal studies should be based upon hypotheses that relate to developmental processes or disorders in the human fetus or neonate.

**Submission**
Manuscripts written in English should be submitted using the online submission website at: [www.karger.com/neo](http://www.karger.com/neo)

Should you experience any problems with your submission, please contact:

neo@karger.com

S. Karger AG
Editorial Office 'Neonatology'
P.O. Box
CH–4009 Basel (Switzerland)

All manuscripts must be accompanied by a cover letter and a statement with all authors' signatures (handwritten) saying that they agree with the publication of the paper. Names, postal and e-mail addresses of four international experts in the appropriate area of research should accompany each manuscript. Selected scientists (s) will be invited to act as referee(s). Referees suggested should not be from the same institution as the author and should have expert knowledge of the subject.

Manuscripts may be submitted to the following sections:
- Editorials
- Reviews
- Original Papers
- Consensus Statements
- Short Communications
- Novel Insights from Clinical Practice
- Commentaries
- Research Briefings
- Sources of Neonatal Medicine
- Letters to the Editor

**Reviews**
Most reviews are submitted upon invitation. However, the editors are open to unsolicited reviews. Authors planning such a review are requested to contact the Editorial Office with a one page outline of the intended review. All reviews are subject to peer review. Systematic reviews should be reported using the format of the Cochrane Neonatal Review Group (www.neonatal.cochrane.org/welcome).

**Original Papers**
Original articles should not exceed a printed length of 1,400 words comprised of text accompanied by not more than 4–6 figures or tables and be from 5 to 10 refereed pages.

**Novel Insights from Clinical Practice**
(formerly Case Reports)
The publication space available for case reports is very limited. The journal only considers case reports with significant new insights or with an extremely unusual and memorable course. Highlighted boxes containing one or two bullet points on 'Established Facts' (what is already known) and 'Novel Insights' (what new information has been gained) are required and should be placed on the first page of the report. These should be selected so as to reinforce the novelty of the clinical observation. The manuscript should be presented with an abstract (unstructured, max. 150 words), followed by introduction, case report and discussion. Maximum 2 figures or 1 tables or 1 figure and 1 table.

**Conditions**
All manuscripts are subject to editorial review. Manuscripts are received with the explicit understanding that they are not under simultaneous consideration by any other publication. Submission of an article for publication implies the transfer of the copyright from the author to the publisher upon acceptance. Accepted papers become the permanent property of Neonatology and may not be reproduced by any means, in whole or in part, without the written consent of the publisher. It is the author's responsibility to obtain permission to reproduce illustrations, tables, etc. from other publications.

**Conflict of Interest:**
All forms of support, including that from drug companies, and any potential source of conflict of interest should be acknowledged in the cover letter to the editor when applicable. The statement will be printed at the end of the article.

**Ethics:**
Published research must comply with the guidelines for human studies and animal welfare regulations. Authors should state that subjects have given their informed consent and that the study protocol has been approved by the institute's committee on human research. Further, they should also state that animal experiments conform to institutional standards.

**Arrangement**
**Title Page:** The first page of each paper should indicate the title, the authors' names, the institute where the work was conducted, and a short title for use as running head.

**Line Numbering:**
Lines should be numbered (1, 2, 3, etc.) and displayed in the left margin of the manuscript (line numbering should be continuous throughout the entire manuscript (i.e., do not begin numbering from 1 again at the top of each page).

**Full address:**
The exact postal address of the corresponding author complete with postal code must be given at the bottom of the title page. Please also supply phone and fax numbers, as well as e-mail address.

**Key words:**
Please supply 3–10 key words in English that reflect the content of the paper.

**Abstract:**
Each paper needs an abstract of up to 250 words. It should be structured as follows:

- **Background:**
- **Objectives:**
- **Methods:**
- **Results:**
- **Conclusions:**

**Footnotes:** Avoid footnotes.

**Tables and illustrations:**
Tables and illustrations (both numbered in Arabic numerals) should be prepared on separate pages. Tables require a heading and figure legends should be supplied on a separate page. For technical reasons, figures with a screen background should not be submitted. Therefore, several illustrations on one page are possible. On inclusion of color, provide the statements for manuscripts submitted to biomedical journals (www.icmje.org).

**Examples**

(b) Papers published only with DOI numbers: Allfah K, Anabress I, Basler D: Probiotics reduce the risk of necrotizing enterocolitis in preterm infants: a meta-analysis. Neonatology DOI: 10.1159/000235684.

**SI Units**
SI units should be used. Listings of SI units may be found in the following publications:

Supplementary Material

Supplementary material is restricted to additional data that are not necessary for the scientific integrity and conclusions of the paper. Please note that all supplementary files will undergo editorial review and should be submitted together with the original manuscript. The Editors reserve the right to limit the scope and length of the supplementary material. Supplementary material must meet production quality standards for Web publication without the need for any modification or editing. In general, supplementary files should not exceed 10 Mb in size. All figures and tables should have titles and legends and all files should be supplied separately and named clearly. Acceptable files and formats are: Word or PDF files, Excel spreadsheets (only if the data cannot be converted properly to a PDF file), and video files (.mov, .avi, .mpeg).

Author’s Choice™

Karger’s Author’s Choice™ service broadens the reach of your article and gives all users worldwide free and full access for reading, downloading and printing at www.karger.com. The option is available for a one-time fee of CHF 3000.–, which is a permissible cost in grant allocation. More information can be found at www.karger.com/authors_choice.

NIH-Funded Research

The U.S. National Institutes of Health (NIH) mandates under the NIH Public Access Policy that final, peer-reviewed manuscripts appear in its digital database within 12 months of the official publication date. As a service to authors, Karger submits the final version of your article on your behalf to PubMed Central. For those selecting our premium Author’s Choice™ service, we will send your article immediately upon publishing, accelerating the accessibility of your work without the usual embargo. More details on NIH’s Public Access Policy are available at http://publicaccess.nih.gov/policy.htm

Self-Archiving

Karger permits authors to archive their pre-prints (i.e. pre-refereeing) or post-prints (i.e. final draft post-refereeing) on their personal or institution’s servers, provided the following conditions are met: Articles may not be used for commercial purposes, must be linked to the publisher’s version, and must acknowledge the publisher’s copyright. Authors selecting Karger’s Author’s Choice™ feature, however, are also permitted to archive the final, published version of their article, which includes copy-editing and design improvements as well as citation links.

Page Charges

A charge of CHF 60.– per page (except for invited reviews which are free) will be levied for the first 3 printed pages of an article. Each additional complete or partial page will be charged to the author at CHF 325.–. 3 printed pages are equal to approx. 9 manuscript pages (including tables, illustrations and references).

Proofs

Proofs are sent to the corresponding author and should be returned with the least possible delay. Alterations other than the correction of printer’s errors are charged to the author.

Reprints

Order form and price list is sent with the pdf proofs. Orders submitted after the issue is printed are subject to considerably higher prices.

Nestlé Nutrition Institute Workshop Series

In 1981, ‘Nestlé Nutrition’ was created with the aim of improving and disseminating knowledge on health and nutrition, as well as providing scientific information to the medical profession. Initially, ‘Nestlé Nutrition’ consisted of the present book series ‘Nestlé Nutrition Workshop Series: Pediatric Program’, which since 1997 has been extended to include also the ‘Nestlé Nutrition Workshop Series: Clinical & Performance Program’. Both book series are now available at S. Karger Scientific Publishers. One of the major components of these series is the organization of workshops and the publication of the proceedings. Each workshop focuses on the latest findings, the controversies and further research needs concerning topics in nutrition.

NEO: The Conference for Neonatology addresses cutting edge, yet practical aspects of newborn medicine. Educational sessions are conducted by many of the foremost experts, who address neonatal-perinatal topics for which they have become renowned.

Target audience: All neonatal-perinatal providers, including neonatologists, advanced practitioners and staff nurses.

Topics include:

- Getting Started on the Right Foot — The Early Care of the Critically Ill Neonate
- Respiratory Support 2014 — What Do You Do, When Do You Do It?
- Neurological Injury in the Neonate
- Nutrition and the Neonate
- The Fetal Patient

SPECIAL INTERACTIVE SESSION: Surviving the NICU — Parents’ Perspectives

Specialty Review in Neonatology, the leading review of its type in the country, is an intensive and comprehensive review of neonatal medicine. This course is an invaluable learning experience for those preparing for certifying examinations, as well as new or current fellows-in-training seeking an outstanding fundamental pathophysiology course in neonatal-perinatal medicine.

Target audience: Neonatologists, residents, fellows and advanced practitioners.

Topics include:

- Maternal-Fetal Medicine
- Neonatal Respiratory System
- Neonatal Cardiovascular System
- Neonatal Endocrinology
- Neonatal Nephrology
- Neonatal Infectious Diseases
- Central Nervous System

Hematological disorders in children and adolescents pose a wide range of management challenges and treatment dilemmas.

In this book, an internationally acclaimed panel of authors, each chosen for expertise in their field, have produced a state-of-the-art collection of review articles focusing on the very latest advances and controversies in the management of pediatric and adolescent hematological problems. The whole range of benign and malignant, congenital and acquired, acute and chronic conditions is discussed in detail.

Individual chapters cover hematologic problems on the pediatric intensive care unit, treatments for iron deficiency and ITP; advances in stem cell transplantation, gene therapy, novel pharmaceutics and molecular diagnostics, as well as transition from child to adult are also explored.

Providing an up-to-date look at both specific hematologic disorders in the pediatric and adolescent population and also hematological problems that arise in association with systemic disease, this book is essential reading not only for pediatric and adult hematologists but also for pediatricians, pediatric or hematologic specialist nurse practitioners and pediatric pharmacologists.
Nutrition and Growth

Editors
R. Shamir
D. Turck
M. Phillip

Challenges in infancy and childhood

Growth as an indicator of health is more sensitive than commonly believed and can serve as an early sign of imbalance, before other malfunctions manifest themselves. Particularly in developing countries, growth failure in infants and children is related to mortality, morbidity and impaired brain development, and increases the risk of adult-onset non-communicable diseases.

This publication focuses on the challenges of the interaction between nutrition and growth in the pediatric age group. Subjects covered include the interplay between nutrition and the IGF axis; early feeding and later growth; growth charts (including an update on the implementation of the WHO growth standards); various aspects of obesity; nutrition and growth of premature infants and of children with specific diseases; and the interaction between bone health, nutrition and growth.

Containing lectures from the ‘1st International Conference on Nutrition and Growth’ (Paris 2012), this book is a valuable source of information for pediatricians, nutritionists, neonatologists, and experts in child development.

Contents

- Introduction: Shamir, R.; Phillip, M.; Turck, D.
- Lessons Learned from Clinical Studies on Infant Nutrition: Szaejewska, H.
- Growth Outcome: Nutritionist Perspective: Agostoni, C.; Fattore, G.
- Nutritional Biomarkers for Growth Outcomes: Perspective of the Endocrinologist: Yakobovitch-Gavan, M.; Gat-Yablonski, G.; Phillip, M.
- Early Nutrition and Later Outcomes in Preterm Infants: Embleton, N.D.
- Bone Mineral Accretion and Its Relationship to Growth, Sexual Maturation and Body Composition during Childhood and Adolescence: Zemel, B.
- Prenatal Nutritional Influence on Skeletal Development: Curtis, E.; Cheah, J.; Harvey, N.C.
- Insulin-Like Growth Factors, Nutrition and Growth: Savage, M.O.
- Role of Insulin-Like Growth Factors in Growth, Development and Feeding: Wirt, J.M.; Walenkamp, M.J.
- Advances in Growth Chart Design and Use: The UK Experience: Wright, C.M.; Williams, A.F.; Cole, T.J.
- Growth Chart Expert Group
- Update on the Implementation of the WHO Child Growth Standards: de Onis, M.
- Nutritional Catch-Up Growth: Gat-Yablonski, G.; Pando, R.; Phillip, M.
- Growth Faltering in Low-Income Countries: Prentice, A.M.; Moore, S.E.; Fulford, A.J.
- Catch-Up Growth: Cellular and Molecular Mechanisms: Finkielstain, G.P.; Lui, J.C.; Baron, J.
- Treatment Options for Children with Monogenic Forms of Obesity: Hainerová, I.A.; Lebl, J.
- Early Diet, Insulin-Like Growth Factor-1, Growth and Later Obesity: Michaelsen, K.F.; Larnkjær, A.; Molgaard, C.
- Obesity Prevention in Children: Moreno, L.A.; Bel-Serrat, S.; Santaliestra-Pasias, A.M.; Rodriguez, G.
- Growth Trajectories Associated with Adult Obesity: Rolland-Cachera, M.F.; Péneau, S.
- Obesity and Growth during Childhood and Puberty: Marcovecchio, M.L.; Chiarelli, F.
- Pathophysiology and Management of Abnormal Growth in Children with Chronic Inflammatory Bowel Disease: Ahmed, S.F.; Farquharson, C.; McGrogan, P.; Russell, R.K.
- Optimal Growth of Preterm Infants: Corpeleijn, W.E.; Kouwenhoven, S.M.P.; van Goudoever, J.B.
- Nutrition and Growth in Inflammatory Bowel Disease: Shamir, R.
- Early Growth and Later Atherosclerosis: Singhal, A.
- Body Composition in Young Children with Cystic Fibrosis: Williams, J.E.
- Interaction between Weight and Medications in Psychological Illnesses of Children: Apter, A.; Steingart, L.
- Prematurity and Bone Health: Pietlau, C.; de Halleux, V.; Senterre, Th.; Rigo, J.

The medical revolution of the 16th century
brought to life for the 21st century

ANDREAS VESALIUS

The Fabric
of the Human Body

An Annotated Translation of the 1543 and 1555 Editions of
“De Humani Corporis Fabrica” by

DANIEL H. GARRISON
MALCOLM H. HAST

with contributions by Vivian Nutton and Nancy Siraisi

For the first time ever, both editions of Andreas Vesalius’
masterpiece “De Humani Corporis Fabrica” are accessible
in the English language. They were critically compared
and published in a modern layout transforming the
Renaissance anatomical atlas for the 21st-century reader.
More than 5,000 annotations cover anything from
antique sources over Galenic references to the medical
and cultural background of Vesalius’ time. Also included
are Vesalius’ handwritten notes for a never published
third edition.
To enable the reader and medical student to really study
Vesalius’ woodcut illustrations, the images were digitally
enhanced and often enlarged to feature his painstaking
work of marking each pertinent anatomical part with
characters. All over Vesalius’ descriptive text, the standard
Latin Nomina Anatomica and Terminologia Anatomica
provide the reader with the modern medical terminology.

Vesalius, A., The Fabric of the Human Body
An Annotated Translation of the 1543 and 1555 Editions of
“De Humani Corporis Fabrica Libri Septem” by
D.H. Garrison and M.H. Hast
