A new comprehensive edition of a standard work, detailing and illustrating the organization, structure, function and connectivity of all individual brainstem nuclei

Olszewski and Baxter’s Cytoarchitecture of the Human Brainstem
3rd, revised and extended edition

Editors
Jean A. Büttner-Ennever
Anja K.E. Horn

The new revised and extended edition of this standard work retains all the original and unique low- and high-power photographs which document the organization of the human brainstem as well as the individual character of the neurons of each nucleus. Many structural differences are described in neuronal groups, indicating as yet unrecognized functional differences. Furthermore unique details of the neuronal organization and cytoarchitecture are featured, providing clues to the functional properties of the cell groups and stimulating research projects.

Nomenclature and nuclear borders have been updated, in addition the text now contains new sections presenting an up-to-date summary of the functional neuroanatomy of each nucleus.

For neuroscientists and neurologists this atlas provides an invaluable and complete source of reference for both their scientific research and everyday clinical practice. Neuropathologists, neuroradiologists, neuropsychologists, neurosurgeons, physiologists and physicians will find the combination of low-power brainstem imaging with cytological, physiological and neuroanatomical data highly relevant. In addition the atlas offers researchers in other disciplines the opportunity to discover new correlations between structure and function, outlining new functional regions in the brainstem.

Main Contents
• Introduction
• Materials and Methods
• Alphabetical List of Nuclei, Abbreviations and Original Names

Plates of Serial Sections through the Human Brainstem

Chapters of Individual Nuclei
Sensory Systems
• Somatosensory Nuclei
• Trigeminal Complex
• Vestibular Nuclei
• Auditory Nuclei
• Auditory Nuclei
• Visual Nuclei
• Viscerosensory Nuclei

Motor Systems
• Somatomotor Nuclei
• Oculomotor Complex
• Visceromotor Nucleus

Reticular Formation

Neuromodulatory Systems
• Serotonergic Nuclei
• Noradrenergic Nuclei
• Cholinergic Nuclei
• Dopaminergic Nuclei

Limbic Nuclei

Precerebellar Nuclei

Nuclei of Unknown Function

Subject Index

Lung Carcinoma in the Era of Personalized Medicine: The Role of Cytology

Lung Cytopathology

Editors
Maureen F. Zakowski
Marluce Bibbo

This special issue of Acta Cytologica focuses on the role of cytology in influencing therapy, directing management, and uncovering new strategies in the complex field of non-small cell lung cancer (NSCLC). With the discovery of the activating mutations in the epidermal growth factor receptor in 2004, a new era of personalized medicine in lung cancer began. Along with these discoveries came a new approach to the care of the NSCLC cancer patient with a direct impact on the practice of cytopathology. In an attempt to guide the cytopathologist and offer strategies to navigate this new era, this issue brings together data and techniques from international experts in diagnostics, testing, epidemiology, and new discoveries. New techniques are highlighted, including expanded use of immunocytochemistry and fluorescent in situ hybridization and use of laser capture microdissection in cytology. A view from interventional radiology, so important in obtaining specimens from cancer patients, is presented and a novel algorithm incorporating microRNA detection in these specimens is discussed. Telecytology as a way to diagnose remotely is explored. A look at NSCLC from the Asian perspective, which has taught us much about mutations and epidemiology, is included. A unique perspective from cytotechnologists who are often at the ‘front line’ of the battle against this disease is presented. These papers provide an in-depth look at the state of the art, as well as a guide to the future of cytology in the era of personalized medicine.

Guidelines for Authors

Acta Cytologica is a bimonthly published journal that aims to cover all aspects within the area of both clinical cytology and cytopathology. It further the understanding of cyto logical processes and facilitates the trans lation of current research into clinical practice. As the official journal of the International Academy of Cytology and affiliated to over 50 cytology societies around the world, Acta Cytologica evaluates new and existing diagnostic applications of scientific advances as well as their clinical correlation. The journal features Original Papers (Fine Needle Aspiration, Gynecologic Cytopathology, Nongynecologic Cytopathology, Techniques, Molecular Techniques), Novel Insights from Clinical Practice (formerly Case Reports), Letters to the Editor and Reviews. Criteria for acceptance are quality, originality, and clarity. Acta Cytologica will not consider papers that are either preliminary or purely descriptive. Reports on clinical cases are accepted only if they provide novel insight into unresolved problems of cytology and cytopathology. All articles are subject to editorial review.

Submission
Only original papers written in English are considered. Manuscripts should be submitted online using the online submission website at www.karger.com/acy (the preferred word-processing package is MSWord®). Before submitting your manuscript, you are encouraged to read the detailed guidelines at www.karger.com/acy_guidelines for specific directions as how to get a manuscript ready for submission. If you should have any problems with your submission, please contact the editorial office.

Tel. +41 61 306 1437
Fax. +41 61 306 1434
E-Mail acy@karger.com

Conditions
All manuscripts must be accompanied by a covering letter signed on behalf of all authors verifying that all the authors were active participants. Assurance should be given that the manuscript is original and not under simultaneous consideration for publication in another journal. Please provide complete financial disclosure information. Presentation of manuscripts should conform with the Uniform Requirements for Manuscripts Submitted to Biomedical Journals (see N Engl J Med 1997;336:309–315). All articles will undergo an in-depth peer-review process. Submission of an article for publication implies the transfer of the copyright from the author to the publisher upon acceptance. Accepted papers become the permanent property of Acta Cytologica and may not be reproduced by any means, in whole or in part, without the written consent of the publisher. It is the author’s responsibility to obtain permission to reproduce illustrations, tables, etc. from other publications. Signed permission forms from the copyright holders and original authors for all previously published tables or figures must be provided.

Sections
Original Paper (Fine Needle Aspiration, Gynecologic Cytopathology, Nongynecologic Cytopathology, Techniques, Molecular Techniques); Submitted manuscripts should be fully documented reports of original research. They must describe significant and original observations.

Review: Potential authors are asked to contact the Editor-in-Chief before submitting a paper in order to avoid clashes with other pending reviews.

Letter to the Editor: Letters to the Editor concerning articles published in Acta Cytologica may be submitted for publication. They should not be more than one printed page in length. If accepted, the authors of the articles concerned will be given the opportunity to reply.

Novel Insights from Clinical Practice (formerly Case Reports): the publication space available for case reports is very limited. The journal only considers case reports with significant new insights or with an extremely unusual and memorable course. Highlighted boxes containing one or two bullet points on ‘established facts’ (what is already known) and ‘novel insights’ (what new information has been added) should be placed on the first page of the report. These should be selected so as to reinforce the novelty of the clinical observation.

Arrangement
General: Manuscripts should be written in English and be as concise as possible. The length of the text should be limited to approximately 3,000 words, pages numbered consecutively, starting with the title page, and continuing in the following order: abstract and key words, body of text, references, figure legends and tables. Use generic names of drugs when possible. For any trade name cited, capitalize the first letter, and include the manufacturer’s name and city (location, state/province, country). Express weights and measures in metric values. Acknowledge any presentation at a national or international medical society and any substantive financial support.

Title page: The first page of each paper should indicate the title, the authors’ names, the institute(s) where the work was conducted, and a short title for use as running head. Limit the number of authors to 6. If more than 6 authors contributed significantly to the article, the editorial office will consider including their names upon request.

Full address: The exact postal address of the corresponding author complete with postal code must be given at the bottom of the title page. Please also supply phone and fax numbers, as well as an e-mail address.

Key words: For indexing purposes, a list of 3–10 key words in English is essential.

Abstract: Each paper needs an abstract limited to 200 words structured as follows: Objective, Study design, Results, and Conclusions. For Novel Insights from Clinical Practice the headings should be: Background, Case and Conclusion. Address the study's power to detect a difference if the research identified important variables that lacked a statistically significant difference.

Footnotes: Footnotes should be avoided. When essential, they are numbered consecutively and typed at the foot of the appropriate page.

Materials and Methods: Acknowledge that the original research was approved by the local institutional review board. Clearly state the method of any randomization, blinding and selection of specific statistical tests. Explain drop-outs/exclusions and confounding variables.

Tables and illustrations: Tables and illustrations (both numbered in Arabic numerals) should be prepared on separate pages. Tables require a heading and figures a legend, also prepared on a separate page. Due to technical reasons, figures with a screen background should not be submitted. When possible, group several illustrations in one block if possible; maximum size 180 × 222 mm or provide crop marks. Each illustration must be labelled with its number and the first author's name. Electronically submitted b/w half-tone and color illustrations must have a final resolution of 300 dpi after scaling (final size), line art drawings one of 800–1,200 dpi. Do not modify a low-resolution image by increasing the dpi. Figure files should not be embedded in a document file but submitted separately. All illustrations must include the original magnification and the stain employed, and clearly identify the level of resolution and any magnification. Provide sufficient information for a table to stand alone. Avoid tables in which the data could be included in the text in a few sentences.

References: In the text identify references by Arabic numerals [square brackets]. Material submitted for publication but not yet accepted should be noted as [unpublished data] and not be included in the reference list. The list of references should include only those publications which are cited in the text. In general, avoid listing unpublished data or manuscripts, personal communications, web sites and non-peer-reviewed publications. Do not alphabetize; number references in the order in which they are first mentioned in the text. The surnames of the authors followed by initials should be used. There should be no punctuation other than a comma to separate the authors. Preferably, please cite all authors. Abbreviate journal names according to the Index Medicus. Also see International Committee of Medical Journal Editors: Uniform requirements for manuscripts submitted to biomedical journals (www.icmje.org). Authors using EndNote® may choose the bibliography format setting for Intervirology for the correct format of references.

Examples
(b) Papers published only with DOI numbers: Thehadizes TC, Boucher W, Searl K. Serum interleukin-6 reflects disease severity and osteoporosis in mastocytosis patients. Int Arch Allergy Immunol DOI: 10.1159/000263858.

Color Illustrations
For all manuscripts accepted, authors will be charged CHF 500.00 for each color page published in the print version of the journal. Several color illustration may be placed onto one color page. When the illustration appears in black and white in the printed version, the authors will not be charged a fee. In the online version all figures submitted in color will appear in color at no charge to the author. Referring to colors in the text and figure legends should be avoided. We recommend using symbols, instead of color, for charts and graphs.

Ethics
Published research must comply with the guidelines for human studies and animal welfare regulations. Authors should state that subjects have given their informed consent and that the study protocol has been approved by the institute’s committee on human research and thus meets the standards of the Declaration of Helsinki in its revised version of 1975 and its amendments of 1983, 1989, and 1996 [JAMA 1997;277:925–926]. Information suitable to
The Fabric
Transforming Vesalius
The medical revolution of the 16th century brought to life for the 21st century

An Annotated Translation of
ANDREAS VESALIUS
For details see Vesalius website
Postage and handling included
CHF 1,500.– / EUR 1,250.– / USD 1,650.00
12 × 17 " / 315 × 435 mm, 16 kg / 35 lbs
hard cover, with slip case, 2014
CXX + 1338 p., 340

features his painstaking work of marking each
study Vesalius' woodcut illustrations, the images
more than 5,000 annotations cover anything from
antique sources over Galenic references to the
medical and cultural background of Vesalius' time.
To enable the reader and medical student to really study Vesalius’ woodcut illustrations, the images
were digitally enhanced and often enlarged to feature his painstaking work of marking each pertinent anatomical part with characters. All over Vesalius' descriptive text, the standard Latin Nomina Anatomica and Terminologia Anatomica provide the reader with the modern medical terminology.

For the first time ever, both editions of Andreas Vesalius' masterpiece "De Humani Corporis Fabrica" are accessible in the English language. They were critically compared and published in a modern layout transforming the Renaissance anatomical atlas for the 21st-century reader. More than 5,000 annotations cover anything from antique sources over Galenic references to the medical and cultural background of Vesalius’ time.

Guidelines for Authors

Self-Archiving
Karger permits authors to archive their pre-prints (i.e.
pre-refereeing) or post-prints (i.e. final draft post-refereeing) on their personal or institution's servers, provid-
ed the following conditions are met: Articles may not be
used for commercial purposes, must be linked to the pub-
lisher's version, and must acknowledge the publisher's
copyright. Authors selecting Karger's Author's Choice™
feature, however, are also permitted to archive the final,
published version of their article, which includes copy-
editing and design improvements as well as citation links.

Copy Editing
All manuscripts accepted for publication by Karger are
subject to copy editing. Changes introduced by the copy
editor and/or questions will be marked in the manuscript
so please be sure to check the proofs against the manu-
script. The copy edited manuscript will be returned along
with the proofs.

Proofs
Unless indicated otherwise, proofs are sent to the cor-
responding author and should be returned with the least
possible delay. Alterations made in proofs, other than the
correction of printer's errors, are charged to the author.
No page proofs are supplied.

Reprints
An order form and a price list are sent with the proofs.
Orders submitted after the release of an article in print
are subject to considerably higher prices.

McGILL CYTOPATHOLOGY REVIEW COURSE

COURSE DIRECTOR: Manon Auger MD, FRCP(C)

This review course will include didactic lectures on all topics, followed by microscopic sessions during which the participants will have an opportunity to review a large number of teaching sets on individual microscopes. During the laboratory sessions, the participants will have an opportunity to discuss cytologic problems with the lecturer. Unknown cases will be used to stimulate discussion.
