Subject Index

Accurus 35, 83
Aflibercept, diabetic macular edema management 167, 168
Air-forced infusion, Stellaris PC 12, 13
Alcon Constellation, see Constellation system
Autoclave sterilization lens 89

Bausch & Lomb Stellaris PC, see Stellaris PC
Bevacizumab
diabetic macular edema management 167
pharmacovitrectomy adjuvant therapy 129–132
retinopathy of prematurity management 230
submacular hemorrhage surgery adjuvant 216–220

Binocular Indirect Ophthalmo Microscope 88, 115
Brilliant blue G, internal limiting membrane staining 122, 123

Cataract, see Intraocular lens, Nucleus drop/retained lens material
Chandellier, endoillumination 84, 88, 160
Chromovitrectomy
advantages in microincision vitrectomy surgery 123, 124
internal limiting membrane staining with vital dyes 122, 123
overview 120, 121
triamcinolone acetate staining of vitreous 121, 122
Closure, vitrectomy 74, 75
Colchicine, proliferative vitreoretinopathy management 193
Conjunctival sac, disinfection 68
Constellation system
aspiration systems 35
duty cycle control 4–6
high-speed cutting 1–3, 35
illumination 80–82
integrated laser and gas mixing 6
intraocular pressure control 6, 32
small-gauge vitrector probes 3, 4
27-gauge vitrectomy 60
UltraVit 35

Dexamethasone, diabetic macular edema management 167
Diabetic macular edema
classification 164, 165
medical therapies 165, 167, 168
optical coherence tomography 165, 166, 170
pathogenesis 164
vitrectomy
role in management 168
technique 168, 169
timing 169, 170
Diabetic retinopathy, see Proliferative diabetic retinopathy
Disinfection, vitrectomy
agents 65–67
conjunctival sac 68
eyelid skin 67, 68
surgical field 68–70
Duty cycle, equation 5
Endoillumination
brightness 83
chandellier 84, 88
Constellation system 80–82
Enhancing Visual Acuity system 26
overview 77, 78
prospects 85
requirements 83, 84
safety 78–82
Stellaris PC 14, 15

tissue visualization 84, 85

Endophthalmitis, microincision vitrectomy surgery complication 75

Endoscopic cyclophotocoagulation 115

Enhancing Visual Acuity System

accessories 28
combined procedures 27, 28
comparison with other systems 30
development 23, 24
duty cycle control 26
ergonomics 28
fluidics 24–26
foot pedal 28
high-speed cutting 26
illuminat 27
infusion control 27
laser 27
outcomes 28
prospects 29, 30
service and support 30
small-gauge instrumentation 26
training 29
23-gauge vitrectomy 43

Entry site alignment, Stellaris PC 10–12

Epiretinal membrane

indications for surgery 160, 162
internal limiting membrane peeling 160
overview 159
postoperative management 160, 161
prognostic factors after surgery 161, 162
removal 160
small incision techniques and advantages 35, 36
25-gauge vitrectomy 48
vitrectomy systems 160

Etoposide, proliferative vitreoretinopathy management 193

Eyelid skin, disinfection 67, 68

Flow rate, equation 3

Fluidics

aspiration fluidics and vitreous cutting 32, 33
efficiency concerns 34
Enhancing Visual Acuity system 24, 25, 28
infusion system 31, 32
phaco technique versus vitrectomy 34
Stellaris PC 12
23-gauge vitrectomy 42, 43

Venturi versus peristaltic pumps 33
vitrectomy dynamics 34
Fluorescein, vitreous staining 120

Giant retinal break

microincision vitrectomy surgery technique 183–186
suprachoroidal buckling management 142, 144
treatment overview 182, 183
25-gauge vitrectomy management 50

Hagen–Poiseuille law 3, 56

Hy potony, microincision vitrectomy surgery complication 75

Illumination, see Endoillumination

Incisions

closure 74, 75
oblique or angled incision 73, 74
stab or straight incision 72, 73

Indocyanine green, internal limiting membrane staining 120, 122

InnoVit 35

Internal limiting membrane

inverted peeling technique 154
staining 120, 122, 123

Intraocular gas, see Tamponade substances

Intraocular lens

dislocation 239–241
nucleus drop/retained lens material considerations 236, 237
phacovitrectomy 105

Intraocular pressure

time 6, 32
intraocular gas effects 96
perfluorocarbon liquid effects 93, 94

Length of traction, equation 1

Macular buckling, macular hole retinal detachment management 210

Macular edema, see Diabetic macular edema

Macular hole

classification 150, 151
complications of surgery 157
ocriplasmin studies 156, 157
photocoagulation 210
postoperative imaging 155
preoperative evaluation 151, 152
suprachoroidal buckling management 138–141
surgical technique
  core vitrectomy 152
  fluid-air exchange 153, 154
  internal limiting membrane peeling 153, 154
  posterior hyaloid separation 152
  wound construction 152
27-gauge vitrectomy 155, 156
Macular hole retinal detachment, management 208–210
Microincision vitrectomy surgery, see also specific indications and systems
  complications 75
  criticisms 55, 71
  globe fixation and site preparation 72
  historical perspective 54, 55
  incisions, see Incisions
  instrumentation 72
  tamponade, see Tamponade substances
Minocycline, proliferative vitreoretinopathy management 193
Myopic traction maculopathy
  macular hole retinal detachment 208–210
  myopic foveoschisis 204, 205
  overview 204
  suprachoroidal buckling management 138, 139, 145
vitrectomy
  complications 209, 210
  outcomes 207
  tamponade 210
  technique 205–207
Myringovitreoretinal blade 39
N-acetylcysteine, proliferative vitreoretinopathy management 194
Nucleus drop/retained lens material
  anterior segment management 235, 236
  complications 232
  incidence in cataract surgery 234
  intraocular lens
    dislocation 239–241
    placement decision 236, 237
  pars plana vitrectomy 237, 238
  risk factors 232
Ocriplasmin
  macular hole studies 156, 157
  vitreomacular adhesion syndrome treatment 127
Office-based vitrectomy, limitations 18, 19
Optical coherence tomography
  diabetic macular edema 165, 166, 170
  intraocular imaging 147–149
  macular hole 150–152
  macular hole retinal detachment 209
  myopic foveoschisis 204, 205, 207, 209
  postoperative imaging 155
Optical fiber-free intravitreal surgery system 88, 89
Perfluorocarbon liquids, see Tamponade substances
Phacovitrectomy
  complications 106
  overview 102, 103
  technique
    capsulorhexis 104
    corneal incision 104
    dilation 103
    intraocular lens 105
    phacoemulsification 104, 105
    sclerotomy 103, 104
    trocars 103
    vitrectomy 106
Pharmacovitrectomy
  adjuvant agents
    antiangiogenic agents 129
    triamcinolone acetate 132
  prospects 132, 133
  vitreolysis 126–129
Photon 1 light source 82, 84
Photon 2 light source 85
Povidone-iodine
  disinfection 65–69
  solution preparation 70
Prinomastat, proliferative vitreoretinopathy management 194
Proliferative diabetic retinopathy, vitrectomy
  complications 200
  difficult cases 200, 202
  overview 196, 197
  25-gauge vitrectomy 51
Proliferative vitreoretinopathy
  classification 190
etiology 188
natural history 189, 190
pathophysiology 188, 189
pharmacological treatment 193, 194
risk factors 189
surgical management
  goals 190, 191
  instrumentation 191, 192
  membrane removal 192
  peripheral cleaning 192
  posterior hyaloid membrane traction release 192
tamponade 192, 193
25-gauge vitrectomy management 50, 51
Pump, Venturi versus peristaltic pumps 33
Ranibizumab, diabetic macular edema
management 167
RESIGHT system 88, 89, 91
Retinal detachment, see also Macular hole retinal detachment,
postoperative care 180
proliferative vitreoretinopathy after surgery, see
Proliferative vitreoretinopathy
vitrectomy
  anesthesia and prepping 175, 176
  gas injection 180
  heavy liquid removal 179
  instrumentation 175
  overview 174
  pearls 180
  posterior vitreous detachment induction 177
  retina flattening 178, 179
  retinopexy 179
  sclerotomy closure 180
  technique 176
  25-gauge vitrectomy 49, 50
  vitreous shaving 177, 178
Retinopathy of prematurity
pathophysiology 223, 224
surgical management
  aggressive posterior disease and early surgery 225, 227, 228
  anti-VEGF therapy 230
  dye staining 231
  enzymatic vitreolysis 230
gauge selection for vitrectomy 225
  lens-sparing vitrectomy 224, 225
outcomes 224, 226, 227, 229
  principles 224
scleral buckling 224
  sclerotomy 225
steroid therapy 230, 231
tamponade 228, 230
  techniques 225
  viewing systems 225
Setup, vitrectomy 63–66
Silicone oil, see Tamponade substances
Stellaris PC
  controls and foot pedal 9, 10
  fluidics 12
  high-speed cutter 12–14
