Editorial Note

As in the case of the Stockholm congress, the lectures held at the 11th
Congress of the International Society of Blood Transfusion which took place in Sydney (Australia) from August 24-29, 1966, were again so numerous that they could not be published in one volume. However, while the proceedings of the Stockholm congress comprise five volumes, those of the Sydney congress are contained in the following four volumes:

Part 1: Blood Genetics and Physiology.
Haemolytic Disease of the Newborn.
Blood and Bone Marrow Preservation.

Those who had the privilege to attend the 11th Congress of the International Society of Blood Transfusion were greatly impressed by the flawless organization of this gathering which was arranged by the President of the Australian Society of Blood Transfusion, Dr. E. F. Thomson, and the Society’s Secretary, Dr. G. D. Archer. The editor of these proceedings is greatly indebted to both Dr. Thomson and Dr. Archer for their invaluable help in collecting and sorting the manuscripts as well as for their untiring assistance and additional advice at all stages of the publication work. The name of the Karger Publishing Company is a guaranty for a high standard of presentation and Mr. Thomas Karger and his collaborators have done their best to make these proceedings' volumes available to the readers within a useful period of time.
