Preface
This monograph by JOHN HOTCHIN represents an up-to-date review concerning persistent and slow virus infections. Included is a comprehensive bibliography of approximately 1200 references. The viruses capable of persisting within the infected host for long periods of time, sometimes for the life of the host, are heterogeneous in many respects, but there are important points of similarity. Their importance in a wide range of human and animal diseases is increasingly becoming recognized. It is not too much to conjecture that they may play a role in still other chronic degenerative diseases whose etiology is as yet unknown. Most appropriately the current status and future prospects of this fascinating and significant field are discussed in this volume by one of its pioneers, whose investigations, particularly in lymphocytic choriomeningitis, have contributed much toward moving the field forward and opening up new areas for its study.

As announced previously, suitable manuscripts in active areas of virus research for this series are welcomed by the editor. However, investigators who wish to submit material for a monograph are requested to make prior arrangements with the editor.

JOSEPH L. MELNICK

Acknowledgements

The author wishes to gratefully acknowledge the help he received from many friends during the complex and sometimes frustrating task of compiling and digesting the data for this monograph. Among others these include MARY CLARK, LOIS BENSON, DAGMAR MICHALOVA, ELIZABETH SEYMOUR, EDWARD SIKORA, WILLIAM KINCH, PEGGY and JENNIFER HOTCHIN. Drs. HUGH WEBB and CHARLES PFAU kindly read the LCM section, and specialized bibliographies were graciously supplied by Drs. M. C. CLARKE, R. L. CHANDLER, CARLETON GAJDUSEK, MARGRET GUDNADTTTIR, WILLIAM, JAMES B. HANSHAW, DONALD HARTER, J. H. LARSEN, I. H. PATTISON, RICHARD KIMBERLIN, NEVILLE STANLEY and HALLDOR THORMAR.

Contents

Introduction 1
Arenaviruses 2
Lymphocytic Choriomeningitis 2
Properties of LCM Virus 2
History 2
Nomenclature and Classification 3
Strain Differences 4
Physical and Chemical Properties 5
Contamination of Viruses with LCM 8
Tissue Culture 8
Titration Methods 10
Autointerference 11
Interference with Other Viruses 12
Acute Disease 13
Harmlessness of LCM 13
Clinical Manifestations 14
Man 14
Pathogenesis 15
The SC/IC Effect 18
Endotoxin Sensitivity 19
Skin and Foot Pad Reactions to LCM 19
Immune Responses to LCM 20
Humoral Immune Response 21
Complement-fixing Antibody 21
Neutralizing Antibody 21
Fluorescent Antibody 22
Cellular Immunity 24
Immunization 26
Persistent Tolerant Infection (PTI) 26
Tolerance Induction in the Perinatal Period 27
Congenital PTI 27
Neonatal PTI 29
LCM-induced Glomerulonephritis 36
Tolerance Breakage 40
Tolerance Induction in the Adult by Immune Suppressive Agents 43
X-irradiation 43
Chemical Immune Suppressants 44

VIII Contents

Thymectomy 46
Immune Suppressive Serum 47
High Dose Immunological Paralysis with LCM Virus 49
Lymphoreticular Lesions 51
The Interaction of LCM with Leukemia 55
Pathogenic Mechanisms of LCM Infection 57
Tacaribe-Machupo Group and Lassa Viruses 70
Miscellaneous Persistent Viruses 72
a) Heat 112
b) Formalin 113
c) Lipid Solvents 113
d) Ionizing and UV Radiation 113
e) Chemical Agents and pH 115
Fractionation and Purification Attempts 116
Electron Microscopy 118
Hypothesis on the Nature of the Scrapie Agent 118
The Genetic Concept of Scrapie 119
Growth in Tissue Culture 120
The Transmission of Scrapie 120
Strain Differences 120
Transmission in Sheep 121
Host Range 122
Incubation Period 123
Inoculation Routes 123
Accidental Transmission of Scrapie 123
Titration 125
Pathology 125
Pathogenesis 127
Biochemistry of Scrapie-infected Tissue 130
Immunity 132
Rida 133
Encephalopathy of Mink 133
