Diagnosis

D. G. Miller, New York, N.Y.: Preface 3

The Early Diagnosis of Cancer
D.G. Miller, New York, N.Y.

I. Introduction 5
II. Cancer 8
A. Oral Cavity and Pharynx 8
B. Larynx 10
C. Lung 10
D. Stomach 17
E. Colon 20
1. Testing for Occult Blood 22
2. Proctoscopy 23
F. Breast 26
1. Mammography 31
2. Survey Programs 31
G. Uterine Cervix 33
H. Body of the Uterus 39
I. Ovary 41
J. Kidney 43
K. Bladder 43
Xeroradiography of the Breast
J.N. Wolfe, Detroit, Mich.

I. Introduction 65
II. Historical Review 66
III. Xeroradiographic Process 67
A. Charging 68
B. X-Rays 68
C. Development 68
D. Image Characteristics 69
E. Radiographic Technique 71
F. Underexposure 72
G. Overexposure 72
IV. Clinical Application 73
V. Results 78
VI. Summary and Conclusions 81
References 81

Clinical Laboratory Aspects of Cancer
L. Stutzman, J.E. Fitzpatrick, T.M. Chu and E. J. Sarcione, Buffalo, N.Y.

I. Introduction 83
II. Hypercalcemia 84
A. Introduction 84
B. Hypercalcemia of Metastatic Bone Disease 84
C. Hypercalcemia in Cancer without Bone Lesions 85
D. Other Factors 86
E. Clinical Picture 87
F. Therapy of Hypercalcemia in the Cancer Patient 87
References 87
III. Alkaline Phosphatase 89
A. Introduction 89
B. Alkaline Phosphatase of Bone 90
C. Hepatic Alkaline Phosphatase 90
D. Placental Alkaline Phosphatase 91
E. Ectopic Alkaline Phosphatase of Tumors 91
References 92
IV. Ectopic Hormone Production in Malignant Disease 93
A. Introduction 93
B. Ectopic Gonadotropins 94
C. Ectopic Thyrotropins 95
D. Ectopic ACTH Syndrome 95
E. Ectopic Antidiuretic Hormone (ADH) 97
F. Ectopic Parathyroid Hormone 99
G. Other Ectopic Hormone Syndromes 99
References 99

Contents VII

V. Monoclonal Immunoglobulins in Malignant Disease 101
A. Introduction 101
B. Structure and Physiology of Antibody 101
C. Kinetics of Immunoglobulins 104
D. Laboratory Analysis 105
E. Clinical Application 107
F. Multiple Myeloma 108
G. Waldenstrom’s Macroglobulinemia 110
H. Heavy Chain Disease 110
References 111

VI. Carcinoembryonic Antigen (CEA) 113
A. Introduction 113
B. CEA in Colon Cancer and Other Malignancies 114
C. Prognostic Significance 114
D. Specificity 115
References 116

VII. Prostatic Acid Phosphatase 117
A. Activity in Disease of Prostate 117
B. Methodology 118
C. Prognostic Implications 119
References 119

VIII. Serum Copper and Zinc 120
A. Physiology of Copper 120
B. Clinical Application 120
C. Copper in Hodgkin’s Disease 121
D. Physiology of Zinc 121
E. Clinical Application 121

References 121

IX. Serum Calcitonin 122
A. Introduction 122
B. Medullary Carcinoma of Thyroid 123
C. Therapeutic Applications of Calcitonin 123
D. Other Tumors 123

References 124

X. -Fetoprotein (AFP) 125
A. Introduction 125
B. Detection Methods 126
   1. Double Immunodiffusion 126
   2. Countercurrent (Crossover) Immunoelectrophoresis 127
   3. Radial Immunodiffusion 127
   4. Electrophoresis in Antibody-Containing Media 128
   5. Radioimmunoassay 128
C. AFP in Primary Liver Cancer and Embryonal Cell Carcinoma 129
D. Specificity of AFP 129
E. Perspective for Future Usefulness 130

Treatment

Radiation Oncology
Morton M. Kligerman and Charles J. Sternhagen, Albuquerque, N. Mex. 135

Analysis of Recent Breast Cancer Treatment Studies

Introduction 184
Current Studies of Primary Therapy 185
Multicentricity of Origin 188
Screening and Detection 190
Endocrinological Treatment 192
Prophylactic Castration 193
Quantitative Kinetic Implications 194
Temporal Considerations 195
Biological Character of Post-Oophorectomy Recurrences 196
Suppressive Treatment of Recurrent and Metastatic Breast Cancer 197
Hormonal Treatment Study Method 198
I. Introduction 251
II. Immunotherapy as Treatment of Human Cancer 255
A. Passive Immunotherapy 256
1. Nonspecific 256
2. Specific 258
B. Adoptive Immunotherapy 259
1. Nonspecific 259
2. Specific 260
C. Active Immunotherapy 261
1. Nonspecific 262
2. Specific 266
D. Transfer Factor 267
E. Immune RNA 268
III. Conclusion 269

Prevention
Aetiological Factors in Human Cancer
I. Introduction 282
A. Descriptive Epidemiology of Cancer 282
B. Analytical Cancer Epidemiology 283
C. Aetiological Classification of Neoplasms 284
1. Type of Agent 284
   a) Physical; b) Chemical; c) Viral 284
2. Type of Exposure 284
   a) Cultural; b) Occupational; c) Iatrogenic cancers 284-285
3. Genetic Factors 285
II. Specific Cancer Sites 285
A. Lip, Oral Cavity and Pharynx 285
B. Salivary Gland 286
C. Nasopharynx 286
D. Oesophagus 287
E. Stomach 288
F. Colon and Rectum 288
G. Liver 289
H. Gallbladder and Extrahepatic Bile Passages 289
I. Pancreas 290

Main Editor’s Foreword X

Volume Editor’s Foreword XII

Chemical Carcinogenesis
B.L. Van Duuren, G. Witz and A. Sivak, New York, N.Y.

I. Introduction 2
II. Chemical Classification of Carcinogens 3
A. Direct-Acting Alkylating Compounds 3
   1. Nitrogen and Sulfur Mustards 4
   2. Ethyleneimines 6
   3. Sulfonic Acid Esters 7
   4. Epoxides 8
   5. Lactones 12
   6. Chloro Ethers and Related Compounds 13
   7. Sulfites and Sulfates 14
B. Indirect-Acting Agents 15
1. Aromatic Hydrocarbons and Heterocyclics 15
2. 4-Nitroquinoline N-oxide 17
3. Other Indirect-Acting Agents 19
C. Other Modes of Action 19
1. Carbamates 19
2. Natural Product Carcinogens 21
D. Inorganic Materials 23
1. Chromium 23
2. Nickel 23

Contents of Vol. 1 XIII

3. Arsenic 24
4. Beryllium 24
5. Asbestos 24
6. Iron 25
7. Other Inorganics 25
8. Mode of Action of Metal Carcinogens 25

III. Role of the Cell Membrane in Chemical Carcinogenesis 27
IV. Tissue Culture Systems for Carcinogenesis Studies 29
A. Introduction 29
B. Early Studies 30
C. Organ Culture 31
1. Lung and Trachea 32
2. Prostate Gland 33
3. Skin 35
D. Cell Culture Studies 35
1. Aromatic Hydrocarbons 36
2. Nitrosamines and Other Nitroso Carcinogens 39
3. 4-Nitroquinoline N-oxide 41
4. Direct-Acting Alkylating Agents 42
5. Other Agents 42
6. Tumor Promoters 43
E. Carcinogen Metabolism, Cytotoxicity and Binding 44
F. Problems and Prospects 46
1. Spontaneous Transformation 46
2. Markers in Cell Culture 47
3. Prospects 49
References 50

Naturally Occurring Carcinogens
I. Introduction 64
II. Mycotoxins and Other Microbial Products 65
A. Aflatoxins 65
1. Chemistry 66
2. Carcinogenic Properties of Aflatoxin B1 69
a) Carcinogenesis Experiments in Rats; b) Carcinogenesis in Other Species 70, 75
3. Structure-Activity Relationships 77
4. Implications for Man 79
B. Sterigmatocystin and Derivatives 82
C. Luteoskyrin and Islanditoxin 84
III. Cycasin 86
IV. Bracken Fern 88
V. Pyrrolizidine Alkaloids 91
VI. Other Plant Carcinogens 95
A. Safrole and Related Compounds 95

Contents of Vol. 1 XIV

B. Antithyroid Substances 96
C. Cyclopropene Fatty Acids 97
D. Compounds Active by Parenteral Routes 98
VII. Summary 98
References 99

Modifiers of Carcinogenesis

I. Introduction 111
II. Importance of Chemical Carcinogens for Man 112
III. Biological Modifiers 114
A. Species 114
B. Genetics 115
C. Sex 120
D. Hormonal Factors 121
E. Nutrition 122
F. Time-Age 124
G. Parasites 126
IV. Physical Modifiers of Carcinogenesis 127
A. Route of Administration 127
B. Solubility, Solvents, Suspending Media, etc 129
C. Dosage 132
D. Sequence and Frequency of Administration 138
E. Environmental Factors 138
V. Chemical Modifiers 139
A. Competitive Inhibitors 140
B. Enzyme Inducers 140
C. Inhibitors of Synthesis of Intracellular Constituents 142
D. Inhibitors of Cocarcinogens 143
E. Carcinogenesis Inhibitors with Unknown Modes of Action 143
VI. Discussion of Inhibitors of Chemical Carcinogenesis 143
References 145

Present Status of the Concept of Promoting Action
and Cocarcinogenesis in Skin
F. Stenbäck, H. Garcia and P. Shubik, Omaha, Nebr.

I. Introduction 156
A. Basic Concepts 157
II. Mechanism of Initiation 158
A. Biological Characteristics of Initiation 161
B. Initiation and Cell Metabolism 162
C. Morphology of Initiation 164
D. Initiating Agents 165

Contents of Vol. 1 XV

III. Mechanism of Promotion 167
A. Promotion and Cell Division 168
B. Immunological Aspects of Promotion 170
C. Morphological Changes in the Epidermis in Promotion 173
D. Dermal Alterations in Promotion 174
E. The Pilosebaceous Apparatus in Promotion 176
F. Tumor Types 178
G. Chemical Features of Croton Oil 183
H. Dipole-Type Substances 184
I. Other Promoting Agents 185
J. Tumor Progression in Skin Carcinogenesis 187
K. Dose-Response Relationship 188
L. Significance of Age, Sex, Strain and Species 189
M. Modification of the Two-Stage Concept of Skin Carcinogenesis 195
IV. General Aspects of Cocarcinogenesis 196
A. Viral Cocarcinogenesis 198
Some Aspects of Viral Oncogenesis
W.H. Kirsten and S.B. Panem, Chicago, Ill.

I. Introduction 226
II. RNA Tumor Viruses 228
A. Definition 228
B. Some Biologic Considerations 232
C. Structure 234
D. Composition 236
E. Antigens of Oncornaviruses 241
F. Replication 247
G. Transformation 254
H. Rescue of Oncornaviruses 260
I. Human Oncornaviruses 263

III. DNA Tumor Viruses: Papoviruses 267
A. Definition, Structure and Composition 267
B. Lytic Infection and Transformation 269
C. Persistence of Viral Information in Transformed Cells 276

IV. DNA Tumor Viruses: Herpesviruses 279
A. Definition, Structure and Composition 279
B. Epstein-Barr Virus (EBV) 282
C. Herpesvirus saimiri (HVS) 289
D. Marek’s Disease Virus (MDV) 291
E. Herpesvirus hominis, Type 2 (HVH-2) 293
F. Lucké’s Frog Adenocarcinoma 295

V. Concluding Remarks 296

Tumour-Specific Antigens
R.W. Baldwin, Nottingham

I. Introduction 335
II. Detection and Characterisation of Tumour-Specific Antigens 336
A. Transplantation Methods 336
B. Cellular Immunity to Tumour-Specific Antigens 337
  1. In vivo Methods 337
  2. In vitro Methods 338
C. Humoral Antibody Assay 340
1. Cytotoxic Tests 340
2. Cell Membrane Interactions 341

III. Occurrence and Specificity of Tumour-Specific Antigens 342
A. Carcinogen-Induced Tumours 342
B. Virus-Induced Tumours 347
C. Human Tumours 350
1. Burkitt’s Lymphoma 350
2. Acute Leukaemia 351
3. Malignant Melanoma 352
4. Neuroblastoma 353
5. Sarcomas 354
6. Epithelial Tumours 355

IV. Nature of Tumour-Specific Rejection Antigens 356

V. Immunological Phenomena in Oncogenesis 359
A. Tumour-Specific Antigens as Expressions of Neoplastic Change 359
B. Significance of Human Tumour Antigens 360
C. Immunosurveillance and Cancer 361
D. Immunosuppression 364

VI. Immunotherapy of Tumours 365
A. Active Immunisation 366
B. Nonspecific Stimulation of the Immune Response 369
C. Adoptive Immunotherapy 370
D. Humoral Antibody 372
