Editorial Introduction

During the last 25 years diagnostic radiology in oto-rhino-laryngology has played an increasing part in radiology as a result of advances in technology. The last 10-15 years have brought a growing amount of papers on radiology in oto-rhino-laryngology and at the same time otoradiology has been a subspeciality in radiology.

It is the editorial committee's hope that these series will give people all over the world with interests in this field of radiology - otologists, otoradiologists as well as general radiologists - a possibility to find new things of interest and to get informations about the development in different centres of otoradiology.

I will like to thank all my friends in the editional committee, all pioneers in otoradiology for their interest in cooperating in these new series.

I also want to thank the authors for their contributions and the publisher for his encouragement and support during the preparations producing this first volume.

Spring, 1973 S. BRNNER
