Contents

Preface

I. CELLULAR LEVEL: REGULATORY ASPECTS

Growth and Differentiation of Mouse Epidermal Cells in Culture: Effects of Extracellular Calcium
H. HENNINGS, K. HOLBROOK, P. STEINERT, and S. YUSPA ............ 3

Keratinization of Human Keratinocytes in Cell Culture:
The Effect of Cyclic AMP
Y. KITANO and N. OKADA ........................................... 27
Cyclic GMP System in the Epidermis
Kenji ADACHI, Takashi AOYAGI, Hajime IIZUKA,
Kenneth M. HALPRIN, and Victor LEVINE ......................... 39

The Localization of Cyclic Nucleotides in the Human
Epidermis: An Immunohistochemical Study
Toshihiro MIZUMOTO and Akira OHKAWARA ...................... 67

Platelet-Dependent Serum Factor That Stimulates the
Proliferation of Epidermal Cells In Vitro
Kazuo Aso, Shigeo KONDO, and Michiko AMANO ................. 83

Tissue Culture of Epidermal Cells in Some Acantholytic
Dermatoses
Yasumasa ISHIBASHI, Fujio OHTSUKA, and Atsushi KUKITA........... 91

Localization of the Defect in Skin Diseases Analyzed in the
Human Skin Graft-Nude Mouse Model
Robert A. BRIGGAMAN ........................................ 115

Cytochemical Studies of Nuclear DNA and RNA in Normal
and Abnormal Keratinizing Tissues
Hiroyuki SUZUKI, Mineko HIRANO, and Shunichi BABA ............ 127

II. CELLULAR LEVEL: ENVIRONMENTAL ASPECTS

Effect of Chemical Modification of KeratinoCytes and
Collagen on Keratinocyte-Collagen Interactions
Marvin A. KARASEK ............. 143

vi CONTENTS

Basal Lamina Formation by Epidermal Cells in Cell Culture
Takae HIRONE and Shigeru TANIGUCm ......................... 159

Chemical Carcinogenesis Studies in Mouse Epidermal
Cell Cultures
Stuart H. YUSPA, Ulrike LICHTI, David MORGAN, and
Henry HENNINGS ............................................ 171

Multistage Chemical Carcinogenesis in Mouse Skin
A Trial of a Method to Trace Metabolic Pathways of Nucleic Acids in Keratinocytes
Kiyoshi TODA, Shigeaki SHONO, and Makoto IMURA .............. 219

Quantitative Autoradiographic Studies on RNA and Protein Synthesis of Dyskeratotic Cells in Morbus Darier
A. SATO, M. SEIJI, and S. MASU .................. 227

III. MOLECULAR LEVEL: FUNCTIONAL ASPECTS

New Findings on Epidermal Transglutaminase Substrates
Me10die M. BUXMAN and Cinda J. LOBITZ .................... 245

The Synthesis of the Cystine-Rich Proteins in Rat Epidermis:
I. Analysis by [35S] Cystine Incorporation
Tadashi TEZUKA and Reiko HIRAI ...................... 255

Lipid Peroxide of Human Skin
Muneo OHKIDO, Kazuhiro YOSHINO, and Itsuro MATSUO ..... 269

High-Pressure Liquid Chromatography of Free Nucleotide Patterns in Normal and Abnormal Keratinocytes
Ryohei OGURA, Shuji KUMANO, Tadasu MATSUZAKI, and Toshiro SAKATA ............... 279

Control of Epidermal and Hair Root Protein Synthesis
Irwin M. FREEDBERG, Peter E. M. GIBBS, and Mary E. GILMARTIN ....................... 295

Stratum Corneum Basic Protein: An Interfilamentous Matrix Protein of Epidermal Keratin
Beverly A. DALE, John D. LONSDALE-EcCLES, and Karen A. HOLBROOK .................. 311

Keratins in Cultivated Human Keratinocytes Are Stable
Joseph MCGUIRE, Leonard MILSTONE, Michael OSBER, and Lynn INGALLS ................... 327

CONTENTS vii
IV. MOLECULAR LEVEL: STRUCTURAL ASPECTS
Structure of Epidermal Keratin and Variations in Its
Polypeptide Composition
Howard P. BADEN ............................................ 345

The Structure of Filaments of Normal and Psoriatic Horny Cells
A. Gedeon MATOLTSY, Patricia J. CUFFEL, and
Margit N. MATOLTSY ............................................ 365

Characteristics of Fibrous Protein and the Disulphide
Cross-Linking Bond in Human Stratum Corneum
Michihiro HATTORI and Hideoki OGAWA ....................... 379

Structural Changes of Human Epidermal \( \alpha \)-Keratin in Disorders
of Keratinization
Peter M. STEINERT, Gary L. PECK, and William W. IDLER .......... 391

Effects of Trace Elements in Polymerization of Keratin Proteins
and Destruction of the Filaments by Processing Techniques for
Electron Microscopy
Kimie FUKUYAMA, Sinfu TZENG, Masahiro SAKAMOTO, and
William L. EPSTEIN ........................................... 407

Molecular Markers of Differentiation in the Epidermis of the
Newborn Rat
I. A. BERNSTEIN, R. K. BRABEC, B. VADLAMUDI,
A. K. OHNO, L. W. DELAP, and R. H. GRAY ..................... 421

Index .......................................................... 433

Preface

Epidermal keratinization is a fundamental biological process occurring
in the skin and is one of the most important fields to be studied in dermatology.
The molecular events in the differentiation of the mammalian epidermis
are now being clarified with recent advances in tissue culture, biochemistry,
and immunology. Such information provides insight into the
causes of certain cutaneous pathologies involving abnormalities in epidermal
differentiation including skin cancer.
The Japan-U.S. Seminar, "Biochemistry of Cutaneous Epidermal
Differentiation," was held in 1976 in Sendai, Japan, under the joint sponsorship
of the Japan Society for the Promotion of Science and the National Science Foundation of the United States. This symposium was motivated by the growing need for active investigation in the area of epidermal biochemistry to familiarize the participants with rapidly accumulating knowledge from many and varied disciplines. Interactions at the seminar not only led to clarification of concepts, reorientation of investigative directions, and surfacing of new ideas, but also produced new collaborative efforts among those present. The entire proceedings, including the discussions following the papers, were compiled as a monograph entitled "Biochemistry of Cutaneous Epidermal Differentiation," edited by M. Seiji and I. A. Bernstein and published by the University of Tokyo Press in 1977. This publication appears to have extended the impact of the meeting to scientists who were not in attendance.

In the past three years, considerable progress has been made on structural and functional aspects of mammalian epidermal differentiation, many of which were mentioned as problems to be solved or as subjects to be investigated in 1976. It was therefore necessary to hold another meeting similar to the previous seminar in order to provide those attending with answers to many of the questions raised in the previous seminar and with significant new information.

The U.S.-Japan Seminar, "Biochemistry of Normal and Abnormal Epidermal Differentiation," was held in the United States at the Boyne Mountain Lodge, Boyne Falls, Michigan, 29 July through 2 August 1979, under the joint sponsorship of the National Science Foundation of the United States and the Japan Society for the Promotion of Science. The editors sincerely hope that the publication of this book containing the papers and discussions of the Seminar will be another steppingstone toward our goal of promoting further interaction among scientists interested in this important subject: epidermal keratinization.
