Drug Dosage

The author and publisher have exerted every effort to ensure that drug selection and dosage set forth in this text are in accord with current recommendations and practice at the time of publication. However, in view of ongoing research, changes in government regulations, and the constant flow of information relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any change in indications and dosage and for added warnings and precautions. This is particularly important when the recommended agent is a new and/or infrequently employed drug.

Forword

The 16th Annual San Francisco Cancer Symposium was entitled 'Childhood Cancer: Triumph over Tragedy'. In years past, but with few exceptions, children with cancer died, and the parents were emotionally maimed. Today, through the joint efforts of the oncological specialists - surgical, radiation and medical - children formerly doomed are alive and free of cancer. The foremost oncologic specialists in the world gathered in San Francisco on March 13 and 14, 1981, to update and share their experience with health professionals. The symposium was generously supported by the California Division of the American Cancer Society, Varian Associates, Ross Laboratories, Adria Laboratories, Atomic Energy of Canada Ltd., and Siemens Corporation.
