Acknowledgements

Special thanks are due to Professor Georg Hörmann, M.D., for his constant support and encouragement. He gave me the benefit of his great clinical knowledge, thus enabling me to examine the present operation material critically with respect to the indications. I thank Dipl.-Phys. Jürgen Pachaly for his help in familiarizing me with electronic data processing. The present study was only possible with the help of the head physicians of 17 West Berlin gynecological departments.
I am most grateful to them for agreeing that the surgical results of their departments be included in this study. I wish to thank Dipl.-Biol. D.J. Williams, B.Sc., for his excellent cooperation in preparing the translation into English. I also wish to express my sincere appreciation and gratitude to Professor Paul J. Keller, M.D., for his valuable suggestions in the final shaping of the manuscript.

Dedicated in grateful appreciation to Professor Georg Hörmann, M.D., on the occasion of his 65th birthday.

Introduction

Extensive pre- and postoperative care and modern anesthetic procedures have also resulted in a widening of the range of indication for gynecologic operations for elderly patients today. This has been underscored by numerous studies dealing with surgical geriatric gynecology, most of them published in recent years. This tendency will undoubtedly continue in future years. For this reason, we consider it valuable to carry out a systematization of existing data and to compare them with our own material.

Our survey commences with a general chapter presenting individual problems of geriatric gynecology and pointing out possibilities for future clinical research. Furthermore, references about surgical geriatric gynecology are compared. The special chapter contains an analysis of material obtained from 17 West Berlin gynecological departments with special consideration of postoperative mortality. Our own previous reports on surgical geriatric gynecology constitute an integral part of this study, but are only mentioned in appropriately placed marginal notes.
