Imfeld, Thomas N.
Identification of low caries risk dietary components
(Monographs in oral science; v. 11)
1. Dental Caries - etiology 2. Diet, Cariogenic
I. Title II. Series
W1 M0568E v. 11 (WU 270 132)
ISBN 3-8055-3634-8

Drug Dosage
4.1. Assessing Normal Conditions of Consumption 49
4.2. Measuring Plaque pH with Indwelling Electrodes 50
   4.2.1. Position of Indwelling Electrodes 50
   4.2.2. Plaque Covering Glass Electrodes 54
   4.2.3. Some Typical Patterns of Plaque pH 61
   4.2.4. Age of Plaque and pH Values 63
   4.2.5. Concentration of Available Substrate and Plaque pH 65
   4.2.6. Oral Clearance of Fermentable Carbohydrates 68
4.3. Measuring pH of Oral Fluid with Indwelling Electrodes 68
   4.3.1. Influence of the Tongue’s Microflora on the pH of Oral Fluid 69
   4.3.2. Influence of Dietary Acids on the pH of Oral Fluid 71
4.4. Differences between Plaque pH and pH of Oral Fluid after Dietary
     Intake 77
4.5. Reproducibility and Representativity of Results 78
   4.5.1. Reproducibility 78
   4.5.2. Representativity of the Test Panel 82
   4.5.3. Comparability of Results of Plaque pH Telemetry and Caries Experiments
          in Rats and Man 83

7. Sugar-Based and Sugar-Substituted Pharmaceutical and Related Products .. 142
   7.1. Sugar-Containing Pharmaceutical and Related Products 142
      7.1.1. Sugar Content 142
      7.1.2. Cough Syrups 143
      7.1.3. Cough Drops, Throat Lozenges, and Breath Fresheners 145
      7.1.4. Vitamin and Health Preparations 149
      7.1.5. Miscellaneous 156
   7.2. Sugar-Substituted Pharmaceutical and Related Products 158
Acknowledgements

I should like to take this opportunity to thank all those who have helped me at various stages of my research.
First of all, I want to express my sincere gratitude to my esteemed teacher, Prof. Dr. med. H.R. Mühlemann. I am deeply indebted to his constant encouragement, his illuminating suggestions and his furthering of my project by his invaluable criticism. He not only provided me with excellent research facilities, but has been a great incentive to me by his own exemplary commitment to dental research.
My thanks are further due to Prof. Dr. sc.techn. B. Guggenheim for his insightful criticism and for generously allowing me to profit from the expert help of his assistants for scanning electron microscopy.
I also wish to thank Dr. A. Firestone, DDS, for his patient reading and valuable correction of the manuscript, as well as Mrs. A. Köhli for her conscientious preparation of the final script, and Miss L. Brandenberger for providing exact photographic material.
I am grateful to the volunteers and staff of the Bioelectronic Unit for their steady cooperation; I should like to thank especially Mr. T. Reich, El. Ing. HTL, without whose skills in electronics my investigations would not have been possible.
