Drug Dosage
The authors and the publisher have exerted every effort to ensure that drug selection and dosage set forth in this text are in accord with current recommendations and practice at the time of publication. However, in view of ongoing research, changes in government regulations, and the constant flow of information relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any change in indications and dosage and for added warnings and precautions. This is particularly important when the recommended agent is a new and/or infrequently employed drug.

Contents
Carcinoma of the Larynx. Growth, p-Classification and Grading of Squamous Cell Carcinoma of the Vocal Cords
Hiltrud K. Glanz, Marburg ................................................................. 1

Preface. ......................................................................................... 2
Introduction: Aims of the Study .................................................... 3
Material and Methods .................................................................... 4
Clinical Data .................................................................................. 4
Laboratory Techniques ................................................................. 5
Results Concerning Spread and Growth of Vocal Cord Carcinomas 6
Different Types with Similar Patterns of Growth: Subglottic, Ventricle and Transglottic Carcinomas ................................................................. 80
TNM and p-Classification ........................................................................ 84
Pathohistological Grade of Malignancy in Vocal Cord Carcinomas .......... 88
Review of Literature .............................................................................. 88
Histologic Evaluation of Malignancy (Malignancy Index, Grading) ............. 90
Malignancy Index of Vocal Cord Carcinomas ............................................ 102
Final Evaluation of pT-Classification and Malignancy Index (Histomorphological Grading) ................................................................. 108
Summary ................................................................................................. 111
Acknowledgements .................................................................................. 113
References ................................................................................................ 113

Facial Nerve Disorders: Anatomical, Histological and Clinical Aspects
Mihael Podvinec, Basel ........................................................................... 124

Introduction ............................................................................................... 125
Intraneural Anatomy of the Facial Nerve .................................................. 126
Review of the Literature .......................................................................... 126
Our Own Findings ..................................................................................... 128
Materials and Methods ............................................................................ 128
Results ........................................................................................................ 129
Discussion .................................................................................................. 136
Surgical Treatment of Hyperkinetic Disorders

Clinical Observations

Aetiology of Hemifacial Spasm

Aetiology of Blepharospasm

Review of Therapeutic Methods

Our Method of Selective Funicular Neurolysis (Pfaltz-Podvinec)

Surgical Technique

Long-Term Results

Discussion

Conclusions

Morphological, Experimental and Clinical Observations on the Normal Facial Nerve and in Facial Pathology

Anatomical and Morphological Observations

Observations in Animal Experiments and in Humans

Autopic Material

Neurometric Studies of the Normal Facial Nerve

Our Own Findings

Material and Methods

Review of Cases

Results
