Preface

The Bodensee Symposia on Microcirculation have been initiated in
1982 as an interdisciplinary forum to review and to discuss very recent
findings from specific fields of clinical and experimental research in microcirculation.
The 2nd Bodensee Symposium was held in Konstanz/Bodensee, July 1-3, 1983 on “Vasomotion and Quantitative Capillaroscopy”. This third volume of “Progress in Applied Microcirculation” contains the introductory papers as well as the summaries of the discussions.

The 2nd Bodensee Symposium on Microcirculation was realized with the generous help of Dr. E. O. Wiethoff, M. D. and Mr. K.-D. Reusch from Deutsche Abbott GmbH, Wiesbaden/FRG to whom the organizers are greatly indebted. We particularly appreciated the excellent secretarial help provided by Mrs. Elfriede Haussmann, Munich and Miss Erika Schäfer, Heidelberg and we wish to thank the editorial staff of S. Karger for their great assistance in preparation of this volume.
