Drug Dosage
The authors and the publisher have exerted every effort to ensure that drug selection and dosage set forth in this text are in accord with current recommendations and practice at the time of publication. However, in view of ongoing
research, changes in government regulations, and the constant flow of information relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any change in indications and dosage and for added warnings and precautions. This is particularly important when the recommended agent is a new and/or infrequently employed drug.

Contents

Antiviral Chemotherapy........................................1

I. Introduction........................................1
II. Strategy for Development of Antiviral Agents.................................2
III. Clinical Application of Antiviral Chemotherapy..............................5
   A. Route of Administration........................................5
   B. Drug-Resistant Mutants........................................6
   C. Clinical Priorities........................................6
   D. Antibacterial Chemotherapy....................................7
IV. Interferons........................................9
   A. Overview........................................9
   B. Assay of Interferon..........................................12
   C. Induction and Regulation of Interferon Production..................13
      1. Priming........................................14
      2. Hyporesponsiveness....................................14
      3. Superinduction........................................14
      4. Gamma Interferon (IFN-?).................................15
   D. Production of Interferon....................................15
      1. Leukocyte Interferon (LeIFN)..............................15
      2. Lymphoblastoid Interferon.................................15
      3. Fibroblast Interferon (F-IFN)..............................16
