Drug Dosage
The authors and the publisher have exerted every effort to ensure that drug selection and dosage set forth in this text are in accord with current recommendations and practice at the time of publication. However, in view of ongoing research, changes in government regulations, and the constant flow of information relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any change in indications and dosage and for added warnings and precautions. This is particularly important when the recommended agent is a new and/or infrequently employed drug.

Acknowledgements

A book such as this, wherein many authors make contributions to a
central theme, has proved to be time-consuming, difficult and rewarding.
Success of such a venture is determined by the cooperation and expertise
of the contributors, to whom the editor extends his sincere thanks.
Some data from previous Olympic studies were made available to the
authors of several chapters for further analysis. Special thanks are due to
Dr. Alfonso L. de Garay, Mexico City, Dr. Georges Larivire, Montreal,
and Dr. James M. Tanner, London, for their cooperation in this regard.
In addition, appreciation is extended to colleagues and assistants who ably
and diligently assisted in collection of the data at the various Olympics.
The editor is most grateful to his colleagues Dr. Harry A. King and Dr.
Ralph M. Grawunder for advice on some chapters, as well as to Dr. B.
Robert Carlson, Chairman of the Department of Physical Education, and
to the San Diego State University Foundation for their support. The
counsel provided by Dr. William D. Ross, Burnaby, and Dr. Marcel
Hebbelinck, Brussels, during the preparation of both volumes of Physical
Structure of Olympic Athletes was most welcome.
The editor expresses his gratitude to Deborah Crozier and Dava
Reeder for their assistance in preparation of the manuscripts, and to Mario
Tamayo for his artwork.
