The Developing Brain and Its Disorders

Fourth International Symposium on Developmental Disabilities organized by
The Japanese Society of Child Neurology

Organizing Committee
Chairman Masataka Arima
Secretary Yoshiyuki Suzuki
Treasurer Kihei Maekawa
Members Yukio Fukuyama
Kiyoshi Hashimoto
Shigehiko Kamoshita
Komei Kumagai
Chikaya Ohtsuka
Morimi Shimada
Hyakuji Yabuuchi

Supporting Organizations
International Child Neurology Association
Ministry of Health and Welfare, Japan
Japan Medical Association
The Commemorative Association for
the Japan World Exposition
Japan Brain Foundation

Proceedings of the 4th International Symposium on Development Disabilities,
'Biological Aspects in the Pathogenesis of Developmental Disabilities' November
3-5, 1983, Tokyo

The
Developing Brain
and Its Disorders

Editors

KARGER

Drug Dosage
The authors and publishers have exerted every effort to ensure that drug selection and dosage set forth in this text are in accord with current recommendations and practice at the time of publication.
However, in view of ongoing research, changes in government regulations, and the constant flow of information relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any change in indications and dosage and for added warnings and precautions. This is particularly important when the recommended agent is a new and/or infrequently employed drug.

ISBN 3-8055-4010-8

Contents
I. MORPHOGENESIS OF THE CENTRAL NERVOUS SYSTEM AND ITS ABERRATIONS

Early Human Neocorticogenesis
J.-C. Larroche and L. Jardin .......... 3

Brain Malformations: The Problems
M.G. Norman and S.K. Ludwin .......... 15

The Spectrum of Neural Tube Defects of the Caudal Spine in Infants
R.J. Lemire and J.B. Beckwith .......... 29

Cellular Patterns in Developmental Malformations of Neocortex: Neuron-Glial Interactions
V.S. Caviness and R.S. Williams .......... 43

Chimeric Analysis of Pathogenesis of Reeler and Shiverer Mutant Mice
K. Mikoshiba, M. Yokoyama, T. Terashima, Y. Nishimura,
K. Takamatsu, Y. Inoue, T. Nomura, and Y. Tsukada .......... 69

II. BIOCHEMICAL APPROACHES TO DIAGNOSIS AND PATHOGENESIS OF DEVELOPMENTAL DISABILITIES

Relation of Cholesterol to Glial Differentiation
J.J. Volpe ............ 95

Biochemical Approaches to the Early Diagnosis and Prevention of Genetic Disease
H. Galjaard .......... 113

"Authentic Animal Models" for Biochemical Studies of Human Genetic Diseases
K. Suzuki .......... 129

Secondarily Induced Lysosomal Abnormalities in Mucopolysaccharidoses
J.A. Kint .......... 139

Heterogeneity in I-cell Disease (Mucolipidosis II)

S.Okada, T. Kato, T. Yutaka, M. Midorikawa, M. Dohke,
T. Ohshima, and H. Yabuuchi .......... 151

Galactosialidosis: A Comparative Study of Clinical and Biochemical Data on 22 Patients
Y. Suzuki, H. Sakuraba, T. Yamanaka, Y. - M. Ko,
Y. Timori, Y. Okamura, and A. T. Hoogeveen .......... 161
Connatal Adrenoleukodystrophy
P. G. Procopis .......... 17

III. GENETIC AND ENVIRONMENTAL FACTORS IN THE PATHOGENESIS OF MENTAL RETARDATION

Growth and Development in Chromosomal Abnormalities
M. Higurashi, S. Iijima, K. Takadaya, and N. Kobayashi .......... 185
Aspects of Dysmorphic Features and Stereotypic Movements in Mental Retardation
O. Eeg-Olofsson .......... 197
Population Aspects of Marker X-linked Mental Retardation
D. S. Herbst .......... 201
Neurofibromatosis as a Model for Investigating Hereditary vs. Environmental Factors in Learning Disabilities
V. M. Riccardi .......... 211
Two Teratogens of Major Importance: Alcohol and Anticonvulsants
F. Majewski .......... 223
Children of Adolescent Mothers: Neurological and Developmental Sequelae
K. Haka-Ikse'..........247

IV. EARLY BRAIN DAMAGE: ITS SEQUELAE AND OUTCOME

Perinatal Hemodynamic Events and Neurologic Development
H.C. Lou .......... 259
Neurophysiology of Neonates and Sequelae of Early Brain Damage
K. Watanabe, K. Inokuma, T. Takeuchi, and K. Aso .......... 265
Early Nutrition and Brain Development
G.E. Gaull .......... 279
Factors Modifying the Incidence and Phenotypic Expressions of Mental Retardation and Structural Anomalies: Medical, Social, and Biological Considerations
Closing Remarks
Y. Fukuyama .......... 313

Foreword

The fourth International Symposium on Developmental Disabilities was held in Tokyo on November 3-5, 1983, under the sponsorship of The Japanese Society of Child Neurology. Previous Symposia were held in 1976, 1978, and 1981, all in Tokyo. The primary object of these Symposia was to discuss and exchange
fresh ideas on the diagnosis, classification, treatment, and prevention of motor disturbance, mental retardation, speech problems, behavioral problems, and convulsive disorders in childhood—the most common clinical problems for child neurologists and extremely serious problems for the affected children and their parents and teachers.

At the 1981 Symposium, psychiatrists, parents, educational experts and child neurologists met and exchanged opinions on early detection and early intervention, as well as practical methods of how to care for affected children. But to cure the children with developmental disabilities, and (even more important) to prevent their occurrence, measures based on scientific investigation will need to be developed. The fourth Symposium consequently focused on biological aspects in the pathogenesis of developmental disabilities as the main theme.

The development of the brain and its disorders can be studied at the molecular level, the cell level, the tissue or organ level, and the level of the human being not only as a living individual but also as a member of society. In order to discuss the factors influencing brain development in their various aspects, distinguished guest speakers from every field were invited. The Symposium and the publication of these Proceedings were made possible by the cooperation of the participants and the sponsoring organizations. We would like to express our deep gratitude to the International Child Neurology Association, the Ministry of Health and Welfare of Japan, the Japan Medical Association, The Commemorative Association for the Japan World Exposition, and the Japan Brain Foundation, for supporting this Symposium and publication.
