Cover illustration
Photomicrograph of normal peripheral blood (small cells) which form conjugates with the human NC tumor target BT-20 (human breast carcinoma). These cells are stained with Wrights Giemsa and show intimate association between the tumor and PBL. Photomicrograph provided through the courtesy of Drs. Antonella Stoppacciaro and Edmund C. Lat-tome, Laboratory of Cellular Immunology, Sloan-Kettering Cancer Center, New York, NY, USA.

Library of Congress Cataloging-in-Publication Data
Immunomodulation of neoplasia.
(Progress in experimental tumor research; vol. 32)
Includes bibliographies and index.
ISBN 3-8055-4595-9

Bibliographic Indices
This publication is listed in bibliographic services, including Current Contents® and Index Medicus.

Drug Dosage
The authors and the publisher have exerted every effort to ensure that drug selection and dosage set forth in this text are in accord with current recommendations and practice at the time of publication.
However, in view of ongoing research, changes in government regulations, and the constant flow of information relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any change in indications and dosage and for added warnings and precautions. This is particularly important when the recommended agent is a new and/or infrequently employed drug.
